## BRING YOUR COMPUTER TO LIFE

WORD PROCESSING AND REAL PRINTING  
TIMEX/SINCLAIR TS1000, TS1500, OR ZX81

### PROFESSIONAL WORD PROCESSING AND PRINTING FOR LESS THAN THE COST OF A TYPEWRITER

**\$79.95**

#### **X-WORD ZX-101 WORD-PROCESSING**

- 16K ROM Software
- Full RS232 Interface
- Word Star like commands
- On-line edit to 14K with 16K RAM pack.
- Total cursor control, move, delete, etc.
- Upper or lower case ASC II character
- Automatic paragraph reformatting

**\$250.00**

#### **PRINTER GORILLA/BANANA**

- 10" Carriage
- 5 X 7 Dot Matrix
- 50 Characters per sec
- 5 or 10 Characters per in
- Tractor Feed

Now for a limited time Data-Assette offers three choices to obtain these powerful solutions:

#### **OPTION #1 = \$299**

Ready to run package

- Printer
- X-Word System
- Paper Supply
- All cables

Real Cost \$370.00

Your Savings \$71

#### **OPTION #2 = \$399**

Option #1 plus

- TS1000 (2K) new
- Overlay Keyboard
- 16K of Ram Pack

Real Cost \$480.00

Your Savings \$81

#### **OPTION #3 = \$499**

Option #1 plus

- TS1000 (2K) new
- Fullsize Keyboard
- 32K of RAM pack

Real Cost \$595.00

Your Savings \$96

ORDER TODAY BY PHONE FROM OUR SPECIAL 800 NUMBER OR MAIL IN YOUR CHOICE.  
WE ACCEPT VISA OR MASTERCARD.

### **DATA-ASSETTE**

All orders are subject to a \$4.95 handling/shipping charge

Mail Order Department  
56 South 3rd Street  
Oxford, PA 19363

(800) 523-2909  
(215) 932-4807 in PA

\*If you already own a printer then X-word is available for \$79.95. If you only need the printer then its cost is \$250.00. Send \$2.50 for our full catalogue and receive \$2.50 credit on first purchase.

CIRCLE 21 ON READER SERVICE CARD

# The Direct Connection is Here . . .

. . . for your Timex-Sinclair computer. Memotech can now connect you to CompuServe with our new modem package. With this introductory offer you get a 300 Baud J-Cat Modem by Novation. . . RS232 serial interface with built-in communications software and all connecting cables. PLUS, you get a CompuServe Demopak, password, I.D. and log on/off procedures for a free two hour demonstration of the CompuServe Information Service.

Memotech, the leader in add-on Timex products, introduces the modem package for only \$199.95 + \$6.95 shipping/handling. (Suggested value \$290.00).

Simply plug in our direct connect add-on products to the back of your Timex computer. The Memopak 16K sells for \$49.95 \* . . . 32K Memopak is \$99.95 \* and our best seller 64K Memopak is \$149.95 \*.

The Memotech keyboard is priced at \$99.95 \*. The Centronics parallel interface sells for \$74.95 \* including software, and the RS232 interfaces are \$99.95 \*. Printer packages are also low, low priced.

Order at no risk (10 day money-back guarantee); Call 1-800-662-0949 (Colorado 1-303-986-1516). Or send your name, address, phone number and a check/money order/Visa or MasterCard number with expiration date to:

**Memotech Direct Sales Division**  
7550 W. Yale Avenue, Denver, Colorado 80227

\* Shipping/Handling \$4.95; Colorado Residents add applicable sales tax.

# Join the Click!

NOT JUST A KEYBOARD REPLACEMENT  
BUT AN ENHANCEMENT THAT GIVES  
KEYBOARD FEATURES FOUND ONLY  
ON MORE EXPENSIVE COMPUTERS.

## FOR FASTER & EASIER DATA ENTRY WITH YOUR E-Z KEYBOARD . . .

Here at last, is a large 60 key "TACTILE FEEL" keyboard that plugs into the same connectors as the existing keyboard on your ZX81, TIMEX/SINCLAIR 1000 or 1500. **HERE THE CLICK . . . FEEL THE SNAP!** for every key pressed (tactile feedback)

### IT'S THE ONLY KEYBOARD WITH ALL OF THESE FEATURES:

- 60 moving keys: solid (not rubber)
- Legends in three colors on the base (color coded by key function)
- Molded legends on keytops (no stickers)
- 8 automatic shift keys (no shifting required) for edit, delete, single & double quotes, colon, semi-colon, function and stop
- 2 shift keys
- Numeric keypad
- 5" space bar
- No wiring required (Just plug in)  
Cables and instructions are included

A custom designed aluminum enclosure (shown above) is available for your E-Z Key keyboard.

Measurements:	Price:
EC-11 (11" X 9" X 3.5")	24.95
EC-14 (14" X 9" X 3.5")	29.95
JOYSTICK:	29.95

A joystick kit that requires no wiring and functions like the arrow keys and 0 on your computer. Plugs into E-Z Key 60 keyboard.

**SWITCH SPECIFICATIONS:**  
Keytops measure 0.4" by 0.3" spaced at 3/4" intervals between keys. Life equals 10 million operations (typical). Force equals three ounces. Domeswitch, button type with arm to give extended travel.

# \$84.95

90 day warranty

Take advantage of this introductory offer . . .  
**\$10 OFF THE PURCHASE OF A JOYSTICK  
WHEN YOU BUY THE KEYBOARD & ENCLOSURE**  
(Prior purchasers will be honored for Joystick discount)

Try it, you'll like it—10 day return privilege on keyboard enclosures and keyboard in stock.

# letters

## Payroll

Dear Editor:

I would again like to compliment both SYNC and Alan Pattison for an excellent program "Small Business Payroll" (*SYNC* 3:2). However, I found that I could not copy any of the screen displays on my printer because any keyboard input routes you to another section of the program.

Some of the menu items I wanted to copy are: 2, 4, 5, 6, 8. By adding the following lines I am now able to copy any screen display I want:

```
442 IF M$='Z' THEN COPY
443 IF M$='Z' THEN
GOTO 440
976 IF M$=' ' THEN
GOTO 975 (was 978)
977 IF M$='Z' THEN COPY
978 IF M$=' ' THEN
GOTO 975
1993 IF M$='Z' THEN COPY
1994 IF M$='Z' THEN
GOTO 1990
3917 IF M$='Z' THEN COPY
3918 IF M$='Z' THEN
GOTO 3910
4142 IF M$='Z' THEN COPY
4143 IF M$='Z' THEN
GOTO 4140
```

To make room for these changes and to stabilize the program (I was getting a lot of Report Codes due to memory saturation), I reduced the number of employee records from 35 to 30.

I appreciate your publishing these valuable programs and look forward to similar programs in future issues.

Robert Keneely  
125-10 Queens Blvd.  
Kew Gardens, NY 11415

## PCB Differences

Dear Editor:

Timex Sinclair users should be aware that Timex has used several different

printed circuit board etch patterns in producing the ZX81 and the TS1000. As a result, the experimenter may be confused by differences in the patterns which the conductor strips make on the solder side of the board. Practically speaking, this means that readers attempting to follow Figure 7 in my article "Keyboard System Conversion" (*SYNC* 2:3, p. 30) may find that the etch pattern of their CPU board is different.

The key is to remember that, no matter what version of the PCB one has, the pin assignments on all ICs must be the same, all components have the same relative position, the signals of the keyboard connector must be in the same order, and the wiring of the keyboard conversion cable puts lines AB-A15 and KBO-KB4 in the same order.

Readers should note that this difference in etch patterns may apply to other products and modifications which require that a certain signal line be jumped or a particular trace be cut. Experimenters should refer to a ZX81 schematic for assistance in identifying different traces using a "variant" PCB etch pattern or one which does not resemble exactly an illustration in a hardware article.

Robert B. Trelease, Ph.D.  
2313 5th St.  
Santa Monica, CA 90405

## Keyboard Bumps

Dear Editor:

After playing a few games that required fingers on several keys, I found that I could not consistently keep my fingers in place. After trying several ways of creating a bump I could feel on the keys. I settled on 5 minute epoxy. It sticks well to the keyboard surface and can be easily removed without damage by a fingernail. I used a toothpick to apply a small (very small) drop in the center of each key. After an hour, the epoxy

was fully cured, and I have a tactile keyboard that cost next to nothing.

Ted Rodgers  
1157 W. Peachtree St., N.W.  
Atlanta, GA 30309

## Stringing along

Dear Editor:

I enjoyed Paul Wentink's "Stringing along with the ZX81" (*SYNC* 3:4). However, it does have some limitations. It does not allow for freely formatted data. For instance, it allows for only numbers of the same length, e.g., 30, 40, 50, and not for 1.325, -.82, 100.367.

I am an economist, and in trying to use the data storage capabilities of the ZX81 to the maximum I devised a way to store numerical data in a flexible way. The lines below give a DATA-READ simulation which allows for variable number lengths and variable size arrays. The method is flexible since you can have the ZX81 recognize any data separator, e.g., a space, merely by changing the contents of the strings in lines 60, 70, and 80.

```
10 LET A$=' '10, 1.235,
-.82, 101.5, ' '
20 DIM A(4)
30 LET Q=0
40 LET P=1
50 FOR I=1 TO LEN A$
60 IF A$(I)=' ', ' ' THEN
LET Q=Q+1
70 IF A$(I)=' ', ' ' THEN
LET A(Q)=
VAL A$(P TO I-1)
80 IF A$(I)=' ', ' ' THEN
LET P=I+1
90 NEXT I
100 FOR I=1 TO 4
110 PRINT A(I)
120 NEXT
```

“What  
more can  
I do?”

Your computer can probably do more for you than you originally thought. And learning to expand its capabilities is as easy as reading a good book.

SYBEX is the pioneer of computer book publishing, offering over 60 titles developed for beginners through advanced. They are so well written and easy to understand that virtually anyone can learn to operate a computer in a matter of hours.

**The Timex/Sinclair 1000™ BASIC Handbook** by Douglas Hergert (\$7.95) This is the indispensable computerside companion for programming your Timex/Sinclair 1000™. You will find clear descriptions, proper syntax and examples of every keyword and function in the Timex/Sinclair 1000™ BASIC vocabulary.

**Timex/Sinclair 1000™ BASIC Programs in Minutes** by Stanley R. Trost (\$7.95) Get the advantages of programming your Timex/Sinclair 1000™ without having to learn how to program. This collection of BASIC programs allows you to: calculate home finances, analyze business and personal investments, investigate real estate options and much more.

**More Uses for Your Timex/Sinclair 1000™ Astronomy on Your Computer** by Eric Burgess (\$8.95) Study the stars and planets in your own home. The ready-to-run programs allow you to observe constellations,

stars, planets, meteor showers and all that is celestial—on your television screen.

SYBEX books are available at bookstores and computer stores everywhere. For a free catalog, mail the coupon or call TOLL-FREE 800/227-2346. Prices subject to change without notice.

**Your Timex/Sinclair 1000™ and ZX81** by Douglas Hergert (\$6.95) Learn the ins and outs of your Timex/Sinclair 1000™. You can learn how to connect the computer to your television set, program it, perform math, make bar graphs and play games.

Sir Clive

## Sir Clive

As we all know, the ZX80, the ZX81, and the Spectrum computers—the computers which have enabled hundreds of thousands to enter the computer age—were invented by Clive Sinclair in Great Britain. On June 11, 1983, he became Sir Clive when Birthday Honors were bestowed by Queen Elizabeth II. Sinclair, whose company Sinclair Research is a market leader in volume production of personal computers, said that the event came as a complete surprise. "More than ever I feel committed to achieving success both in and for Britain," said Sir Clive.

## SYNC at the Library

Our theme section this issue is "SYNC at the Library." This is a Book Buyer's Guide. We have gathered together as many titles and brief descriptions of printed resources as we could find, but we know the list is not definitive. The book list for the ZX81 and TS1000 is a long one. Since Eric Deeson has given us an overview of books from the U.K., the Spectrum section includes those that are currently available from U.S. publishers. The general category could be much more comprehensive, but where could we stop? We have just suggested a few titles.

Local public libraries can give you access to ZX/TS arti-

cles in other publications through various readers guides and indexes. Indexing services and data banks covering only computer publications are now available.

We have not covered any works of fiction since at this time we have not heard of any in which the ZX/TS computer plays a role. As we would expect, computers do play a substantial role in science fiction stories, especially some of the more recent works. We find three main themes that seem the most popular.

First, the computer is a tool in the hands of the forces of Good. In such stories, it is strictly subordinate to the human users. It is "user friendly." E.E. "Doc" Smith fans will recall the "cubic mile" Brain in the Skylark series and The Brain in the final story in the Lensman series.

Second, the computer as a tool in the hands of Evil for the domination, repression, or social control of humanity. The conflict is between human beings, but victory for Good requires besting not only Evil, but also the computer. This theme is illustrated by E. Hoffman Price's *Operation Misfit* and Roger Zelazny's *My Name is Legion* (an allusion to the unclean spirits cast out in the biblical story in Mark 5).

But perhaps the most fascinating theme is the computer as Man's ultimate enemy. How does Man defeat the Computer when it has assumed virtually the power of divinity? We immediately think of the famous (or infamous) "Hal" of *2001* and his most recent rival "The Ultimate Computer" designed by Gus in *Superman III*. *The Funco File* by Burt Cole is based on The Machine which must deal the problem of deviation in its ordering of the world.

Such works are provocative and entertaining ways of exploring the issues that must be faced as the computer age develops. Many more issues need to be explored, however. What is your favorite computer related story? Drop a card

to *SYNC* with the title, author, and a brief statement of the computer's role in the story. Be sure to include your name and address. Now, did anyone read the one about the night the ZX81 (with only a 2K RAM upgrade and a few additional chips mounted on an expansion board bought from a *SYNC* advertiser) took over a large midwestern city, and...

#### Next Issue

The theme section for our next issue will be "SYNC at the Concert," and will gather articles, programs, and products having to do with music and sound on the ZX/TS computers. We will also take a look at expansion keyboards.

Upcoming themes include another look at the home and business office (including word processing packages) and at work related computer uses.

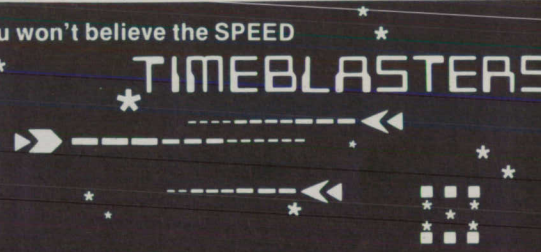

#### In and Out of SYNC

The ZX80 was introduced as the first personal home computer under \$200. The proliferation of computers in that price range inevitably invites comparisons with the ZX/TS computer. In this issue we are beginning a new department called "In and Out of Sync."

We are planning to have a two pronged thrust to this department. First, we will take a close look at one of the other computers in this lower price range. Then we will take some programming techniques on the ZX/TS computers and see how these are done on the machine being reviewed and at least one other computer, or we will take a technique from another computer and see how the same thing can be done on the ZX/TS computers. We will begin with a look at the Panasonic JR-200 and compare programming on the TS1000, the JR-200, and the Vic-20. ■

You won't believe the SPEED

# JUST FOR FUN

Generally *SYNC* prefers articles in some depth to help you get more out of your computer. However, we receive many short programs that illustrate a point, demonstrate a technique, or show something the reader has found interesting.

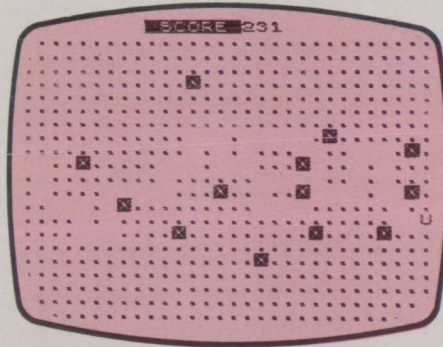

"Just for Fun" shares these programs with you. If you learn something, great. If you have some fun, great. If you have some programs that you want to share, send them to: Just for Fun, *SYNC*, 39 E. Hanover Ave., Morris Plains, NJ 07950.

## Survive

Robert J. Midura

8K ROM; 16K RAM

The object of "Survive" is to survive long enough to obtain score points before the computer zeroes in on your location and blasts you. You maneuver on a 21 x 31

grid of periods using the arrow keys on 5, 6, 7, 8. Each time you land on a period, you get 2 points. Landing on a location that has been hit (marked with an inverse X) results in losing 1 point. Landing on a clear location (a space) does not affect your score.

As you move, the computer will blast locations according to your location and direction. You should not stay in one location or head in one direction for too long or you will be hit.

The game ends when you are hit or you move into screen column 31. Ending the game by moving into column 31 will net you a bonus of 100 points.

Type in the program as shown, put the computer in SLOW mode, and type GOTO 1000. To play again, type CONT and ENTER. You may adjust the difficulty

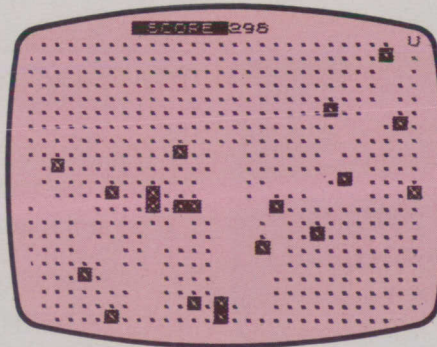

by changing the values in line 60. Use large integers for easier games and smaller integers for harder games.

Graphics notes:

80: T,Y,T,Y, inverse X.

110: Inverse space, inverse SCORE, inverse space.

1030: Space, 31 periods.

## The ZX Pumpkin

Mark L. Hall

8K ROM; 2K RAM; 1K RAM

This year you will not have to buy a pumpkin for Halloween, and yet you will be ready for the trick-or-treaters with your

ZX/TS pumpkin. To set up your ZX/TS Jack-O-Lantern, type in the listing in Figure 1, put your computer in SLOW mode, and press ENTER.

The first six lines of the program draw a rough oval and paint it black. This, of course, is your ZX/TS pumpkin. The next four lines and the sub-routine at line 120 draw the lines of the pumpkin segments. Lines 50 and 53 draw the stem. The next two lines draw the eyes and nose. Lines 65-110 flash the message and teeth of the pumpkin in its mouth. The sub-routine at line 100 is a half second pause so that your trick-or-treaters can read the message. Use BREAK to get out of the program.

The program was originally written on the ZX81 and expanded when I got my 16K RAM pack.

Robert J. Midura, 19 Merrifield St., Worcester, MA 01605.

Mark L. Hall, 1705 11th St., Anacortes, WA 98221.

# VOICE SYNTHESIZER

- Now you can purchase the Zebra-Talker unlimited vocabulary voice synthesizer for only \$59.95.
- The Zebra-Talker is TS1000 and ZX-81 compatible.
- The Zebra-Talker voice software (requires 16K) will help you create whatever you want to say.
- The Zebra-Talker uses the famous VOTRAX SC01 phoneme synthesizer with programable pitch levels. It produces all the phonemes required for English and Spanish speech.
- The Zebra-Talker is very memory efficient: one single line in BASIC will produce a full sentence.
- It is so simple to use you can add voice to any program in just minutes.
- There are hundreds of applications in education, robotics, speech therapy, monitoring, games, aids for the handicapped, security, prompting, and more.
- Expansion connector for "Piggy Back" expandability.
- You can plug the Zebra-Talker's output into any audio system, or order our #C145 Amplifier/Speaker module with volume control for just \$12.50.
- Includes assembled & tested Zebra-Talker, instruction manual, and software on cassette.
- 15-Day Money Back Guarantee.

## GREEN SCREEN

Now Timex Sinclair users can enjoy many of the benefits IBM and all the biggies are getting with Green Phosphour monitors ... and at a fraction of the cost.

- The Green Screen is a specially molded plastic optical filter which relieves eye strain by enhancing character contrast and by eliminating the components of white light which cause eye fatigue.
- The Green Screen fits right onto the picture tube like a skin because it is molded to match the curvature of your TV. We also include some invisible reusable tape for secure fastening.
- The filter material that we use is just right, not too dark nor too light. The result is a really eye pleasing display.
- The Green Screen will fit any 12" TV or monitor and can easily be trimmed with a pair of scissors to fit any smaller size.

Order C140 . . . . . \$12.95

## KEYBOARD BEEPER

Experience for yourself how much the Keyboard Beeper improves the use of your TIMEX keyboard. Simply plug it into your computer's expansion connector and hear a beep whenever a character is accepted by the computer's keyboard input routine. No software is required. Features expansion connector for RAM etc.

**BONUS 1** - You can trigger the beep from Basic. Great for program prompts, timers,  
**BONUS 2** - A beep every 9 minutes will remind you that your computer is on.  
ORDER #C133 . . . . . \$19.95

## THE ZEBRA KEYBOARD

- 1—Superior Quality:** Same key mechanism as used by IBM, Texas Instruments, Hewlet Packard, and others. Full travel, gold inlaid contacts for over 10 million operations.
- 2—Professional Full Size Layout:** 40 keys corresponding one to one with your computer's, plus space bar in case you do word processing.
- 3—Looks Good & Feels Good:** Attractive custom molded enclosure matches your system. Sharp TS1000 legends in two colors are easy to read and will never wear off.
- 4—Easy Installation:** No soldering or technical knowledge required. Done in minutes with simple instructions.

DUAL TRACE 'SCOPE'

w/trigger & cursor.

155,000 samples per second. High Resolution Printer Plotter. Works with ZX81/TS1000, 16K RAM, ZX or TS2040 printer & our Analog Interface Board. Cassette tape & manual. ... \$35.

FREQUENCY ANALYSIS—'FFT'. Fast Fourier Transform on EPROM.

4K of Z80 code. 256 points of magnitude & phase data calculated in one second. This can be used as a subroutine with the 'SCOPE' to display frequencies up to 75Khz. Two 2716's or one 2764 & docs ... \$75.

ANALOG INTERFACE BOARD

8 channels A/D - 8 channels D/A. High Speed 1.6 micro-seconds A/D convert time. Easy to program. Many Jumper & switch selectable options. Has features which allow easy interfacing to other micros such as TS2000, TRS-80, Apple, CBM 64, Jupiter Ace, others. Manual w/software. You must see spec sheets to appreciate this board. ... \$195.

EPROM BOARD containing 'SCOPE' & 'FFT' at 8K to 16K. The Basic part of the program is transferred up to RAM for use. Consists of four 2716's on the 'Hunter' board with piggyback connectors. ... \$100. EPROMS alone-inquire.

ANALOG INTERFACE with EPROM Board attached and piggyback mounting. ... \$275. Box and ribbon cable mount for Analog Board. ... \$30.

HIGH RESOLUTION PRINTER

Graphics, data acquisition, averaging, & scaling routines. Graticule optional. Can be used with or without Analog Board. The graphs on the right are of heartbeats captured with this program, an electrocardiograph, and the hardware pictured. Cassette tape & manual. Terrific value. ... \$35.

When our Analog Board and new software are coupled with the Timex computer & printer we realize instrumentation & control capability which is unmatched by anything else in its price range. The software we now offer demonstrates only a few of the high quality applications which are now possible.

CIRCLE 78 ON READER SERVICE CARD

## Obtuse Triangle

Michael W. Schultz

This program will draw an obtuse triangle, which is any triangle with an inner angle greater than 90 degrees. This is done by drawing line BC (lines 10-40) and then two oblique lines starting at each end of line BC and have them converge on point A (lines 50-100). The resulting drawing will be the obtuse triangle ABC.

Enter the program in Listing 1. Hit RUN and ENTER in either the SLOW or FAST mode. Notice the uneven spacing caused by the approximated PLOTting of X and Y in the long side AC. This can be remedied by inserting the lines in Listing 2.

Michael W. Schultz, 3650 Mossvale Dr. 20-D,  
Mobile, AL 36608.

### Listing 1.

```

1000 REM "OBTUSE TRIANGLE"
1010 LET Y=200
1020 FOR X=200 TO 40
1030 PLOT X,Y
1040 NEXT X
1050 LET X=200
1060 FOR Y=20 TO 30
1070 PLOT X,Y
1080 PLOT 3*X-20,Y
1090 LET X=X-1
1100 NEXT Y
1110 PRINT AT 6.5,"A"
1120 PRINT AT 12,10,"B"

60 NEXT X
70 NEW
    
```

## Train Revisited

John C. Hill

### 8K ROM; 2K RAM

SYNC 3:2 is the first issue I have seen, and I enjoyed the "Just for Fun" column. It is amusing and instructive—more fun than reading instructions.

However, the pixel that wanders off into the air above Joe Chaiet's train did not seem to go far enough. The train needs more "smoke." The program below is my doodling to that end. Type in the lines. Be sure you are in SLOW mode, and press RUN and ENTER. Watch the smoke!

John C. Hill, 4777 — 119th Ave., S.E., Bellevue, WA 98006.

```

5 PRINT AT 4,4;"FIRE UP THE T
RAIN"

## New Product Reports...

### MKIV Keyboard

Just released this Spring is the MKIV Keyboard from E. Arthur Brown Company. Designed to upgrade the TIME X-Sinclair 1000/ZX81 computer, this keyboard has some remarkable features. For one thing, it's made with very high quality keyswitches. The resulting action of the keys is just like that found on computers costing thousands more. Keys spring back up promptly after pressing... they never stick and always make the electrical contact needed for data input.

Another feature of the MKIV is the keytops themselves. The legends are installed with a sophisticated sublimation process. Rather than being painted, molded, or simply stuck on, they're actually impregnated into the plastic. This results in smooth faced keytops with legends that are virtually impossible to wear out. Each key is light gray colored with red and black legends.

The MKIV Keyboard Shown With Accessory Numeric Keypad.

There are 41 keys on the MKIV Keyboard. That's the standard 40 Timex-Sinclair keys plus a full length space bar. In the future, there will also be a 19 key numeric keypad accessory that will simply plug onto a jack in the side of the keyboard. (Note: Photo shows 12 key prototype keypad.) At present, the Numeric keypad is not yet available.

The price of the MKIV Keyboard is \$89.95 plus \$4.95 for shipping and handling. It carries a 90 day warranty and a 10 day, money back free trial. Contact E. Arthur Brown Company, 1702-SYN Oak Knoll Drive, Alexandria, MN 56308 to order. For those interested, the company also offers a free catalog of other TS1000/ZX81 Accessories.

### High Speed Word Processing/Typing

Memo-Text is a new TS1000/ZX81 word processor from E. Arthur Brown Company that features a unique high speed character entry routine. You can type at full speed without having to wait for the com-

puter to catch up. This speed is maintained until the screen fills and then your text just scrolls upward for more character entry.

Another feature of the Memo-Text program is the ability to handle text and data files and to LOAD/SAVE them separately or all at once. Automatic printing of form letters, invoices, or other personalized mass correspondence is entirely within the scope of the system. Text formatting capabilities include fast scroll scanning of files, finding, exchanging, and moving blocks of text, amending, renaming, deleting text files, double sized letters, centering, pagination, headers, indentation, and several other features. All keys have full repeat capabilities with Memo-Text. Typing is just like using a typewriter. That is, all text is read by the printer as lower case unless shifted.

One very important consideration for potential Memo-Text buyers is the necessity of using it with a Memotech Centronics interface and full size printer. The program is designed to interact with the lower case capabilities of this interface and won't give a printout without it.

Memotext handles 16-64K of RAM and sells for \$48.95 plus \$3.95 for shipping and handling. Order from E. Arthur Brown Company, 1702-SYN Oak Knoll Drive, Alexandria, MN 56308. Those of you in need of a full size printer to use with Memo-Text might consider the Seikosha Printer package. It consists of an 80 character dot matrix printer, the Memotech Centronics interface, a hookup cable, and paper. To order, send an additional \$339.95 plus \$3.00 for shipping and handling.

Seikosha Printer Package

### Business Programs That Read Data Tapes

Mega software is a new series of integrated software for the TS1000/ZX81 from E. Arthur Brown Company. It consists of programs that can actually read data tapes produced by other programs within the series. The data read is then used by the present program to update its own data files. For example, the invoicing program can be used to send bills to customers and then its data tape can be read by the accounts receivable program to update receivable files. You don't have to manually re-enter the billing information.

There are two integration groups in the Mega series. The Mega Master group consists of a desk top organizer, a spreadsheet, a word processor, a data base, a statistical analyzer, and a graph plotter. The Mega Wealth group is a small business set up. It consists of an invoicing program, accounts receivable, accounts payable, an inventory program, and a net earnings program which produces profit/loss statements and

balance sheets. Each program works for 16-64K of RAM and sells for \$20-\$25. For more information write to E. Arthur Brown Company, 1702-SYN Oak Knoll Drive, Alexandria, MN 56308.

#### New Catalog Addresses Compatibility

A new peripheral and software catalog which addresses the problems of peripheral and software compatibility has just been announced by the E. Arthur Brown Company. According to their president, Eben Brown, peripheral compatibility is the future of TS1000/ZX81 computing. This new catalog tells you what works with what... saving you time and money by avoiding bad purchases. The catalog contains over 130 new products with in-depth descriptions and photos. For your free copy, write: E. Arthur Brown Company, 1702-SYN Oak Knoll Drive, Alexandria, MN 56308.

#### New Catalog

Over 130 exciting new ZX81/TS1000 products: Memory expansion, keyboards, mass storage, expansion, printers, etc. Software includes personal, business, technical applications and arcade games. Order your free catalog today!

#### Order Blank

## The TS2000 Series

### Overview

The TS2000 series of computers claims an extensive group of features—both hardware and software. The machines feature 24K ROM. The TS2048 has 16K RAM at its disposal while the TS2068 wields a well-utilized 48K RAM.

### CPU and Operating System

The TS2000 uses a Z80A microprocessor running at 3.5MHz. It contains a few buffers, either 2 or 6 RAM chips, 2 ROMs, and the piece de resistance: a 64 pin custom chip designed by a few wizards at Timex.

The TS2000 features a full-sized 24K operating system (OS) which provides the

Basic interpreter, full-channeled I/O facilities, and a function dispatcher that the user can call to have both simple and complex functions performed for him by the system, thus utilizing the system's facilities, and not duplicating them.

The TS2000's native language is Basic. It packs all the standard Basic statements including PRINT, INPUT, IF...THEN, FOR...NEXT, READ...DATA, etc. A full list of commands is given in Table 1. The functions are listed in Table 2.

### The Display

The TS2000 supports several different display options. These include 32 column display, 64 column display, Hires screen of 256 x 192 pixels, Hires screen of 512 x 192 pixels, page switching, and an en-

hanced color-resolution mode. The machine provides connections for a B&W or color TV, an RGB monitor and composite video.

### The Keyboard

The keyboard is a 42 hard-key keyboard, including a full-sized space bar and shift keys on both sides. The keyboard is full-sized and provides real tactile feedback (i.e., the button actually pushes down). The operating system provides for single key entry of all keywords.

### Interface and Connectors

The cassette interface on the TS2000 is a step above the one on the TS1000, although the one provided with the TS1000 is sufficient for the type of jobs it

Table 1. List of Commands.

Beep x,y	Sounds a note through the loud-speaker whose duration is x seconds, and is y semitones above middle C (or below if y is negative).	CLOSE #c	x out of the reach of BASIC. Closes the specified stream, after flushing the appropriate buffers where necessary.
Border x	Sets the border color to color x. Colors: 0 Black            4 Green 1 Blue            5 Cyan 2 Red             6 Yellow 3 Magenta        7 White	CLS CONTINUE	Clears the main screen. Continues executing the currently in-memory program where execution left off.
BRIGHT x	Sets brightness level for subsequently printed characters. If x=0 then normal brightness; x=1 for bright; x=8 for transparent.	COPY	Sends a copy of the screen to the printer.
CAT "m", "volspec"	Lists all files on the specified volume on the screen.	DATA e <sub>1</sub> ,e <sub>2</sub> , . . . e <sub>n</sub>	Part of the data list. Must be in a program.
CIRCLE, x,y,z	Draws an arc of a circle whose center is at (x,y), and whose radius is z.	DEF FNv(v <sub>1</sub> ,v <sub>2</sub> . . . v <sub>n</sub> )=e	User-defined function definition; must be in a program. Each of the v, v <sub>1</sub> to v <sub>n</sub> must be either a single letter or a single letter followed by a dollar sign "\$" for numeric and string arguments, respectively.
CLEAR	Deletes all variables, freeing the space that they occupied. Does RESTORE and CLS, resets the PLOT position to the bottom lefthand corner, and clears all pending GOSUBs.	DELETE x,y	Deletes lines from the program whose line numbers range from x to y. If the x is omitted, then deletion starts at the beginning of the program. If the y is omitted, then deletion continues to the end of the program.
CLEAR x	Like CLEAR, but, if possible, the RAMTOP pointer will be set to x, leaving all memory beyond location		

Table 1. Continued.

DIM v(x <sub>1</sub> ,x <sub>2</sub> ,... x <sub>n</sub> )	Creates an array with the name v and sets it up as an array of characters of n dimension, which are: x <sub>1</sub> ,x <sub>2</sub> ,... x <sub>n</sub> .	LLIST	LLIST 0
DIM v\$(x <sub>1</sub> ,x <sub>2</sub> ,... x <sub>n</sub> )	Creates an array with the name v\$ and sets it up as an array of characters of n dimension, which are: x <sub>1</sub> ,x <sub>2</sub> ,... x <sub>n</sub> . This may be considered as an array of strings of fixed length x <sub>n</sub> with n-1 dimensions x <sub>1</sub> ... x <sub>n-1</sub> .	LLIST x	Like LIST, but listing comes out on the printer instead of the screen.
DRAW x,y	Equivalent to DRAW x,y,0.	LOAD f	Loads program and variables
DRAW x,y,z	Draws a line from the current plot position moving x horizontally and y vertically relative to it, while turning it through an angle of z radians.	LOAD f DATA ()	Loads a numerical array.
ERASE "m","filespec"	Removes specified file from the specified volume.	LOAD f DATA \$()	Loads a string array.
FLASH x	Defines whether subsequently printed characters will be flashing or steady. x=0 for steady, x=1 for flash, x=8 for no change.	LOAD f CODE m,n	Loads at most n bytes, starting at address m.
FOR v=x TO y	Equivalent to FOR v=x TO y STEP 1.	LOAD f CODE m	Loads bytes starting at address m.
FOR v=x TO y STEP Z	Deletes any simple variable v and sets up a control variable with the value x, limit y, step z, and looping address referring to the statement after the FOR statement.	LOAD f SCREEN\$	Loads a screen picture.
FORMAT "m","volspec"	Formats the media on the specified volume, and assigns to it the specified volume name.	LPRINT	Like PRINT, but uses printer instead of screen.
GOSUB x	Calls the subroutine at line x. Note that x may be an expression like 200*z+1000.	MERGE f	Like LOAD, but merges instead of deleting memory first. All forms as per LOAD.
GOTO x	Jumps to line x, or, if there is no line x, to the first line following.	MOVE "m","old filespec", new filespec"	Renames the old file to the name new filespec.
IF x THEN s	If x is true, (i.e., non-zero), then s is executed. Note that s includes all the statements to the end of the line.	NEW	Clears memory including program, variables, etc., up to RAMTOP.
INK x	Sets the ink (foreground) color of subsequently printed characters.	NEXT v	Marks the end of a loop.
INPUT ...	The "..." is a sequence of INPUT items, separated by commas, semicolons, or apostrophes. An INPUT item can be: (1) Any print item not beginning with a letter. (2) A variable name. (3) LINE, followed by a string-type variable name. The PRINT items and separators in (1) are treated exactly the same as in a PRINT statement except that everything is printed at the bottom of the screen.	ON ERR CONTINUE	Continues execution of program where the last trapped error occurred.
INVERSE x	Controls inversion of subsequently printed characters. If x=0, then no inversion is selected and all characters are printed as ink color on paper color. If x=1, then inversion is selected and all subsequently printed characters are printed as paper color on ink color.	ON ERR GOTO x	Sets up the system so that the computer will jump to line x if an error occurs. The programmer may then handle the trapped error as he desires.
LET v=e	Assigns the value e to the variable v.	ON ERR RESET	Turns off error trapping.
LIST	LIST 0	OPEN #c,"m","filespec"	Opens a stream identified by c and ties it to the device specified or file on the device specified.
LIST x	Lists the program starting at line x, making x the current line.	OUT x,y	Outputs byte y to port x.
		OVER x	Controls overprinting of subsequently printed characters.
		PAPER x	Like INK, but controls paper (background) color.
		PAUSE x	Stops operations for x sixtieths of a second, (i.e., PAUSE 120 waits for 2 seconds) or until a key is pressed. PAUSE 0 waits forever until a key is pressed.
		PLOT x,y	Plots an ink spot at pixel (x,y); moves plot position.
		POKE x,y	Places the value y in memory location x.
		PRINT ...	The "..." is a sequence of PRINT items, separated by commas, semicolons, or apostrophes. A semicolon between two items has no effect; it is used only to separate the two items. A comma outputs the comma control character, moving the print position to either column 0 or column 15. An apostrophe outputs an ENTER character.
			At the end of a PRINT statement, if it does not end with a semicolon, a comma, or an apostrophe, then an ENTER character is output.

## Expands the use of your TIMEX SINCLAIR COMPUTERS

### SOFTBOX™

- Expands the expansion port of your Timex Sinclair computer
- Has 4 gold plated, fully buffered ports
- Software selectable, any desired port/ports
- Longer life to your computer console and program cartridge
- Has LED indicator, on/off switch and DC power input jack
- Provides power to your computer and peripherals
- Eliminates the computer overloading and peripheral connection problems

#PL7012 \$59.95

Needs flexible ribbon connector; will be available for TS1500 and TS2000 computers

### DATA COMMUNICATION PACKAGE

- Now your Timex computer can communicate directly on your telephone line with other computers and data base networks such as COMPUSERVE, DOW JONES NEWS RETRIEVAL, etc.

1. "J-CAT" Modem by NOVATION, 0-300 BAUD

#PL7017 \$129.95

2. RS232 Interface

#PL7006 \$99.95

3. Connecting Cable

#PL7018 \$19.95

PACKAGE including items 1, 2, & 3

#PL7020 \$197.95

### PRINTER'S PACKAGE

Our printer package enables you to printout all the received information

- SEIKOSHA GP100, 9 Inch Printer
- MEMOTECH Centronics Interface
- Printer Cable

#PL7019 \$299.95

### MEMOTECH PRODUCTS

MEMOPAK 16K #PL7002 \$44.95

MEMOPAK 32K #PL7003 \$89.95

MEMOPAK 64K #PL7004 \$134.95

HIGH RESOLUTION GRAPHICS #PL7007 \$89.95

KEYBOARD #PL7011 \$89.95

MEMOCALC #BS2001C \$53.95

MEMOTECH #PL7014 \$44.95

MEMOASSEMBLER #PL7015 \$44.95

### QSAVE

A Reliable Fast Loading System

- Operates 16 times faster than the Sinclair system (i.e. Loads/Saves 8K in 10 secs; 48K in 110 secs)
- Operates with any memory and on any program length
- Works equally well with AUTORUN programs, BASIC or MACHINE CODE
- This is what you get:

- A cassette interface to improve the signal quality. To make loading most reliable an AUTOMATIC LEVEL CONTROL, an OVERLOAD WARNING LIGHT, a SAVE/LOAD SWITCH, an ON/OFF SWITCH are also built into this unit.

- Highly sophisticated, superbly easy to use 1/2K software for up to 16K and 64K programs

#PL7001 \$37.95

Needs Flexible Ribbon Connector or Softbox

### MCODER (16K RAM)

- The first real integer BASIC compiler for the TS1000 computer
- Give your BASIC program the speed of MACHINE language programs
- 75 times and in some cases up to 900 times speed improvement
- Very simple to use:

  - Load MCODER
  - Write your BASIC program according to the manual and compile it through the MCODER by using a single PRINT USR command

- BASIC programs can be compiled and "Stacked" above each other in memory

#PL4001 \$18.95

### ASSEMBLER/DEBUGGER "ZXAD" (16K RAM)

- Write machine code quickly and easily
- Two pass assembler, ZILOG mnemonics, 8 pseudo-OPS
- Debugger includes examine/modifying, breakpoint with register display
- Occupies 7K, comprehensive multi-page manual

#PT4003 \$18.95

### STOPPER

- Enables you to break through any machine code software, list it on the screen, save it on another tape, or print it out
- Very simple to use, load STOPPER into your TS1000 and follow the simple instructions on the screen

#PT4002 \$18.95

### DISASSEMBLER (Decoding Tool) On Solid State Cartridge

- Disassemble any assembly language code on memory
- Assembly language games and other programs

#PT4004 \$34.95

### FLEXIBLE RIBBON CONNECTOR

No More System Crashes

- Connects any RAM expansion to your TS1000
- Prevents usual system crashes caused by the computer or the RAM movement
- 7 inches long flat ribbon cable

#PL7016 \$17.95

BYTE-BACK modules

# 64-K MEMORY

With Battery Backup

## \$109.<sup>95</sup> KIT

\$119.<sup>95</sup> ASSEMBLED & TESTED

### the "ULTIMATE MEMORY" UM-64

FEATURES:

- Battery Backup - Computer and full 64-K Backed
- PROM/ROM socket
- Reset Switch-Reset without destroying Program
- BYTE-BACK EXCLUSIVE FULL 64-K

The 0-8K area is available. You can execute a copy routine (provided) to copy the TIMEX ROM into the 0-8K area of RAM then flip a switch and you have your operating system in RAM. You can modify it and create your own customized operating system. Full details, examples & programs included.

**WHY PAY MORE FOR LESS FEATURES?  
GET THE "ULTIMATE MEMORY"  
BYTE BACK'S UM-64**

## NEW ZX PRO/FILE

Cassette & Book  
**\$16.95**  
including shipping

Clearly the Best File Management Program Available.  
This New Program is what the Timex has been waiting for.

At BYTE-BACK we have used & evaluated almost every data organizer & Data File Program on the market & we were not really impressed until we tried **Thomas Woods' NEW ZX PRO/FILE** Program. It is truly the best piece of software we have seen for the Timex Computer. We now use it to help run our business. This program is so FAST that even when the program is full the file you want is on the screen within a second.

The ZX PRO/FILE has features not found on the other Data File programs. It has: **FILE ANALYSIS** function which allows you to count, analyze frequency, %, etc. Capability to create **FILES OF ANY SIZE** in the same program. **MULTIPLE WORD SEARCH**, excellent **ADD/EDIT** features. **ORDERED FILE OUTPUT** based on any numerical value contained in the files. **DEFINABLE PRINTER FUNCTIONS & AUTO SEARCH**. Works with both **16K & 64K** memory.

**FREE 59 page BOOK**. This book alone is worth the purchase price. ZX PRO/FILE's machine language concepts & methods are fully explained. It includes a complete **PROGRAM LISING & detailed explanation** of how the program works & how it can be easily modified. It also includes a machine language programming section.

**16 K MEMORY UM-16 \$59.95 KIT \$69.95 assembled & tested**

Battery backup, reset switch, PROM/ROM socket PLUS...  
**1 year, 100% trade-in credit towards the UM-64.**

## RS-232 Module \$59.<sup>95</sup>

ASSEMBLED & TESTED \$69.95

Drives the Gorilla/Banana & Other Serial Printers

**ALL MODULES CARRY 90-DAY WARRANTY**

TRY BYTE-BACK MODULES FOR 10 DAYS WITH NO OBLIGATION

ALL NEW  
MD-2

## SMART MODEM

In Stock!

## \$119.<sup>95</sup> KIT

ASSEMBLED & TESTED \$149.95

With New **SMART**, Menu Driven SOFTWARE included FREE.

- Send and receive Programs by Phone
- Copy Information into memory from a Host Computer (such as **Compuserve**), Print it, Review it, Save it on Tape, Send Text from Memory.
- Use Timex 2040 Printer or Any RS-232 Printer
- RS-232 Printer Port provided.
- No extra memory Required, But with 64-K Memory You Can Store Up To 60 Full Screens

COMPUSERVE PACKAGE WITH 5 FREE HOURS ONLY \$39.95

## BYTE-BACK'S BB-1 CONTROL MODULE

### \$59.<sup>00</sup> KIT In Stock!

ASSEMBLED & TESTED \$69.00

- **8 Independent Relays** (with LED status indicators)
- **8 Independent TTL Inputs** (with Schmitt trigger buffers)

• By using a single POKE command you can change and latch the status of each of the 8 relays.

• Your computer can read the status of all 8 inputs by the use of a single PEEK command.

• A comprehensive manual is included that has complete application details.

• More than one BB-1 can be used at a time.

NEW

## Gorilla/Banana Printer

Prints on Standard Paper. 80 Columns Discounted to only

Specify Serial or Parrallel.

## \$239.<sup>95</sup>

Table 2. List of Functions.

ABS x	Absolute magnitude.	PEEK x	The byte stored in memory location x.
ACS x	Arccosine in radians.	PI	3.14159265...
x AND y	x if y < > 0; 0 if y = 0	POINT (x,y)	1 if the pixel at x,y is ink color; 0 if it is paper color.
x\$ AND y	x\$ if y < > ; "" if y = 0	RND	A random number x, such that 0 < x < 1
ASN x	Arcsine in radians	SCREEN\$(x,y)	The character that appears at character location x,y on the screen.
ATTR (x,y)	Attributes for character on screen at position x,y	SGN x	Signum: the sign -1 for negative, 0 for zero or +1 for positive) of x.
BIN x	Yields the decimal of the binary number x. (i.e., PRINT BIN 10101010 prints 170).	SIN x	Sine x.
CHR\$ x	The character whose code is x.	SQR x	Square root.
CODE x\$	The code of the first character in x\$	STICK (x,y)	Reads stick number y. Reads button or joystick position according to y.
COS x	Cosine in radians	STR\$ x	The string of characters that would be displayed if x were printed.
EXP x	e <sup>x</sup>	TAN x	Tangent.
FN	FN followed by a single letter calls up a user-defined function.	USR x	Calls the machine language routine at address x.
FREE	Returns the number of bytes of memory available to the user.	USR\$	The address of the first of eight bytes describing the bit pattern for a user defined character.
IN x	Reads the byte at I/O port x.	VAL x\$	Evaluates x\$ as a numerical expression.
INKEY\$	The character currently being pressed key.		
INT x	Integer (in characters) of x\$.		
LN x	Natural logarithm (to base e).		
NOT x	0 if x < > 0; 1 if x = 0		
x OR y	1 if b < > 0; x if b = 0		

performs. The TS2000, however, is designed to be able to handle some larger and more involved tasks. Its cassette interface scheme has been designed to meet, functionally, with the needs of the system and its user. The cassette runs at about 1500 bps (bits per second). This means that the user can save 16K in approximately 87 seconds—about five times faster than the speed of the interface on the TS1000.

Because of the difference in the actual hardware interface between the two machines, TS1000 cassettes cannot be read into a TS2000 and TS2000 cassettes cannot be read into a TS1000. The interface is *very* reliable. I have been using the machine for about 10 months by now, 8-15 hours a day, and I have had perhaps a half dozen errors while trying to LOAD a program into the TS2000.

The TS2000 has two connectors available for adding joysticks (one or two) to the system. The industry standard 8-

position joysticks connect to the system via a 9-pin D-type connector. These are the same joysticks used by Atari and many other manufacturers.

#### Bank Switching

The most innovative feature of the TS2000 is bank switching. This is a means of expanding the computer's address space. Through the flexible scheme that Timex has designed, the TS2000 has the ability to access up to 256 \* 64K, or 16 million bytes of memory. Is anyone other than me waiting to see who develops the "16 megabyte RAM pack" first?

#### Conclusion

All in all, the TS2000 is a very powerful system. With the above described and below detailed features, plus a few extras, the system packs quite a load at a suggested retail price of \$199.95 for the TS2068 and \$149.95 for the TS2048.

In the next "Perceptions" I will discuss

in detail the graphics capabilities and the memory-expanding bank switching technique used by Timex to enhance the functionality of the machine. ■

## Read This First

Before you enter the programs in this issue, please note:

All programs require the **8K ROM** and **16K RAM** unless indicated otherwise at the top of the first page of the article.

**NEWLINE** and **ENTER** are used interchangeably.

A letter after a number shows the type: b for binary, d for decimal, and h for hexadecimal.

#### In PRINT statements:

#: Enter a necessary space.

A (32): The underline means use the graphic on that key. The number in () tells how many times.

A: The overline means use the key in inverse.

INPUT: An underlined word found on the keyboard should be not be spelled out. Enter it directly. If it will not ENTER, hit THEN and then the keyword you want; backspace, delete THEN, and continue entering the line. This memory saving technique may be disregarded if you have enough RAM.

"Miss Hendricks, I'm ready to ingest, process and generate information and knowledge."

# hardware tips *Robert D. Hartung*

*Ed.—A WORD OF CAUTION: Any hardware project must be approached with extreme caution. SYNC cannot be responsible for any problem that may arise from attempting hardware projects. Obviously, any damage to your computer can be costly in time and money. If you do encounter a problem, write a clear description of the problem either to SYNC or to the author and include an SASE. We will make every effort to find a solution.*

*For our "Hardware Tips" department this time we have asked Robert Hartung to comment on some letters from our readers. Since he had only the information given in the letters to work with, he cannot guarantee his answers. Rather his responses should be regarded as suggestions to help look for the answers. In most cases more details would be required in order to give a fuller answer. We welcome comments from readers on these problems also.*

## ROM and RAM Problems

### No Cursor

I added the 8K ROM and 16K RAM pack to my ZX80. With the 4K ROM/16K RAM pack, the cursor appears; however, with the 8K ROM/16K RAM pack, the cursor does not appear.

James Kinsella  
2846 St. Paul Blvd.  
Rochester, NY 14611

### Comment:

1) Examine the 8K ROM carefully with a magnifying glass to make sure none of the pins are loose, broken, buckled, or

bent under or to the side, and that all are entering properly into their respective positions in the IC socket, with the notched end of the ROM to the notched end of the socket as was the old ROM.

2) Guard against static damage to the ROM chips. If you do not have a grounding clip for ICs, it is good practice that the conductive foam wrapper be laid out next to the IC socket on the PC board before removing the old ROM from the socket and the new ROM from the foam. After gently lifting the old ROM with a very small screwdriver under each end, but with all the pins still touching the socket, place your little finger on the modulator shield, your middle finger on the foam, and lift the old IC out with your thumb and forefinger at each end of the IC, not touching any pins. Place it on the foam and pick up the new ROM the same way. It may be necessary to apply considerable pressure sideways, carefully and evenly, against all the pins at one side of the IC in order to line up all the pins on the other side for proper insertion.

A large (2" or larger) jaw-type paper clip, such as those made by Esterbrook and sold for about \$1 in larger stationery stores, makes a good substitute for a regular IC clip. Connect a grounding jumper between the clip and modulator shield and put the clip jaws over the IC module and on the pins on both sides before removing the IC from the conductive foam or prying the old ROM up from its socket. If properly positioned on the pins, the clip jaws will compress pin-rows toward each other for entry into the socket.

3) Herb Hornung's suggestion in *SYNC* 2:4, p. 76, may apply.

4) If the computer still does not work and if the ROM has not been subjected to static damage in handling after removing

it from the conductive foam, it is possible that you have received a defective ROM.

### Unconnected Input on the RAM Pack

On the Sinclair RAM pack one of the inputs to IC 2 (7400) pin 10 is not connected to +5V or ground. This is an unused gate on the chip and could contribute to some RAM pack difficulties.

Rois R. Harder  
895 Shakespeare Ave.  
North Vancouver, B.C.,  
Canada V7K 1E7

### Comment:

Sinclair's 1981 schematic for the 16K RAM shows pin 8 of the 74LS00 going to pin 1 of IC 3 and IC 4, and pins 9 and 10 of IC 2 both going to RFSH port of the edge connector.

### RAM Pack Connections

The ZX81 performance with the Sinclair 16K RAM pack was so erratic that it was almost impossible to obtain any consistent results. Repeated cleaning of the contacts resulted in only temporary improvement. I have, however, improved performance immeasurably by a simple procedure. I inserted a short piece of copper wire about 1/4" long under each of the 44 contact fingers on the RAM. The wire was from two or three one watt carbon resistors.

P. W. Andrew  
4824 E. Grant  
Fresno, CA 93727

### Comment:

Some later versions of the 16K RAM pack have greatly increased contact-finger pressure on the edgeboard connector compared to the earlier models. This is to accomplish what you seem to have achieved by wedging them more tightly to the edgeboard connecting strips.

# AARDVARK — THE ADVENTURE PLACE

TRS-80 COLOR    COMMODORE 24    VIC-20    SINCLAIR/TIMEX    TI99

## WE CARRY MORE THAN ADVENTURES!! MAXI-PROS WORD PROCESSING <sup>NEW</sup>

The easiest to use word processor that I know of. Has all the features of a major word processor (right and left margin justification, page numbering, global and line editing, single, double, triple spacing, text centering, etc.) at a very cheap price because we wrote it in BASIC. Includes 40 page manual and learning guide. Easily modified to handle almost any printer combination. Available on disk or tape for VIC20, COMMODORE64, and TRS-80 COLOR computer. Requires 13k RAM on Vic, 16k EXTENDED on TRS-80 COLOR. \$24.95 on tape \$29.95 on disk.

**LABYRINTH — 16K EXTENDED COLOR BASIC** — With amazing 3D graphics, you fight your way through a maze facing real time monsters. The graphics are real enough to cause claustrophobia.

Similar game for Timex/Sinclair 16k - hunting treasure instead of monsters \$19.95.

**ADVENTURE WRITING/DEATHSHIP by Rodger Olsen** — This is a data sheet showing how we do it. It is about 14 pages of detailed instructions how to write your own adventures. It contains the entire text of Deathship. Data sheet - \$3.95. NOTE: Owners of TI99, TRS-80, TRS-80 Color, and Vic 20 computers can also get Deathship on tape for an additional \$5.00.

**Dealers**—We have the best deal going for you. Good discounts, exchange programs, and factory support. Send for Dealer Information.

**Authors**—Aardvark pays the highest commissions in the industry and gives programs the widest possible advertising coverage. Send a Self Addressed Stamped Envelope for our Authors Information Package.

**ADVENTURES** — Adventures are a unique form of computer game. They let you spend 30 to 70 hours exploring and conquering a world you have never seen before. There is little or no luck in Adventuring. The rewards are for creative thinking, courage, and wise gambling — not fast reflexes.

In Adventuring, the computer speaks and listens to plain English. No prior knowledge of computers, special controls, or games is required so everyone enjoys them—even people who do not like computers.

Except for Quest, itself unique among Adventure games, Adventures are non-graphic. Adventures are more like a novel than a comic book or arcade game. It is like reading a particular exciting book where you are the main character.

All of the Adventures in this ad are in Basic. They are full featured, fully plotted adventures that will take a minimum of thirty hours (in several sittings) to play.

Adventuring requires 16k on Sinclair, TRS-80, and TRS-80 Color. They require 8k on OSI and 13k on VIC-20. Sinclair requires extended BASIC. Now available for TI99.

**TREK ADVENTURE by Bob Retelle** — This one takes place aboard a familiar starship and is a must for trekkies. The problem is a familiar one — The ship is in a "decaying orbit" (the Captain never could learn to park!) and the engines are out (You would think that in all those years, they would have learned to build some that didn't die once a week). Your options are to start the engine, save the ship, get off the ship, or die. Good Luck.

Authors note to players — I wrote this one with a concordance in hand. It is very accurate — and a lot of fun. It was nice to wander around the ship instead of watching it on T.V.

**DERELICT by Rodger Olsen and Bob Anderson** — For Wealth and Glory, you have to ransack a thousand year old space ship. You'll have to learn to speak their language and operate the machinery they left behind. The hardest problem of all is to live through it.

Authors note to players — This adventure is the new winner in the "Toughest Adventure at Aardvark Sweepstakes". Our most difficult problem in writing the adventure was to keep it logical and realistic. There are no irrational traps and sudden senseless deaths in Derelict. This ship was designed to be perfectly safe for its' builders. It just happens to be deadly to alien invaders like you.

**Dungeons of Death** — Just for the 16k TRS-80 COLOR, this is the first D&D type game good enough to qualify at Aardvark. This is serious D&D that allows 1 to 6 players to go on a Dragon Hunting, Monster Killing, Dungeon Exploring Quest. Played on an on-screen map, you get a choice of race and character (Human, Dwarf, Soldier, Wizard, etc.), a chance to grow from game to game, and a 15 page manual. At the normal price for an Adventure (\$19.95 tape, \$24.95 disk), this is a giveaway.

**PYRAMID by Rodger Olsen** — This is one of our toughest Adventures. Average time through the Pyramid is 50 to 70 hours. The old boys who built this Pyramid did not mean for it to be ransacked by people like you.

Authors note to players — This is a very entertaining and very tough adventure. I left clues everywhere but came up with some ingenious problems. This one has captivated people so much that I get calls daily from as far away as New Zealand and France from bleary eyed people who are stuck in the Pyramid and desperate for more clues.

**MARS by Rodger Olsen** — Your ship crashed on the Red Planet and you have to get home. You will have to explore a Martian city, repair your ship and deal with possibly hostile aliens to get home again.

Authors note to players — This is highly recommended as a first adventure. It is in no way simple—playing time normally runs from 30 to 50 hours — but it is constructed in a more "open" manner to let you try out adventuring and get used to the game before you hit the really tough problems.

**QUEST by Bob Retelle and Rodger Olsen** — THIS IS DIFFERENT FROM ALL THE OTHER GAMES OF ADVENTURE!!!! It is played on a computer generated map of Alesia. You lead a small band of adventurers on a mission to conquer the Citadel of Moorlock. You have to build an army and then arm and feed them by combat, bargaining, exploration of ruins and temples, and outright banditry. The game takes 2 to 5 hours to play and is different each time. The TRS-80 Color version has nice visual effects and sound. Not available on OSI. This is the most popular game we have ever published.

32K TRS 80 COLOR Version \$29.95.

Adds a second level with dungeons and more Questing.

### PRICE AND AVAILABILITY:

All adventures are \$19.95 on tape. Disk versions are available on VIC/COMMODORE and TRS-80 Color for \$2.00 additional. \$2.00 shipping charge on each order.

Please specify system on all orders

ALSO FROM AARDVARK — This is only a partial list of what we carry. We have a lot of other games (particularly for the TRS-80 Color and OSI), business programs, blank tapes and disks and hardware. Send \$1.00 for our complete catalog.

### RAM Pack Crashes

Until recently I have had no problem with my ZX81 with the RAM pack attached. Now the computer crashes while I am typing in a program. The screen goes blank and the program is erased. After unplugging and plugging it in again, it works fine for 10-15 minutes. I have taped the RAM pack securely in place so it cannot move. I do not think the problem is overheating because sometimes it will work for an hour or two before crashing, but other times it will crash almost immediately after running.

Brent Helms  
5411 SW 96 Ave.  
Miami, FL 33165

### Comment:

Should a Sinclair 16K RAM pack that works well on an ZX80 with the 8K ROM have any problems on a TS1000? Mine operates 5-6 minutes and then the screen fills with garbage and eventually flops over full of curved lines.

Jim Mahoney  
RD 4, Box 247  
S. Salem, NY 10590

### Comment:

Both of these situations may be caused by a combination of overheating and

edgeboard connection problems.

The overheating can best be solved with an external voltage regulator (see *SYNC* 3:2, p. 68). Since the regulator requires nearly 2V offsetting voltage, some ZX/TS power supplies may not provide the 9V output under load required for SAVE mode on some ZX/TS computers.

However, by substituting a DPDT switch for the SPST shown in the *SYNC* article and connecting the regulator input to lug 1 of the first set of switch-poles and the regulator output to lug 2 (C) of this first set of poles, the external regulator is shunted out of the circuit for full voltage in this switch position which is used in SAVE mode. For the 7V output used for cooler operation in all other modes than SAVE, connect the regulator GND terminal (3) to lug 2 (C) of the second set of switch poles and connect a 330 resistor in series between lug 3 of this second set of poles and ground (-). The shunt resistor is omitted. Do not use this configuration with power sources greater than 13 WVDC.

The edgeboard connector problems can occur because of oxidation of the soldercoating on the connector strips even when mechanical stability has been secured. Swab both sides of the connector

strip liberally with TV contact cleaner/lubricant and slide the RAM pack on and off several times. Insert the pack fully, then back it off just enough that the contact fingers are not pried open by pressure of the pack case against the computer case.

RAM pack wobble may be prevented in various ways: 1) Mount both the computer and the RAM pack on a flat mounting board (3/4" chipboard is fine) with a bit of picture-mounting tac-dough under each corner of the computer and under the RAM pack legs will ensure they do not move relative to each other. 2) Some have had success also by putting extra-high pads under the computer so that the RAM pack hangs free from the connector. 3) Ribbon-cables with connectors on each end also work well. 4) Hard-wiring and placing both the RAM pack and computer inside a grounded metal cabinet as used with some keyboards is the best approach of all.

### New Pads

My answer to RAM pack wobble was to get some sticky pads at Radio Shack (1/2" in diameter by 1/8" thick) to replace the standard pads. At the keyboard end I put 2 pads 1/2" closer to the expansion port. At the port end, they are 1/2' O.C.

## UNDERSTANDING YOUR ZX81 ROM

by Dr. Ian Logan

SYNC Magazine said: "SYNC readers will recognize Dr. Logan as a major ZX80/81 expert whose writings are well worthwhile. *Understanding Your ZX81 ROM* is no exception. The book falls logically into five parts: a brief review of the Z80 CPU, next a quick introduction to the internal arithmetic and number base manipulations; a discussion of the Z80 machine code instructions grouped by function; a detailed examination of the relevant parts of the 8K ROM; Dr. Logan introduces machine code programming by treating it as an extension to Basic; and complete listings of the more important 8K ROM routines are given as well as the usual tables of machine code language instructions, decimal-hexadecimal conversions, and keycodes. *Understanding Your ZX81 ROM* should be high on your list." Now available for only **\$14.95**

## MACHINE LANGUAGE PROGRAMMING MADE SIMPLE

Michael Roberts, SYNTAX Magazine wrote:

"I wanted to review this book because I'm the person it was written for. I taught myself BASIC and can now do most of the things I want to with it. I felt that Machine Language would be a good addition to speed up some programs and improve display. The idea of Machine Language 'made simple' appealed to me. It's the best explanation of Machine Language for Machine Language beginners I've seen."

Its friendly style is painless reading and analogies help make this language. This introduction is a must." Now available for only **\$14.95**

## NOT ONLY 30 PROGRAMS

is a collection of programs for the ZX81/TS1000. Not only Battles Blackjack, Wall Breaker, Mini 1K Draughts, but also each program includes programming hints, space invaders, PEEK and POKE explained. *Not Only 30 Programs* said "This book can be crammed into Sinclair. ## 21st CENTURY ELECTRONICS Business Series

### A—SALESDATA 2E \$34.95

16K complete sales storage and analysis report for up to 30 customers for a quarter year. Comes in a book form with a master tape and 2 blanks, and complete forms documentation. A hard copy can be made of all the reports.

### B—FILEDATA 2E \$26.95

16K not only files names, addresses, zip, telephone no., but allows you 2 lines of comment per entry. It contains an alphabetical sort and allows you to change any part of any entry. A hard copy can be made of the complete entry or just the mailing address. All Series 2E programs come with full documentation.

### C—PAYDATA 2E \$34.95

16K complete payroll program for 25 people. Includes hard copy mode for pay stubs, and accountant information, automatic overtime calculations for over 40 hrs., and all federal tax deductions are set in the program. There are also instructions allowing you to set your own state taxes. All Series 2E programs are user friendly.

## Screen Display Problems

### RAM Pack Buzzing Sounds

Raymond Fowkes in *SYNC* 2:4 suggested soldering two foil tabs on the underside of the PC board together with a short piece of wire to solve the problem of the buzzing sounds caused by the 16K RAM pack. Is this safe for the computer?

John Torrance  
41 Alpine Pl.  
Kearny, NJ 07032

*Comment by Raymond Fowkes:*

I learned that there was more to the story after I wrote to *SYNC*. My ZX81 was a kit, and it seems that Sinclair left out the instructions for installing the long thin metal grounding strap in the computer (not the RAM pack as a few thought). This raised the resistance in the 0 volt trace just enough to cause noise when the extra load from the RAM pack was added.

Therefore, anyone who does not have a long thin silver strip of metal running across the noncomponent side of the ZX81 may solder a wire to the two large pads of bare foil (labeled TB in Figure 2) on the underside of the PCB. One is next to the edge connector where the RAM pack is attached; the other is in the opposite corner next to the regulator (the 3-prong IC on the component side with the big metal heatsink). Factory assembled units should be OK in this respect, but those with hardware experience who are very careful could further reduce the noise by connecting wires in parallel with other traces, especially the one carrying 5V to the edge connector though this is not advised because of various risks.

*Comment:*

I referred the above question to Raymond Fowkes for clarification. I note from letters by owners of factory built ZX81s that some may have defective solder connections on this strip or else it may not be making proper contact with the metalized coating inside the case. The result is increase TVI, which the 16K RAM pack may raise to an even higher interference level. The solution is to make sure that all the solder connections are secure by reheating them and ensure that the strip is making contact with the case by arching it slightly higher above the board in the center. However, this will not cure the noise which originates in the voltage converter in the RAM pack itself. This feeds back transient noise into the

computer power line as well as radiating RFI if all the grounding strips in the RAM pack are not making proper contact with the metalized coating in the case. Some 16K RAM packs, such as Memotech, do not use this power conversion and so produce less RFI.

The solution involves the adding of suppression around the Zener diodes which originate the most of this noise, but, unless the proper components are identified, the RAM could be disabled. A thin metal box formed to fit over the RAM case and grounded to the TV modulator case (but not touching the edge-board connector) will alleviate the RFI which affects the TV display. Heavy aluminum foil may be used. (See Bruce Kirk's letter.)

### Dark Bands and Noise

The 16K RAM from Apropos Technology worked well on my ZX80 except for considerable noise in the TV display. By covering the ZX80 and module with aluminum foil grounded to the coax to the TV, I reduced the noise. However, when I used the 16K on the TS1000, two darker horizontal "bands" appeared in the TV display, moving slowly and evenly downward. The display itself (symbols and spacing) was not affected although these bands overloaded the TV sync and caused

minor "tearing" of the picture.

Bruce P. Kirk  
RR 4, Box 4033 B  
La Plata, MD 20646

*Comment:*

Your "fix" of the noise problem with the foil shows the need for more adequate shielding in the RAM pack case unless the noise source is corrected by suppression at the internal power converter of the RAM.

The moving horizontal bands in the TV display may be partially from transients going back into the computer along the 9V bus from this power converter noise. Usually such bands indicate inadequate filtering of the DC power supply. This may easily be corrected by connecting a 2200 uF 35WVDC capacitor between the DC power cord leads. However, the loss of TV sync and tearing may indicate a combination of RFI, noise transients on the power bus of the computer, and excessive ripple in the power input. You may have to work on these one at a time.

### RFI Trash

The RFI trash on my portable TV screen is very annoying. However, on my 17" TV the screen is crystal clear. What does my large TV have that my small one does not? Is there a circuit I can build for

# CYBORGWARS

NOT ANOTHER TOY

BUT A COMPLEX SIMULATION OF FOUR MILITARY-INDUSTRIAL ECONOMIES LOCKED IN A DEADLY STRUGGLE FOR SURVIVAL. ONE TO FOUR PLAYERS COMPETE WITH EACH OTHER AND/OR THE COMPUTER. BALANCE OF POWER DEPENDS UPON SKILL IN DEVELOPING RESOURCES, USE OF ESPIONAGE, EXPLOITATION OF ALLIANCES, AND UTILIZATION OF MILITARY POTENTIAL. REQUIRES ZX81 OR TS1000 WITH 16K RAM.

my small set to solve the problem?

Rick Goulian  
1525 N. Euclid, Apt. 121  
Tucson, AZ 85719

**Comment:**

The tuning section and selectivity of the 17" TV may be better or have better shielding. Some TVs are designed for better RF harmonic rejection than others.

1) Be sure that the built-in antenna or rabbit-ears are completely disconnected from the TV input terminals and disconnect the CATV or other antenna leads. Relocate them and the TV power cord and the computer power cord as far as possible from each other.

2) Sometimes it helps to put 2 or 3 ferrite sleeves on both these power cords, respectively, as near the TV and the computer as possible. Wind the cord through the hole several times. (Radio Shack has assorted packages.)

3) The length of the cable between the computer and the TV may be critical with some tuners. The 48" length supplied with the computer is designed to be one-fourth wave-length at the pix frequency of TV channel 3 for maximum signal-transfer to noise ratio. The TV/computer switch box supplied lengthens this enough to provide a match for TV channel 2, in length and in impedance. Clean the switch

contacts by spraying TV contact cleaner/lubricant liberally inside the box and working the switch back and forth.

4) Some 16K RAM packs emit excessive RFI back to the computer and also as radiation. Use the computer only on a non-metallic desk or table, or place it on a sheet of heavy foil grounded to the outer conductor of the TV cable plug or to the TV modulator case. It may help to fold the foil up and around the RAM pack also. (See Bruce Kirk's letter.)

5) When severe TV interference occurs, either from RFI from the computer/peripherals or from being in a strong signal area on the channel used by the VHF modulator or on an adjacent channel, the only real solution may be to replace the VHF modulator with a UHF modulator (see SYNC 3:1, p. 72). Try adding a short patch cable (4-6") to the existing TV cable if the UHF signal to the TV seems to be down.

6) Another solution is get a well-shielded cord for connecting the computer to the TV.

**A ZX81 and an 18 year old Sony**

My ZX81 kit works only with my 18-year old Sony portable TV. It works best with the gain control turned down. With other TVs the ZX81 seems to be putting out too much signal and overdrives the

screen resulting in an unusable, cross-hatched pictures. I have tried turning down the AGC on several TVs as well as a different TV/game box to no avail.

Ross A. Rainwater  
305 Regal Dr.  
Lawrenceville, GA 30245

**Comment:**

The cross-hatching would indicate the problem is RFI rather than overdriving, which in effect is superimposing one or more spurious signals to the TV over the top of the desired one. The Sony gain control apparently reduces these other signals enough that only the legitimate one is visible in the display. Some TVs have better front-end shielding and selectivity and adjacent-signal-rejection than others, which may account in part for the difference in those you have tried.

Small coupling trim-pad capacitors placed in each side of the TV lead-pair in the TV/game switch box might help tune out and attenuate the unwanted signals. Drill small holes in the box directly over the trim-pads so they can be adjusted with the box closed, using a non-conducting tool.

A better solution, however, would be to prevent or shield off as much of the interference as possible at the source. See above for suggestions for RFI problems. ■

# GET LEGIT GET CP/M NOW

## CP/M IS AVAILABLE FOR YOUR TIMEX OR SINCLAIR

CP/M supports the largest single database of micro computer software. IBM\* and Apple\* 'eat your heart out'. In the chart to the right the CP/M bar breaks through the top of our ad. We have not done this just for effect. In fact, the CP/M bar should be seventeen feet long in relation to the two inch TIMEX bar.

Our ready to plug in CP/M system, in an attractive durable metal cabinet with 320K disk drive (expandable to four drives), an RS-232C Serial Port and 64K RAM, costs only \$699. CP/M costs \$69.

## Making Borders and a Bouncing Ball

David Grosjean

We will begin our series on comparative programming with the Panasonic JR-200, the Vic-20, and the TS1000. Our first exercise is to develop step by step the routine for creating a border around the screen and then vary its dimensions. Our second exercise is develop a routine for a bouncing ball. Both exercises are useful in certain types of games.

### Making Borders

Our first exercise is easy on the JR-200 and TS1000 because they have the PLOT command, while the Vic-20 does not. First, let's look at the PLOT command.

On the JR-200, the X axis is along the top (from 0 to 63), and the Y axis is down the left (from 0 to 47). On the TS1000, the X axis is along the bottom of the screen (from 0 to 63), and the Y axis is up the left side (from 0 to 43).

Let's PLOT a single point at the center of the screen. Notice that a rather complicated method of cursor movement is the simplest method for the Vic, while the JR-200 and TS1000 use the easier PLOT command.

```
JR-200:    TS1000:
PLOT 31,23 PLOT 30,21
```

```
VIC-20;
5 PRINT '#';
10 FOR I=1 TO 11
20 PRINT '#####';
30 NEXT I
40 PRINT '#####'
```

Line notes for the Vic:

5: The control character is a clear screen character.

10: The control characters in the

quotation marks are: reverse on, cursor right, cursor down, reverse off.

40: The control characters are: reverse on, one space, reverse off.

To light up this point without any other printing on the screen, use these short programs:

```
JR-200:    TS1000:
10 CLS     10 CLS
20 PLOT 31,23 20 PLOT 30,21
30 GOTO 20  30 GOTO 20
```

To the Vic version above, add 50 GOTO 50. This does not keep printing the point over and over again, but it does avoid printing on the screen.

Now, how can we expand this one point to a whole line? One way would be to use a series of PLOT statements. For example:

```
JR-200:    TS1000:
10 CLS     10 CLS
20 PLOT 1,23 20 PLOT 1,21
30 PLOT 2,23 30 PLOT 2,21
40 PLOT 3,23 40 PLOT 3,21
.
.
.
640 PLOT 63,23 640 PLOT 63,21
```

Obviously, this is very inefficient and cumbersome. We could use a FOR-NEXT statement instead:

```
JR-200:    TS1000:
10 CLS     10 CLS
20 FOR X=0 TO 63 20 FOR X=0 TO 63
30 PLOT X,23  30 PLOT X,21
40 NEXT X    40 NEXT X
50 GOTO 20   50 GOTO 20
```

```
Vic-20:
5 PRINT '#';
10 FOR I=1 TO 11
20 PRINT '#####';
30 NEXT I
40 FOR I=1 TO 22
50 PRINT '#####';
60 NEXT I
70 GOTO 70
```

Line notes for the Vic:

5: Control character is to clear screen.  
20: Control characters are: reverse on, cursor down, reverse off.

50: Control characters are: reverse on, one space, reverse off.

These programs simply draw a horizontal line and, when finished, draw it over and over again.

As long as we are varying X from the left to right of the screen, why not draw two horizontal lines at once, one at the top and one at the bottom? Here are the programs to do this:

```
JR-200:    TS1000:
10 CLS     10 CLS
20 FOR X=0 TO 63 20 FOR X=0 TO 63
30 PLOT X,0  30 PLOT X,0
40 PLOT X,47 40 PLOT X,43
50 NEXT X    50 NEXT X
60 GOTO 20   60 GOTO 20
```

### Vic-20:

On the Vic, drawing one line using cursor movement is fairly easy, but when you get into more than that, it is easier to POKE into the screen memory. From now on, we will only use POKE. In the following program, SM is the start of screen memory, and the control character in line 10 is the clear screen control character.

In lines 40 and 50, the second POKE command POKES into the color memory. This is to insure that what you POKE into the screen memory is not the same color as the background. Now that we are POKING, there are no X,Y coordinates; each space on the screen is numbered consecutively, so our equations for the correct display must change.

```
10 PRINT '#';
20 SM=7680
30 FOR I=0 TO 21
40 POKE SM+I,160:POKE 3
8400+I,2
50 POKE SM+484+I,160:PO
KE 38884,2
60 NEXT I
```

But we want to have vertical borders, too. We can use the same loop by adding two more PLOT statements.

# INTRODUCING EPROM SOFTWARE FOR TIMEX-SINCLAIR COMPUTERS

## MEMOTECH INTRODUCES THREE NEW SOFTWARE PACKAGES FOR YOUR TIMEX-SINCLAIR.

All Memotech software is compatible with both the ZX-81 and TS-1000 computers and comes in its own Memopak case that plugs directly into your computer.

### MEMOCALC

Now there's a powerful tool to assist you with reports and financial forecasts. Memocalc, our spreadsheet analysis software, on EPROM, enables TS-1000 and ZX-81 users to perform complex number crunching routines with ease. With Memotech's 64K RAM a table of up to 7000 numbers with up to 250 rows or 99 columns can be specified. Quick revisions can be achieved by entering new data to your formula. Then, by entering the command CALCULATE, the information is reevaluated and displayed.

Spreadsheet analysis started as an aid to cash-flow analysis, but this powerful tool has now been generalized and Memocalc with its special ability to perform interactive calculations is invaluable in the performance of numerical tasks.

### MEMOTEXT

The Memotext word processor, on EPROM, brings commercial standards of text editing to your computer. Text is first arranged in 32 character lines for the screen with comprehensive editing facilities. On output the user simply chooses the line length for printing and the system does the rest. Used with our Memopak printer interfaces, it

enables output with 80 character lines, upper and lower case, and single and double size characters.

### MEMOPAK ASSEMBLER

The Memopak Assembler, on EPROM, is for those who want to roll up their software sleeves and get down to controlling precisely the power of their computer. It lets you code and edit a source program in the Z80 language, and then assemble it into machine code. You can now write flexible and economical programs, tailor-made in every detail to your own needs, and free from the extravagant use of time and space that goes with the basic high level code.

The editor mode allows you to code directly in the right format, manipulate individual lines and control the exact placing of source and machine code. Routines may be merged or listed (even to a commercial printer with our printer interfaces).

The Assembler mode handles all standard Z80 mnemonics, numbers in hex or decimal, comments and user-selected labels. Be an expert software engineer through this pack and its clear documentation.

### ORDER AT NO RISK.

All Memotech products carry our 10 day money back guarantee. If you're not completely satisfied, return it within ten days and we will give you a full refund. And every Memotech product comes with a **six month warranty**. Should anything be defective with your Memotech product, return it to us and we will repair or replace it free of charge. **Dealer inquiries welcome.** To order any Memotech product use the order coupon or call our toll-free number 800/662-0949.

TS-1000 is a registered trademark of Timex Corp.

# TIMEX MAKES THE COMPUTER, BUT WE MAKE IT TICK.

If you own a TS-1000 or ZX-81 computer and want to bring out the power within it, you'll want Memotech. From easier input to high quality output and greater memory, Memotech makes the add-ons you demand. Every Memotech peripheral comes in a black anodized aluminum case and is designed to fit together in "piggy back" fashion enabling you to continue to add on and still keep an integrated system look.

**MEMOPAK RAM** All Memopak RAMs are directly addressable, user transparent, are neither switched nor paged and no additional power supply is required. You can also choose the Memopak RAM which is just right for your needs. From economy to power. **16K RAM** The Memopak 16K RAM is the most economical way to add memory to your TS-1000. It is fully compatible with the Timex or Memotech 16K RAMs to provide you with up to 32K of RAM. The 16K RAM also offers additional add-on capabilities through its "piggy back" connection. **32K RAM** The 32K Memopak enables you to execute sophisticated programs and store large data bases and like the 16K RAM is fully compatible with Timex's or Memotech's 16K RAMs to give you a full 48K of RAM. **64K RAM** The 64K Memopak is powerful enough to turn your TS-1000 into a computer with capabilities suitable for business and educational use. It accepts such BASIC commands as 10 DIM A (9000). **MEMOCALC** Memocalc, our spreadsheet analysis

software, enables TS-1000 users to perform complex number crunching routines with ease. With the 64K RAM a table of up to 7000 numbers with up to 250 rows or 99 columns can be specified. Quick revisions can be achieved by entering new data to your formula.

**MEMOTECH KEYBOARD** For ease of operation, the Memotech keyboard is a high quality standard typewriter keyboard, with TS-1000 legends. The keyboard is cable connected to a buffered interface which is housed in a standard Memopak case and plugs directly into the back of the

TS-1000 or other Memopaks. **MEMOPAK HRG** The Memopak High Resolution Graphics, with up to 192 by 248 pixel resolution, enables display of high resolution "arcade game" style graphics through its resident 2K EPROM, programmed with a full range of graphics subroutines.

### CENTRONICS PARALLEL AND RS232 INTERFACES

Memotech's Interfaces enable your TS-1000 to use a wide range of compatible printers. The resident software in the units gives the

complete ASCII set of characters. Both Memopak Interfaces provide lower case character capabilities and up to 80 column printing. The RS232 Interface is also compatible with modems and terminals.

**SEIKOSHA GP 100A PRINTER** The Seikosha GP 100A uses a 5x7 dot matrix printing format with ASCII standard upper and lower case character set. Printing speed is 30 characters/second with a maximum width of 80 characters. The printer uses standard fanfold paper up to 9-1/2 inches wide. The GP 100A is offered as a package including cable and

interface. Other printer packages are also available through Memotech.

**ORDER AT NO RISK.** All Memotech products carry our 10 day money back guarantee. If you're not completely satisfied, return it within ten days and we will give you a full refund. And every Memotech product comes with a six month warranty. Should anything be

defective with your Memotech product, return it to us and we will repair or replace it free of charge. Dealer inquiries welcome. To order any Memotech product use the order coupon or call our toll-free number **800/662-0949.**

TS-1000 is a registered trademark of Timex Corp.

**JR-200:**

```

10 CLS
20 FOR X=0 TO 63
30 PLOT X,0
40 PLOT X,47
50 PLOT 0,X
60 PLOT 63,X
70 NEXT X
80 GOTO 20

```

**TS1000:**

```

10 CLS
20 FOR X=0 TO 63
30 PLOT X,0
40 PLOT X,43
50 PLOT 0,X
60 PLOT 63,X
70 NEXT X
80 GOTO 20

```

But a value error occurs in line 50 because X exceeds the maximum Y value that can be plotted. This can be fixed easily by adding a line before 50 to test for a value of X over the maximum.

**JR-200:** 45 IF X>43 THEN 70

**TS1000:** 45 IF X>47 THEN GOTO 70

This final program is one of the shortest ways to draw a border. Of course, if you are using this routine in another program, you would not need line 80.

**Vic-20:**

On the Vic letting the overflow mistake occur as on the other machines would be too risky to the program in memory because we are POKEing. Therefore we must add the overflow checking line (line 45) before we make a possibly disastrous mistake. Several times while we were developing this routine, we completely lost control of the computer and simply had to turn it off and on again. Needless to say, this required much retyping. (If you are writing your own program, you cannot write the test line first; you must do it through testing.)

```

10 PRINT '# '
20 SM=7680
30 A=4
40 FOR I=0 TO 22
45 IF I>=22 THEN 70
50 POKE SM+I,160:POKE 3
8400+I,A
60 POKE SM+I+484,160:PO
KE 38884+I,A
70 POKE SM+I*22,160:POKE
38400+I*22,A
80 POKE SM+I*22+21,160:
POKE 38421+I*22,A
90 NEXT I
100 GOTO 100

```

On the JR-200, color can be added easily by adding a line 5. Try these:

```

5 COLOR 1
5 COLOR 3,5
5 COLOR 2,6,3

```

To add a variety of color to the Vic, change line 30 to:

```
30 A=INT(7*RND(0))
```

In the previous program, instead of having the border print at the edges of the screen, it is possible to let the non X value vary. We will let the distance or increment from the edge of the screen be I. The value of I can be used as the co-

ordinate for the top and left side; however, the right side must be defined as 63-I (JR-200 and TS1000) and the bottom as 47-I (JR-200) or 43-I (TS1000).

This program uses these relationships to draw a series of concentric borders which start at random points in the upper left quarter of the screen. Note that the test to see if the maximum Y value has been exceeded is changed somewhat. Can you explain why?

**JR-200:**

```

10 CLS
20 RANDOMIZE
30 I=INT(23*RND(0))
40 COLOR (INT(8*RND(0)))
50 X2=63-I
60 Y2=47-I
70 FOR X=I TO X2
80 PLOT X,I
90 PLOT X,Y2
100 IF X2-X<=16 THEN 130
110 PLOT I,X
120 PLOT X2,X
130 NEXT X
140 GOTO 30

```

**TS1000:**

```

10 CLS
20 RAND
30 LET I=INT(RND*22)
50 LET X2=63-I
60 LET Y2=43-I
70 FOR X=I TO X2
80 PLOT X,I
90 PLOT X,Y2
100 IF X2-X<=20 THEN GOTO 130
110 PLOT I,X
120 PLOT X2,X
130 NEXT X
140 GOTO 30

```

Again, since we are not using a coordinate system on the Vic, the equations to figure out the parameters of each border are different from the equations of the TS1000 and JR-200. Can you figure out how the equations work? Tip: lines 100 and 110 draw the horizontal lines. CM is the start of color memory; SM is the start of screen memory; B is a random color; I is a random starting point for the borders. Remember also that the Vic screen is 22 by 23 (0 to 21 and 0 to 22).

```

10 PRINT '# '
20 SM=7680
30 CM=38400
40 I=INT(11*RND(0))
50 B=INT(8*RND(0))
60 X2=21-I
70 Y2=22-I
80 FOR X=I TO Y2
90 IF Y2-X<=1 THEN 120
100 POKE SM+I*22+X,160
:POKE CM+I*22+X,B
110 POKE SM+Y2*22+X,160
:POKE CM+Y2*22+X,B
120 POKE SM+X*22+I,160:
POKE CM+X*22+I,B
130 POKE SM+X*22+X2,160
:POKE CM+X*22+X2,B
140 NEXT X
150 GOTO 40

```

**Making a Bouncing Ball**

Our second exercise is a simple one for the JR-200 and TS1000: to produce a ball that bounces off the borders of the screen. At this point, we will deal only

with the JR-200 and TS1000 since the method for doing this on the Vic is vastly different.

Let's start with just four main statements: one to give us a starting point for our plot of a bouncing ball, one to clear the screen, one to plot the ball, and one to repeat the plot.

**JR-200**

```

10 X=2:Y=2
50 CLS
160 PLOT X,Y
190 GOTO 160

```

**TS1000:**

```

10 LET X=2
15 LET Y=2
50 CLS
160 PLOT X,Y
190 GOTO 160

```

This is definitely a long way from bouncing, so let's get the ball moving by adding the following lines. Remember, use SLOW mode on the TS1000 if you want to see the ball.

**JR-200**

```

20 I=1:J=1
90 X=X+1
100 Y=Y+J
190 GOTO 90

```

**TS1000**

```

20 LET I=1
25 LET J=1
90 LET X=X+1
100 LET Y=Y+J
190 GOTO 90

```

As you can see, the same thing happened as with the border program, namely, the values exceeded the dimensions of the screen. To avoid this, we must add four IF statements to test for the screen edges. On the TS1000 version, we combined them into two statements to increase the speed a little. (As you know, SLOW mode really is SLOW!)

**JR-200:**

```

110 IF X>=62 THEN I=-I
120 IF X<=1 THEN I=-I
130 IF Y>=46 THEN J=-J
140 IF Y<=1 THEN J=-J

```

**TS1000:**

```

110 IF X>=62 OR X<=1 THEN
LET I=-I
130 IF Y>=42 OR Y<=1 THEN
LET J=-J

```

What happens when you RUN the program now? Try it and see. Just for kicks, on the JR-200 version add line 150 to change the color of the ball:

```
150 COLOR (INT(1+6*RND(0)))
```

While these programs produce interesting patterns, it is hardly a bouncing ball because the computer does not erase the previous ball position when it draws a new one. Add these lines to do that:

**JR-200:**

```

70 COLOR 5
80 PLOT X,Y
190 GOTO 70

```

**TS1000**

```

80 UNPLOT X,Y
190 GOTO 70

```

Now the program works as it ought to, but you may wish to add a few more lines that give you the opportunity to choose whether the trail of the ball be erased or not. We also added a beep when the ball hits the edge of the screen on the JR-200. Here is the final program:

**JR-200:**

```

10 X=2:Y=2
20 I=1:J=1
30 PRINT 'Leave trail
(y,n)'
40 INPUT A$

```

# TIMEX **sinclair** 1000

- Powerful - fully programmable 2K memory • Portable - 6 $\frac{7}{8}$ " x 6 $\frac{3}{8}$ " x 1 $\frac{3}{8}$ " - 12 oz. • Expandable - Optional 16K RAM module • Single-key entry commands • Educational • Unique syntax-check report codes for error identity • Accurate to 9 $\frac{1}{2}$  decimal places for full range math and scientific functions • Graph drawing and animated display • Advanced 4-chip design combining power, portability and affordable price.

TS1000 INCLUDES: Computer, power adapter, leads/plugs for connection to TV & cassette recorder, TV/computer switch, full instructions, and computing course manual.

**TS1000 . . . . . \$54.95**

## ACCESSORIES FOR **TIMEX** **sinclair** 1000 and ZX81

TS1016 - Expands TS1000 from 2K to 16K of memory. (5 oz.) . \$49.95

TS2040 - 32 Column thermal printer for TS1000 and ZX81 . . . \$99.95

### Keyboard Mask for Your ZX81/1000\* Computer

**FEATURES:**

- Install in seconds. Remove adhesive backing from mask and place over keyboard.
- All characters and symbols reproduced on mask.
- Durable - formed with poly-carbonite sheet-satin finish.

JE681 KEYBOARD MASK

The JE681 Keyboard Mask provides users of the ZX81/1000 series computer the individual feel of each keypad on the keyboard. The mask has a raised outline around each keypad allowing the user to feel and correctly position their fingers onto the keyboard.

**JE681 KEYBOARD MASK . . . . . \$9.95 each**

\*ZX81/1000 is a trademark of Sinclair/Timex

### ZX81/1000\* Keyboard Conversion Kit

JE682-AK KEYBOARD KIT MOUNTED IN DTE-AK ENCLOSURE. LIGHT TAN PANELS WITH MOLDED DARK BROWN END PIECES. SIZE: 14 $\frac{1}{4}$ " W x 3 $\frac{1}{2}$ " D x 3 $\frac{1}{2}$ " H

The JE682 Kit provides users of the ZX81/1000 series computers a full-size industrial keyboard hook-up to their computer. The JE682 Kit allows the use of either the full-size keyboard or the Sinclair/Timex Keyboard. The Kit also permits the simple disconnection of the Sinclair/Timex Keyboard for portable use. The JE682 Kit consists of a full-size industrial grade keyboard with 62 keys, 2 p.c. boards, 18" ribbon cable, DIP socket and 4 rubber feet. The keyboard conversion kit can easily be mounted into the DTE-AK enclosure. This enclosure is large enough to contain the ZX81/1000 computer and the full-size keyboard together. A handy label representing the ZX81/1000 keyboard layout is placed on the enclosure.

**JE682-AK Keyboard Conversion Kit . . . . . \$99.95 ea.**  
(WITH DTE-AK CASE - AS PICTURED)

**JE682 Keyboard Conversion Kit . . . . . \$59.95 ea.**  
(WITHOUT DTE-AK CASE)

**DTE-AK CASE ONLY . . . . . \$49.95 each**

# TIMEX **sinclair** SOFTWARE

### THE ORGANIZER

An information storage program. Store the names, addresses, phone numbers, birthday and anniversary dates of your friends and business acquaintances.

Part No. 032000 . . . . . \$16.95

### THE HOME ASSET MANAGER

A home inventory program that can be very valuable in case of fire or theft. Records date of purchase, place of purchase, description, price, serial number and model number.

Part No. 032009 . . . . . \$12.95

### VU-CALC

This program constructs, generates, and calculates large tables for financial analysis, budget sheets, and projections. An immensely powerful analysis chart.

Part No. 031000 . . . . . \$19.95

### CHECKBOOK MANAGER

A personal or business checking account program to store and sort banking transactions. On 90-minute tape, up to 3,600 transactions can be stored.

Part No. 032003 . . . . . \$15.95

Plays like the arcade game. Hop the frog over traffic, snakes, crocodiles, and treacherous diving turtles before time runs out.

Part No. 034012 . . . . . \$17.95

### SUPER MATH

Drill yourself on addition, subtraction, multiplication, and division with five levels of difficulty. Each problem graphically depicted.

Part No. 033000 . . . . . \$14.95

```

50 COLOR 0,0
60 CLS
70 COLOR 0,0
80 PLOT X,Y
90 X=X+1
100 Y=Y+J
110 IF X>=62 THEN I=-I:BEEP 1
120 IF X<=1 THEN I=-I:BEEP 1
130 IF Y>=46 THEN J=-J:BEEP 1
140 IF Y<=1 THEN J=-J:BEEP 1
150 COLOR (INT(1+6*RND(0)))
160 PLOT X,Y
170 BEEP 0
180 IF A$='Y' OR A$='y'
THEN 90
190 GOTO 70

```

#### TS1000:

```

10 LET X=2
15 LET Y=2
20 LET I=1
25 LET J=1
30 PRINT 'LEAVE TRAIL?'
(Y,N)
40 INPUT A$
50 CLS
70 UNPLOT X,Y
90 LET X=X+1
100 LET Y=Y+J
110 IF X>=62 OR X<=1 THEN I=-I
130 IF Y>=42 OR Y<=1 THEN J=-J
160 PLOT X,Y
180 IF A$='Y' THEN GOTO 90
190 GOTO 70

```

When a trail is left, the plot eventually fills in only every other screen location. How could we modify it to fill in every location? There are two or three ways to accomplish this, some of which produce more interesting effects than others. Hint: try doing it with a random variable or tricky rebounds.

#### Vic-20:

The Vic program for making a bouncing ball is altogether different from the TS1000 and JR-200 versions because we had to use POKE to produce the same effect. Let's start with a few statements to get a ball onto the screen and to make sure that it can be seen against the background. The control character in line 30 is the clear screen control character.

```

30 PRINT '# '
40 X=7680
60 CM=38400
80 B=2
110 POKE X,81:POKE CM,B

```

That is, of course, a very long way from bouncing, so we can get the ball moving with the following lines. As in the border program, we must add the checking lines before you test the program, unless you enjoy subjecting your program to a possible crash. Also, be very certain that you type in the checking lines accurately; they are extremely important. When you are writing your own programs using POKE, you will find that the computer can and will crash. Then you will have to retype your program, if you did not SAVE it first. For experience, try changing the addresses of some of the POKE commands and see what happens. It is not a pretty sight.

```

50 I=23
90 CM=CM+1
100 X=X+1

```

```

120 IF X>8163 THEN I=I
-44
130 IF X<7702 THEN I=I
+44
140 IF (X-7680)/22=INT
((X-7680)/22) THEN I=I
+2
150 IF (X-7679)/22=INT
((X-7679)/22) THEN I=I
-2
190 GOTO 80

```

Now you can modify line 80 to what is below. This new line 80 gives the ball a random color. If the color chosen is white (the starting background of the Vic), a new color will be chosen. This is accomplished by the IF statement at the end:

```

80 B=INT(7*RND(0)):IF
B=1 THEN 80

```

Although this program produces pretty patterns, it is still not a true bouncing ball because the trail is not erased. Line 180 erases the trail by POKEing a space into the last position of the ball.

```
180 POKE X,32
```

Now the program is complete, but you may want more frills. The following program, in addition to bouncing a ball,

gives you the option of erasing the trail or leaving it, and it adds a beep when the ball hits a side. Make sure you type this in exactly as shown.

```

5 POKE 36874,249
10 PRINT 'LEAVE TRAIL
(Y,N) '
20 INPUT A$
30 PRINT '# '
40 X=7680
50 I=23
60 CM=38400
70 A=36878
80 B=INT(7*RND(0)):IF
B=1 THEN 80
90 CM=CM+1
100 X=X+1
110 POKE X,81:POKE CM,
B
120 IF X>8163 THEN I=I
-44:POKE A,15
130 IF X<7702 THEN I=I
+44:POKE A,15
140 IF (X-7680)/22=INT
((X-7680)/22) THEN I=I
+2:POKE A,15
150 IF (X-7679)/22=INT
((X-7679)/22) THEN I=I
-2:POKE A,15
160 POKE A,0
170 IF A$='Y' THEN 80
180 POKE X,32
190 GOTO 80

```

## The Panasonic JR-200 Personal Computer

David H. Ahl

The Panasonic JR-200 personal computer from Matsushita has been several years in the making, and it was worth the wait.

#### Handsome Styling

Outwardly, the JR-200 has modern, pleasing styling. The plastic case measures 13.5" x 8.0" and slants from a height of 1" in the front to 2" in the rear. Finished in silver and matte black in the keyboard area, the case is rugged and durable.

#### Connectors and Switches

An 8-pin D.I.N. connector provides for an NTSC composite video or RGB monitor, while an RCA jack gives an RF signal on channel 3 or 4 at a 75-ohm impedance. On most current TV sets with a 75-ohm F-type input the JR-200 produces a crisp, clear image, almost of monitor quality.

Another RCA jack provides 8-ohm audio output to an external speaker. Audio power is more than adequate; people in the rear of a 100-seat conference room had no trouble hearing the internal speaker during a demonstration.

A second 8-pin D.I.N. connector is for the tape recorder. A DIP switch selects either 600 or 2400 bps. We were pleased to find that the JR-200 performed reliably at 2400 BPS on modest quality (\$19-\$29) recorders over a reasonable range of volume settings on standard tape.

Two other connectors are for a printer and an external bus. Via this bus, the JR-200 has a serial RS-232C port which may be set up for half or full duplex, 7- or 8-bit words, and odd, even, or no parity. JR-Basic does not use the standard format for RS-232C communications. Although data may be transmitted by using the OPEN-INPUT#/PRINT#-CLOSE statements a routine is needed to send or receive data on the end of the line.

#### User-Friendly Keyboard

The keyboard has 63 "Chiclet" style rubberized keys in standard typewriter layout, a 5" spacebar, two double-width shift keys, and a double-height return key. The keys are 1/2" square with standard keyboard spacing.

As on the TS1000, each key can make multiple inputs. The JR-200 has 253 built-in characters: 96 English letters, numbers, and symbols; 5 Greek letters; 63 graphics characters; 79 Katakana (Japanese) symbols; and 10 music and other symbols. All told, this is an exceptionally rich character set, right down to the inclusion of a happy face and stick figure man. All the symbols are formed within an 8 x 8 matrix as on the TS1000.

Although the keys do not provide any tactile feedback, each keystroke is accompanied by a beep. All keys can repeat except CONTROL, SHIFT, RETURN, and BREAK.

CHANGE YOUR  
TIMEX/SINCLAIR 1000 DISPLAY

# KOLORWORKS

LOOK AT THE FEATURES !!!

- ◆ Plugs into ZX81/1000 (edge connector)
- ◆ Latest technology with TMS9918 VDP (32 sprite levels)
- ◆ Module contains it's own memory
- ◆ All text will run on the color tv
- ◆ User defined characters & graphics up to 256x192 pixels
- ◆ Module contains extension of basic commands including: PAPER/INK/BORDER/BIN/SPRITE/OUT/INP/etc.

for \$149.95

KOLORWORKS COMES WITH A LIMITED WARRANTY ON PARTS AND WORKMANSHIP  
USE YOUR KOLORWORKS IMMEDIATELY WITH A GAME CASSETTE FOR \$9.95

This delightful game is designed for hours of fun using some of the color graphic capabilities of KOLORWORKS. The cassette also contains a short program to familiarize you with some of the commands and graphics.

Enjoy Game Fun With

## GAAMWORKS

THE SOON TO BE RELEASED GAME MODULE (proto-type stage) WILL OFFER SOUND, ROM CARTRIDGES AND JOY STICK PORTS FOR YOUR TS1000/ZX81.

- ◆ THE SOUND will be of arcade game quality which you can program for music, animals, transportation (auto, train, airplane, etc.) and machine sounds.
- ◆ ROM CARTRIDGES will have up to 8K of ROM using either 2716, 2732 or 2764 EPROMS. We will have pre-programed cartridges and blank cartridges which you can program. We will be offering a service to burn EPROMS from your cassettes.
- ◆ JOY STICK PORTS will allow for the use of two "Atari" compatible joy sticks.

SORRY PRICE IS NOT AVAILABLE AT THIS TIME! GAAMWORKS WILL BE AVAILABLE BY MAIL ORDER FOR FURTHER INFORMATION, SEND \$2.00 (Credited to Order).

At this time KOLORWORKS and GAAMWORKS is available only by mail order.

## Screen Display

Like the TS1000, the screen display is 32 × 24, and PLOT gives medium resolution of 64 × 48. However, very high resolution images, up to 256 × 192, are possible with LOCATE (x,y) which can address each of the 768 locations.

PLOT is also used with COLOR to select character color, background color, and display mode. Four display modes are available: normal, user-defined characters, inverse color of previous characters, and alter background color for positions following the cursor. When we got the hang of it, we found the COLOR command very powerful for producing interesting, and occasionally bizarre, effects.

Eight colors are available for foreground and background use: blue, red, magenta, green, cyan, yellow, white, and black.

## Sound

While the JR-200 is theoretically capable of producing tones from 0 to 65535 Hz, realistically, the usable sound range is about five octaves, an impressive achievement in a computer of this size. The simplest way of producing sound is with BEEP 1 which turns on the beeper (880 Hz or A above the middle octave).

The next step up is SOUND (P,L) in which P is the pitch in Hertz (0 to 65535) and L is the length of the tone in milliseconds (0 to 255). This is very easy to use in a program.

More complicated are the PLAY and TEMPO commands which permit playing tunes with up to three parts over a 5-octave range at any imaginable tempo. Notes are stored in memory and may be played either in foreground (pauses program) or background (program continues) mode.

## JR-200 Basic

JR-Basic is not Microsoft Basic, but it is not far away either. Most of the commands, statements, and functions are identical or very similar. Let's look at some of the more interesting and novel features.

JR-Basic has immediate mode and will execute most Basic commands directly from the keyboard singly or in groups (separated with a colon) as long as the maximum line length of 80 characters is not exceeded.

When the JR-200 is fired up, a copyright notice appears along with the number of free bytes. In all configurations, 2052 bytes are reserved for the Basic work area and the remaining RAM is available to the user. User memory can be expanded to 40K. Basic occupies 16K of ROM while video RAM, I/O, and the built-in character set use another 6K plus.

JR-Basic requires that Basic keywords be separated by at least one space or a colon or semi-colon from other characters. This enhances the readability of finished programs.

Numeric values can range from 2.9<sup>-39</sup> to 1.06<sup>98</sup> and are stored and displayed with nine digits of accuracy. Both numeric and string variable arrays can have one or two dimensions. Unfortunately, variable names are restricted to two letters or a letter and a number.

All the standard operators are available: arithmetic, relational, logical and string concatenation. LET is optional.

RUN performs its usual function but can also be imbedded within a program to run another program or to run the existing program from any specified line number, e.g., RUN 480. When used with a filename (RUN "Border"), it will load the program from tape and then run it.

The functions HOPS and VPOS return the current horizontal and vertical position of the cursor respectively. PEEK and POKE function as on the TS1000. An unusual function is VARPTR which returns the memory location where a particular variable is stored.

## On-Screen Editing

A delightful feature of the JR-200 is full on-screen editing. To correct a mistake or make a change you simply list the line or group of lines to be changed, and move the cursor with the four directional keys to the character to be changed. Then type in the change or use the insert, delete, or rub out keys. You then move the cursor to the end of the line and type RETURN. Whoosh; the change is made.

FIND searches for a string of characters and then lists the line(s) with that combination of characters. LFINd performs the same function but lists the lines on the printer.

## Tape Handling and Files

LOADing and SAVEing are done as on the TS1000, but there are some additional commands.

MSAVE and MLOAD permit files or other material to be saved and loaded directly from and to memory.

MERGE enables loading one program at the end of another.

VERIFY checks to see if a program in memory and on tape match.

PRINT # stores files of data (not programs) sequentially on tape, and INPUT # reads back the data. While sequential tape files are not nearly as handy as random access disk files, the 2400 bps I/O speed is quite tolerable.

## Printed Output

The JR-200 has five printer com-

mands: LPRINT and LLIST as on the TS1000; HCPY which is the same as COPY on the TS1000; TAB which tabs over from the left margin; and SPC which spaces over from the last cursor position.

## Joysticks

Two DB-9 sockets accept standard Atari-type joysticks. Values from them can be read into programs by means of the STICK function.

## Monitor Commands

The JR-200 allows machine language aficionados to get into the monitor and the assembly language.

The monitor has only three commands: D, M, and G. D displays 128 bytes of memory from the location from the address specified and allows you to alter them. G begins execution of an assembly language program from a specified address. Memory locations are all in hexadecimal.

## Software and Support

Panasonic is sincere in trying to provide support for the JR-200. All the early machines have been put in the hands of software developers such as Datamost—a smart move for getting third party software on the market. Also Datamost has produced a version of their book, *Kids and the Apple*, for the JR-200. Likewise, we are in the process of producing a volume in our ideabook series for the JR-200, *The Panasonic JR-200 Ideabook*.

On the other hand, the preliminary JR-Basic manual is tough going, has very few programming examples, and could in no way be considered user-friendly. We are told that the Datamost book will be supplied with the JR-200 as the Basic programming primer.

## In Summary

The Panasonic JR-200 is one of the nicest new computers to make the scene in some time. Attractively styled and easy to use, it boasts an excellent, if not standard, Basic language. The graphics are very approachable and, although resolution is not exceptionally high, the character set is excellent and allows the creation of detailed images. The keyboard is among the best of its type and the separate cursor movement keys make on-screen editing a joy. The JR-200 is cassette tape oriented and uses it well for program and data storage.

Peripherals, documentation, software and support are, at this time, question marks although Panasonic appears to be moving in the right direction on all fronts.

At the suggested list price of \$350, the JR-200 is an excellent choice. ■

# letter from england Stephen Adams

Dear Readers,

The number of computer shops selling small micros is growing daily as is the number of different computers available. But one advantage none of them except the ZX computers seems to have is SYNTAX checking (that annoying routine that tells you that you have made a mistake and that the computer will not accept the line) on entry. Also most of them have made economies along the way, so that user-friendliness goes out the window, so I still think you have to go a long way to beat a Sinclair!

By the way, did you know that a computer magazine which does comparisons between various computers month by month for the business man compared the ZX81 with the brand new, very expensive IBM Personal computer and found that on some arithmetic examples the 1K machine was faster than the 16 bit 128K

IBM machine! and on another 16 bit 128K RAM machine only 1.6K was left for the user to program with after the machine had taken up its demands on the RAM for running the computer. This is about the same as the TS1000!

## Software Developments

### Software Libraries

A lot of argument has developed recently in England about a new set of companies called software libraries. They lend you tapes (after you have paid a small membership fee) of your favorite software for a period of a week or two to see if you want to buy it. If you do, then you get a discount on the purchase price of the tape. If, however, you want to try another tape, then you pay a small fee, varying from £0.50 to £1.50 to exchange the tape.

Software companies are, of course, not in favor of this system as it stops direct sales of tapes to the user. This is because the libraries can use the same tape over and over again. The libraries say that they ban copying by any of their members. However, it is becoming so easy to copy ZX81 and Spectrum tapes that they cannot guarantee it.

Some software companies have refused to deal with these libraries and have even started court proceedings over the matter. They say the hiring of tapes is prohibited by the copyright law and that the libraries are breaking it by encouraging copying of their tapes by making it so cheap. Since the cost of a blank tape is only £0.50, copying a tape costing over £3.50 for a friend becomes tempting and profitable. The question of whether copyright applies to computer program tapes has never been settled in court.

This, of course, worries not only the

## Assemblers convert machine code written in mnemonics to the numbers the CPU will accept.

ZX software producers but also companies like Commodore (Vic-20/64 and Pet) and Atari.

However, the buy 'n' try scheme reduced its buy back period to one month which suited the software companies and the case never went to court. It would have been nice to see a precedent set as regards software piracy and copying. Both sides would have something to go on. The Law has a very grey area here.

### Compilers and Assemblers

Another new market is the increase in software utilities such as Basic compilers for the Spectrum. These allow you to convert a very SLOW Basic program into a super fast machine code version. However, they do suffer from two problems: 1) the compilers cannot handle strings and floating point numbers (only integers), and 2) the final code contains what is called "RUN TIME routines" without which the code will not work. These "Run Time Routines" are copyright, the compiler writers claim; and, since they must be included in every machine code written by a compiler, they claim you

must ask their permission (and pay them a fee) before selling that program. This sounds a bit daft as the compilers themselves use Sinclair's ROM routines (which are copyright), but they don't pay Sinclair a penny!

Another useful utility is an assembler. This converts a machine code written in mnemonics (a bit like Basic) into the numbers the microprocessor will accept. It also allows you to use variables called LABELs which specify a routine or area of memory to be sorted out later.

A very good assembler for the Spectrum is called ZEUS from Crystal Computing and is written in line numbers, just like Basic. It also has a full screen editor which allows you to use the cursor keys to delete or add text in any part of the screen. The text (or source file as it is known) can be printed on to the Sinclair printer or SAVED and LOADED separately from the assembler. The assembler also allows you to locate the code anywhere in memory or to assemble it for running somewhere else (in case the area you want is being used by the assembler). A monitor is also included which allows

you to view and alter memory with the same full screen editing. It also includes a hex to decimal and decimal to hex calculator. It makes writing machine code as easy as Basic as it reports any errors found in assembly or elsewhere. A disassembler is also available from Crystal to complement the assembler.

### Imagine Software

Imagine Software has surprised the news here by paying programmer £35,000 a year to write games for them. Imagine is a breakaway group from Bugbyte who decided to go independent and is now into a multi-million pound turnover business. Their fame is based on the fact that all of their games are new ideas, not rehashes of arcade games. *Arcadia*, *Schzoids*, and *Wackey Waiters* are some of the best selling machine code games around and must be the craziest! *Wacky Waiters*, for instance, requires you to deliver food to the guests in the diner, dodging the boss and drunks, and not spilling the drinks on the way. Imagine also promotes the designers of the games by naming them on the software pack-

### ARE YOU HAVING PROBLEMS UNDERSTANDING THE MANUAL?

**No problem. Understanding Sinclair Basic is a newly developed learning aid which displays and demonstrates 54 Sinclair Basic commands. Basic program lines are displayed and simultaneously run on a split screen. Go as fast or slow as you like because the program waits at each line for your cue to continue. Repeat each program as often as you like by pressing a key. Written in machine language and basic, Understanding Sinclair Basic gives you a powerful tool with which you can unlock the mysteries of Basic programming. 16K required.**

# Joysticks must now be programmable or have a conversion tape to fit the popular games.

aging. And what is so special about their programmer? He has only just left school and at 16 cannot apply for a credit card or a bank account to put his money in! A wide variety of software is now appearing for the Spectrum from astrology to music composition. The music composition program, for instance, allows you to write the tune on the staff (music bars) which appears on the screen in note form using very good graphics. Tunes can be stored and played back either as BEEPs or using an external 8910 sound chip which gives three notes, envelope, and noise. This program should run quite effectively on the TS2000 as it should have one of these chips built in.

## Weekly Computer Magazines

At least one of the weekly (yes, I do mean weekly!) hobby microcomputing magazines has taken a stand. They will not accept any advertising from software libraries that do not have an agreement with software houses whose tapes they are using.

The number of weekly magazines for hobby computing has recently increased

to three with the advent of *Home Computing Weekly* (from the Publishers of *Computing Today*) and *Personal Computer News* (from the publishers of *Personal Computing World*). *Popular Computing Weekly* had been launched in April 1982 by Sunshine Publications. Micros and their products are now moving so fast that it only takes a week for the whole situation to change. These are not trade papers as they contain reader letters, programs, and advice, all for £0.35 a week!

## Hardware Developments

### Joysticks

The main features of the hardware side seem to be that joysticks must now be programmable or have a conversion tape available to fit them into the most popular games. Some of the major companies have even been persuaded to write into their games a piece of software to use joysticks made by Kempston Microelectronics. AGF is one of the companies whose joystick has now been made pro-

grammable. It takes an ordinary Atari type joystick and converts it to operate the same as pressing any key, so there is no conversion required in software for any new game.

### Printer Interfaces

Printer interfaces for the Spectrum have also been making their presence felt in large numbers to complement some of the commercial software available. TASWORD, a very fast 61 character per line, stores its text on tape (Sinclair's microdrives still have not made an appearance). Originally it could print out only on the Sinclair printer, but Hilderbay and others have now produced an interface box with a centronics cable which will operate through TASWORD and its own driver software to print out on a full-sized printer. The graphics characters can be reprogrammed to give control characters such as underline, proportional text, enlarged and double height characters under user control. Also 132 or 80 characters per line make a great difference in formatting a page of text so that it looks a professional job.

## CLICK! with the KRADLE \$195 INTRODUCTORY PRICE

Full-sized, 50-key keyboard, 64K bytes of RAM and more in a compact metal case that holds your fully assembled ZX-81/TS-1000.

KRADLE's conventionally styled keyboard uses tactile "click" switches, a full space bar, double width keys for shift and enter.

Nine extra automatically shifted keys: Function, Graphic, Edit, Delete, List and Cursor Arrows.

Improved compatibility memory design lets KRADLE use all 64K.

Cassette enhancer makes recorder volume of less importance.

Joystick connector accepts ATARI 2600-type joysticks, mimics the Graphic & Arrow keys.

Pilot light shows power on and reset circuitry prevents operation under marginal conditions.

Supports two options: the KRADLE Communicator serial expansion with real RS-232 capability and the KRADLE Manipulator parallel expansion for digital I/O (adaptable to parallel printer port).

CIRCLE 40 ON READER SERVICE CARD

CIRCLE 67 ON READER SERVICE CARD

Three Centronics printer interfaces have been produced for the Spectrum. Softest's interface is designed to work with the four color Tandy (Radio Shack) Pen Printer which can draw diagrams under software control. The other two are designed to allow you to use any parallel printer to LPRINT, LLIST and COPY from inside a Basic program. Both use Sinclair's own Basic commands to control the output to the printer, so no USB calls are required.

EuroElectronics interface box contains a ROM which changes LPRINT and LLIST commands to print on the centronics printer instead of the Sinclair's. LLIST, however, lists until it overflows on the printer which gives sloppy listings unlike what appears on the TV screen. It also cannot handle graphics or special characters like the underline symbol. To COPY the screen means LOADING a tape which puts a machine code program above RAMTOP and a modification to the GP100 type printers to remove the automatic carriage return facility. If this is not done, you get a blank line between each character line. The interface costs £53.48 and is so simple to use that all the instructions are written on the bottom of the interface box.

The second interface, from Kempston Electronics, requires a machine code pro-

gram of 650 bytes above RAMTOP. A Basic program modifies the machine code to suit your printer and your program. Once this is done, the Basic program can be dispensed with and only the machine code LOADED when required. The Basic program allows you to select what characters will be printed instead of graphics, what type of printer you have (different printers require different codes for double width etc.), and, best of all, printer line length. You can specify a 32 column line length so that it prints out the listing just like on the TV screen. The use of a Basic routine for COPY, however, is a bit disappointing as it is so slow. This is the most user-friendly interface I have found so far, cost £49.

#### Modems

One of the electronics component companies has introduced a modem and RS232 interface for the ZX81 (and soon the Spectrum) to work 300 baud over the telephone line. The restrictions on modems over here are rather stricter than in the USA and hence the delay. PRESTEL is still one of the promised facilities available when we get the right modem.

#### Tape Copiers

Tape copiers seem to abound, and it would seem there is no way that a pro-

gram on tape cannot be copied. Most of them work on the fact that the Spectrum allows you to copy any part of the memory to tape. So, if you can write a program which will load any program as machine code and then SAVE it again as an area of machine code, you end up with an exact copy, whatever the software companies try to do.

The best copier I have seen is called ZAP 2.0 which is produced by Scimitar Software. Copying is, of course, illegal, but sometimes it is necessary to make a back-up copy of your software in case the tape recorder screws the tape up.

## Sinclair Developments

The Spectrum was launched in Europe (very quietly) in April 1983 although some people had been arranging to get some directly imported through friends. Each country though wants programs and devices written in its own language and so the importers must do the conversion as most of the software houses do not change their software from country to country. As long as this keeps up, the European user will be short of both software and hardware that is not home produced.

RAM upgrades for the Spectrum have been dropping in price, some are now as

low as £20 for the Model 2 machines. Sinclair has dropped the supply of RAM boards to Model 1 users due to the fact that he cannot compete with independent companies prices (the Model 1 needs a PCB instead of just the ICs as there are no sockets for RAM chips).

Sinclair has also dropped the micro-drive for the moment, but has promised that the first 100,000 purchasers of the Spectrum will be given the first chance to buy them when they are available. He has also dropped the modem that was going to interface to the telephone line to pick up PRESTEL, a nation wide database run by Britain's telephone company.

This has disappointed the producers of a special service called Micro-Net 800 who have had to look elsewhere for modems for the Sinclairs. Other machines can already be connected up via an RS232 interface using an acoustic modem and some specially written software. The idea of Micro-Net was to sell or give away software over the phone lines as well as providing an information service similar to the Source in the USA. The service would cost approximately £100. This included the price of the modem and software to run it over the membership period of a year. At least 100 free programs were to be made available for each type of microcomputer and at night access to the

Micro-Net would only be the cost of a local phone call.

Sinclair has reduced prices over here to £39.95 for the ZX81 and £99.95/£129.95 for the 16K/48K models of the Spectrum.

The companies I have mentioned are all in England and are listed below.

## Glitchoidz Report

### Connecting a Monitor to the TS1000, 3:4.

The schematic should show a line from Gnd to the shielded cable as in the diagram below.

## try this

"Try This" features short programs to show off your computer, impress your family and friends, and tickle your imagination when SYNC arrives at your place. Send your contributions to: Try This, SYNC, 39 E. Hanover Ave., Morris Plains, NJ 07950.

### 8K ROM; 1K RAM

Type in the following lines:

```
1 FAST
2 SLOW
3 FAST
4 POKE 16427,1
5 CONT
```

Press RUN and ENTER. Observe the results. Can you figure this one out? Our thanks to:

Michael Allen  
48 Deerpath Rd.  
Chalfont, PA 18914

### 8K ROM; any RAM

Type in the following lines:

```
10 FOR X=0 TO 31
20 LET R=INT (RND*5)+10
30 FOR Z=R TO 20
40 PRINT AT Z,X;" "
50 NEXT Z
60 PRINT AT INT (RND*(17-R))+R,X;" "
70 FOR Q=5 TO R-1
80 PRINT AT Q,X;" "
90 NEXT Q
100 NEXT X
```

Put the computer in SLOW mode for best results. Press RUN and ENTER. Observe the results. After you have digested the display, try the variation in the following lines:

```
10 FOR X=0 TO 31
20 LET R=INT (RND*8)+10
30 FOR Z=R TO 20
40 PRINT AT Z,X;" "
50 NEXT Z
70 FOR Q=5 TO R-1
80 PRINT AT Q,X;" "
90 NEXT Q
95 PRINT AT INT (RND*(R-7))+5,X;" "
100 NEXT X
```

Press RUN and ENTER. Which variation do you prefer? Our thanks to:

Tuan Ton  
6837 Carnegie Dr.  
Richmond, VA 23226

### 8K ROM; 1K RAM

Let's try Eric Chandler's "Try This" again (SYNC 3:4):

```
20 FOR N=1 TO 5
30 PRINT CHR$(38+INT(RND*26+.5));
40 NEXT N
50 PRINT "###";
60 GOTO 20
```

Press RUN and ENTER; press CONT and ENTER for another screen. What happens here?

Line notes:

20: 5 letters

30: A random letter A-Z

50: 3 spaces after each word (8 \* 4 = 32 = a full line).

Our thanks for the correction to:

Eric Chandler  
1523 Club Terr.  
Lynchburg, VA 24503

The "Resources" column lists new products for Timex/Sinclair users. Suppliers and users are invited to send brief product descriptions and details for ordering to: Resources, SYNC, 39 E. Hanover Ave., Morris Plains, NJ 07950.

## Address Change

Biocal Software, Inc.  
167 Wilson St.  
Petaluma, CA 94952  
(800) 237-8400, x70

Note: Biocal customers who bought tapes prior to April 1983 which would not LOAD can return the tape plus \$1 for s&h for an updated tape with documentation.

## Services

### Repair Service/Maintenance Agreements

Renewable maintenance agreement keeps your system running. The only Sinclair Research Ltd. authorized service center in the nation. For further details, write to:

MicroSync Services  
Box 2015  
162 Marlboro St.  
Keene, NH 03431

## Programming Aids

### Program Name Reader

Reads all names of programs on tape; prints to screen or to printer. Sees names one at a time as they are read from tape. Operates from REMark statement at 16514. Add \$1 for customization to another location. 1K MC. Unusual bonus program included. Listing: \$1 plus long SASE.

### Multiple Programs in Memory. 2K RAM.

Store from 2 to 47 programs depending RAM. Allows programs to be swapped in a split second. Memory is divided into uniform sections; so programs must be roughly same size. Customized version that resides in 8K to 16K

block: \$1 extra. MC. Listing: \$1 plus long SASE.

John Richard Coffey  
PO Box 448  
Scottsburg, IN 47170

### BEST Computer Coach

Audio instruction tapes and computer program tape package. Presents audio-visual show for teaching the meaning and relationship of commonly used computer terms. For TS1000, but versions available for other computers. Write for information. \$19.95.

Boston Electronic  
Systems Training  
1420 Providence Hwy.  
Norwood, MA 02062

## Engineering

### Passive Solar Design Pack

Calculates heat loss, solar gain, solar fraction, storage mass. \$87.85. SASE for list of programs.

### Surveyors Travers Correction

Adjusts angles turned, bearings, error of closure, area of plot, for closed, loop travers. \$52.85. SASE for list of programs.

MCS Software  
2816 Edmond St.  
St. Joseph, MO 64501

### Aircraft Performance Program

Charts climb rate vs airspeed to make performance comparisons of aircraft under varying conditions of weight, power, and altitude. Booklet with listing, explanation of all equations, and a tabulation of specifications for 250 production and homebuilt aircraft: \$7.95.

Robert Fingerle  
PO Box 7793  
Fremont, CA 94537-7793

## Electronics/Radio

### Electronics Engineer

Menu driven program for the electronics hobbyist or engineer; covers voltage division, LED voltage dropping, resistor color codes, and Ohm's Law. CC and instructions: \$4 pp. (money order).

Steve Dinstbier  
1159 W. Taft Rd.  
St. Johns, MI 48879

### Electronics Subroutines. Combo II. (FX1002)

Capacitive time constants; current power dissipation inductance; Ohms Law; Joules Law; parallel; series resistance; parallel; series capacitance; etc. \$12.95; \$1 s&h.

JPR Software  
PO Box 4155  
Winter Park, FL 32793

### Morseman 3

Morse displayed as alpha numerics on screen. Training aid; practice for speed and accuracy. Automatic decode option for Morse received by radio to be with suitable interface. Decode, generation of preset messages, random generation for training. Speeds to 40 wpm. \$20; \$1.50 s&h.

D. R. Navigation  
PO Box 151  
Island Station  
New York, NY 10044  
(212) 980-1646, 308-4237

## Navigation

### Computer Navigation

7 programs: Great Circle Sailing, Rhumb-line Sailing, Dead Reckoning, Latitude by noon sight, Longitude by Time Sight, Star and Planet Identification, and Sight Re-

duction. CC and instructions: \$19.95 pp.

Celestial Software  
3010 Warrington Ave.  
Lakeland, FL 33803  
(813) 686-3311

### Radiobeacon Qwikplot

Immediate indication of position obtained from either 2 or 3 RDF bearings. In the latter case, fixed marker indicates median position; flashing plot point shows the limits of the "cocked-hat" indicating the likely accuracy of the observations. \$10.

D. R. Navigation  
PO Box 151, Island Station  
New York, NY 10044  
(212) 980-1646, 308-4237

## Math

### Statistics Pack

Force, moment, couple, friction, vectors, US-SI conversions. \$19.74. SASE for list of programs.

MCS Software  
2816 Edmond St.  
St. Joseph, MO 64501

### Vectors and Hyperbolic

### Functions. Combo III. (FX1004)

Hyperbolic functions; dot and cross product of vectors; vector addition and subtraction; etc. \$12.95; \$1 s&h.

### Mathematics of Higher Order. Combo IV. (FX1006)

Arithmetic progression; area of common figures; complex variables and operations; exponents; derivatives; logarithms; factorials; etc. \$12.95; \$1 s&h.

JPR Software  
PO Box 4155  
Winter Park, FL 32793

### HOW YOU CAN MAKE YOUR COMPUTER TALK.

The PARROT newly introduced by R.I.S.T., gives the power of speech to Timex/Sinclair Computers. This simple to use plug-in speech module is capable of generating all the sounds in the English language. The combination of these sounds, in the order of your choice, will generate an unlimited vocabulary of words, phrases, and sentences as well as an array of sound effects. Piggy-back expandability allows other modules (eg. memory) to be operating with the Parrot simultaneously.

Paul Donnelly had this to say in the April issue of Syntax: "Documentation is professional..."  
"Overall, R.I.S.T.'s Parrot is an excellent unit and performs up to and beyond my expectations."

## GRAPHICS A to Z

This invaluable manual concentrates on graphics programming. For novice or pro with '81/1000 or Memotech's HRG there's something exciting:

- For '81/1000
- 3-D Drawing
  - Shapes
  - Animation
  - M.C. listings
  - Print below or to right of display!

- For HRG
- Terms dictionary
  - Plot 3-D (cover)
  - M.C. control (speed screen fill 34x)
  - HRG disassembly
  - New call addresses

Many techniques for Basic programs. Later chapters take you carefully into Machine Code. Tired of pulling your hair out over other Machine Code texts? These chapters are well-written with simple examples to get you into the world of fast graphics. 17.95 ppd

## PROGRAMMING FORM PADS

- All lines including edit lines
- Not half sheet—full 8 1/2 x 11 premium erasable paper
- 50 sheets per pad
- Free coded example of W.C. Fields
- Window Card for easy reading

PADS 2.49 ea. (+ .75/pad P&H)

16K

'81 or 1000

## Zxak-man!

At last a version with attention to detail. Zxak is a cute cubical character that winks and chews as he moves. 9 levels and 4 ghouls make for strategy game playing. All in smooth M.C. animation. A must. 14.95

16K  
XON!  
'81 or 1000

## City of Xon!

Scrolls 3 dimensionally. Your shadow follows below as you avoid hazards. Various weaponry help you rack up points. Most impressive graphics your machine can exhibit. In M.C. 19.95

Budd Lake, NJ 07828

### Artillery (SP-101)

Hit a target down range. Range given in miles; you enter bullet velocity and angle of elevation. Points depend on distance of hit from target. Trajectory visible. 4 levels of difficulty. \$9.95; \$1 s&h.

JPR Software  
PO Box 4155  
Winter Park, FL 32793

## Space Games

### Adventure in Space

Survive the trials of space travel; all text adventure; first in a series.

Steve Dinstbier  
1159 W. Taft Rd.  
St. Johns, MI 48879

## Casino Games

### Roulette (SQ-103)

Computer chooses random number between 0 and 36. You bet on 1 number, 2 numbers, 3 numbers, high or low, odd or even, or a dozen. Payoff according to odd for bet. \$9.95; \$1 s&h.

### Craps (SQ-102)

2 dice. Computer rolls and adds the points. You bet on the roll. \$9.95; \$1 s&h.

### Blackjack (SQ-104)

Game of 21 played with 52 cards. Computer shuffles and deals. Objection is to get 21. You may draw additional cards. \$9.95; \$1 s&h.

### Slot Machine (SP-102)

Las Vegas style game. 3 random figures appear in the window. Start with a generous supply of money; play to increase it. \$9.95; \$1 s&h.

### Reddog (SQ-110)

Card game against the computer. 5 cards to a hand. Beat the top card to win. Win amount bet plus same from the pot. Lost bet goes to pot. \$9.95; \$1 s&h.

JPR Software  
PO Box 4155  
Winter Park, FL 32793

## Casino

Craps, Money Boxes, In-between, 1-6, Slot Machines, and Horse Racing. CC: \$4 each pp. (money order)

Steve Dinstbier  
1159 W. Taft Rd.  
St. Johns, MI 48879

## Joysticks

### ZX Joystick

Full details on adding a joystick including fire button. Parts cost less than \$10. \$3; legal size SASE.

Micro Da et Fils  
PO Box 7221 RR2  
Gatineau, Que., Canada J8P 6H8

## RAMs/ROMs/ EPROMs

TS1000 64K RAM Module  
Assembled in America. \$109.95.  
Allow 2-3 weeks for delivery.  
Barlog Software  
401 N. Geyer Rd.  
Kirkwood, MO 63122

## Power Supplies

### Power Switch

Eliminates wear on power jack. 3.25 x 2 x 1 inch black case with heavy duty rocker switch. \$10; \$2 s&h.

K. Roberts  
PO Box 2202  
Davidson, NC 28036

## AC Surge protectors and EMI-RFI Filters

A variety of products designed for surge protection for computers and computer equipment. Write for full details.

Electronic Protection Devices  
PO Box 673  
Waltham, MA 02254

# FOR SINCLAIR AND TIMEX SINCLAIR OWNERS ONLY

If you own a Timex Sinclair, a ZX81, or any other Sinclair computer, you've probably discovered that the big microcomputer magazines cover only the bigger computers. Where can you find helpful articles on the Sinclair? In *Sync*!

*Sync* is the one magazine that's written exclusively about Clive Sinclair's marvelous inventions, the Sinclair computers. And it's the one magazine to read if you want to get more from your Sinclair.

You'll find program listings for games, helpful programming techniques, hardware upgrades, math and science programs, news of new products for the Sinclair—in short, everything you need to use and enjoy your Sinclair to the fullest.

In just two recent issues, for example, we covered:

- Putting a Reverse Character in a String
- How to Double Your Memory
- Least Squares Data Analysis With the ZX80/81
- Space Warp: A Graphics Space Game
- How to Reduce "Blank Screen Time"

- Storing Three-Letter Words in an Array
- Software Review: ZX Galaxians
- An Introduction to Expression Evaluation
- Short Programs Just for Fun
- The ZX81 Parser and User-Defined Commands
- Understanding Floating Point Arithmetic
- Handling Strings from Another Dimension
- Book Review: Understanding Your ZX81 ROM
- How to Add a Keyboard to Your Sinclair
- Translating Other Basics: DEF on the ZX81
- Six Outer Space Games—With Program Listings
- Hardware Review: Sinclair ZX Spectrum High Resolution Color/Sound Computer

If you own a Sinclair microcomputer, *Sync* is the only computer magazine you really need. Subscribe now to *Sync*, and you can save up to 33%! Just complete and return the postage-paid reply card or the coupon at right.

**SAVE UP TO 33%

# TimeWare

A complete line of software and books for Timex Sinclair computers from Reston Publishing Company, A Prentice-Hall Company.

## TimeWare Software

- Strategy Pak** (R0705-5) (R7695-1) \$19.90

### TIMEWARE CHESS

This game has received rave reviews from everyone who has played it. Now is your chance to see if you can beat your Timex Sinclair computer in an exciting game of chess.

### CASINO PAK 1: One-Armed Bandit/Blackjack

Your Timex Sinclair computer is your ticket to a fun-packed night out in Las Vegas. Be prepared to win big on the One-Armed Bandit, or, match wits with the computer dealer in Blackjack.

- Fantasy Pak** (R4608-7) (R3296-2) (R1761-7)

### MONARCH!

\$29.85

In this interactive game your Timex Sinclair computer is your castle. You are in control of the kingdom. If you have what it takes to be king, you can keep your crown. If not, you lose your throne. Features *Fastload*—2 minute loading!

### INVASION FORCE

Protect yourself from a giant alien ship by breaking through the force field to get a clear shot. But watch out! You must also contend with waves of smaller ships that protect the mother ship. Features *Fastload*—2 minute loading!

### ESCAPE FROM SHAZZAR! An adventure game!

Find the temple! It's your only escape! On your journey uncover as much treasure as you can, and find the right keys to get through the doors. But, avoid the deadly fumes, poison, magic, cave-ins, bottomless pits, and more! Get to the Temple and locate the thruster!

- Nowotnik Pak** (R1261-8) (R4953-7) \$19.90

### The NOWOTNIK PUZZLE by David Nowotnik

Watch your computer take a simple pattern and scramble it on the screen. Then the challenge begins! You have to return the puzzle to its original pattern.

### DEMOLITION/TEN-PIN by David Nowotnik

Two great games on one cassette! In **DEMOLITION** it's up to you to stop the moving wall before it reaches the top of the screen. Or, convert your computer into a bowling alley. Your score depends on how hard and accurately you send the ball down the alley.

Each new book and software pak can be used on your ZX-81, Timex Sinclair 1000 or the new Timex Sinclair 1500. Many of the software paks offer the modern 2 minute loading feature.

Just note your choices on this order form and mail the whole page or a copy of it to us at the address below. A check or money order, for the total amount, plus your state's sales tax, included with your order will save you money! The publisher will then pay *all* postage and handling charges.

- The ZX-81 Pocket Book** by Trevor Toms (R9525-8) \$18.95
- 49 Explosive Games for the ZX-81** by Tim Hartnell (R2087-6) \$17.95
- The Explorer's Guide to the ZX-81 and Timex Sinclair 1000** by Mike Lord (R1815-1) \$17.95
- Fifty 1K/2K Games for the ZX-81 and Timex Sinclair 1000** by Alastair Gourlay, James Walsh and Paul Holmes (R1979-5) \$16.95
- Making the Most of Your ZX-81** by Tim Hartnell (R4189-8) \$16.95

### SELF-TEACHING SOFTWARE FOR THE ZX-81 and TIMEX SINCLAIR 1000

by Joseph R. Gladstone

Children from grades 1 through 6 will find basic arithmetic skill instruction and numerous practice programs. Each of the six packages contains 2 cassette tapes with 32 lessons, games and activities, plus an explanatory booklet. This newly designed classroom aid comes handsomely packaged in durable vinyl binders. Six units, each sold separately. Features *fastload*—2 minute loading.

- 1 (R6966-7) \$29.95  4 (R6970-9) \$29.95
- 2 (R6967-5) \$29.95  5 (R6971-7) \$29.95
- 3 (R6968-3) \$29.95  6 (R6972-5) \$29.95

Choose new TimeWare books or new TimeWare game software . . . even TimeWare self-teaching aids for children. All new, and conveniently available by mail!

Order your new TimeWare books and software paks today!

# SYNC at the Library

## TS1000/ZX81 Books

This section contains books specific to the Sinclair and Timex Sinclair computers. The entries are arranged alphabetically by publisher. The entries from a given publisher are arranged alphabetically by title. See the "Directory of Publishers" for the publisher's address.

The book titles may refer to the ZX81 or the TS1000, but the contents will apply to both machines. If you have an unexpanded ZX81, you may not be able to use some of the program in books developed specifically for the unexpanded TS1000 which take advantage of the 2K RAM on board. If you have a TS1000, you can use any of the books written for the unexpanded ZX81. If you have a RAM pack, you should have no problems either way.

Most publishers will accept mail orders, but there is usually a shipping and handling charge either per book or per order. Your local bookstore or computer store will be able to get the books of your choice if they are not carried in stock. You should confirm prices and shipping charges before making your order. This Book Buyer's Guide is not a catalog and we cannot guarantee either the accuracy or timeliness of the information. It is intended to acquaint you with the wealth of book resources available for your computer.

### **Bernard Babani**

*The Art of Programming the 1K ZX81.*

By M. James and S. M. Gee. £1.95.

Programs that fit into the 1K machine. Random number generator; graphics; games of skill; PEEK and POKE; digital clock and reaction timer; character strings. 96 pp.

*The Art of Programming the 16K ZX81*

By M. James and S. M. Gee. £2.50 plus s&h.

Use your 16K RAM pack and printer.

Explains how the extra storage space is used, covers some utilities useful in writing longer programs, games illustrating the extended graphics capabilities in 16K, writing and debugging longer programs, introduces programs for editing data bases and statistical analysis, and using randomness. 136 pp.

### **Birkhauser Boston, Inc.**

*Machine Code and Better Basic*

By Ian Stewart and Robin Jones. \$11.95

This book introduces structured Basic programming, and machine code. Sample programs include: a complete word processor, enqueueing and dequeueing data, and French vocabulary testing. Code routines include: turning the display into inverse video, adding and multiplying, moving data around in RAM. Applies to both the TS1000 and TS2000.

*Timex Sinclair 1000: Programs, Games, and Graphics.*

By Ian Stewart and Robin Jones. \$10.95.

A lighthearted but serious-minded introduction to Sinclair Basic. Includes: setting up the hardware, saving programs on tape, looping and branching, graphics, logic, keyboard control of programs, character manipulation, sub-routines, debugging techniques.

### **E. Arthur Brown Co.**

*Graphics A-Z.* \$19.95.

Complete graphics course for the TS/ZX computers. Chapters on the Memotech High Resolution Graphics module. Topics: animation, 3-D plotting, diagonal scrolling, writing and dissecting uneditable programs, machine code short cuts, and more. Program listings.

*The Timex Sinclair Directory.* \$5.95.

Where to find practically everything for the TS1000 and ZX81. 90 double column pages with complete descriptions

and photographs of memory expansion, keyboard, mass storage, printer, modem, control circuitry, miscellaneous systems. Software from games to serious business. Directory of suppliers.

*ZX81 Basic Book.* \$12.95.

An improved replacement for the ZX/TS operating manual. Gives complete instructions. Cover the topics in much greater detail in an easier to understand writing style. All instructions are followed by examples of actual use. Strings, arrays, and DIM statements.

### **CompuSoft Publishing, Inc.**

*Learning Timex Sinclair Basic for the Timex 1000 and the Sinclair ZX81.*

By David A. Lien. \$14.95.

ISBN 0-932760-15-5

Easy to understand Basic tutorial written specifically for the TS/ZX computers. Leads the user from "turn on" to "advanced programming" with a comprehensive style. 352 pp. 7 x 9. Paperback.

### **Computer Continuum**

*Projects plus Applications Manual*

\$10.

Booklet for use with the Buffered Bus but the designs can be interfaced directly to the computer with some considerations. Includes construction techniques, 8255 programmable port control and counting applications, A/D, Digital oscilloscope program, EPROM programmer.

### **Computer Engineering Services**

*Neat Stuff for Your Sinclair*

1K/16K RAM. \$8.95 plus \$1.25 s&h.

An edited book of some of the finest and most useful subroutines and programs available for the Sinclair user. It has some of the simplest and most wanted hardware additions that anyone can build and install. Softbound.

# NOW. A TS1000/ZX81 PUSH-BUTTON KEYBOARD FOR UNDER \$20.00.

At last there's a really cheap but efficient way of ironing out the TS1000/ZX81's only real bug: its keyboard. The Filesixty Buttonset offers

- A full-travel calculator-type moving keyboard for only \$19.50.

- Installed in seconds. The peel-off adhesive backing means you just register into position and press.

- No messy labels, dismantling or soldering.

- 3 groups of colour keys to pick out shift, numerals and newline.

- Precision moulded in ABS to match your TS1000/ZX81, with contrasting legends for maximum legibility.

Orders to Filesixty Ltd., P.O. Box 1469, Murray Hill Sta., New York, NY 10156

1. Make sure the original keyboard is clean and check that all the keys function.

3. So all you do is remove the protective backing.

2. The Buttonset is held in place by self-adhesive pads.

4. And place it centrally on your TS1000/ZX81.

Cheques/money orders made payable to Filesixty Ltd.

Please send me \_\_\_\_\_ (qty.) Buttonset(s) at \$19.50 each (inclusive of postage & packaging).

**FILESIXTY**

USA35SYNC S/O '83

*The Expandable ZX80 and ZX81, T/S1000 Too!*

\$9.95 plus \$1.25 s&h.

The book for the electronics hobbyist to enable him to add memory, music, speech and a whole lot more. Softbound.

**Creative Computing Press**

*The Best of SYNC, Volume 1*

Edited by Paul Grosjean. \$9.95 plus \$2 s&h.

A collection of over 80 of the most valuable articles, programs, tutorials, and reviews that appeared in Volume 1 (1981) of *SYNC* Magazine. A vital resource for users of the TS1000, ZX81, ZX80 with 8K ROM, ZX80, and MicroAce computers. Topics include: games, math applications, graphics techniques, programming tips and tutorials, translation from other Basics, machine language programming, hardware, reviews, glossary of computer terms.

*Computers for Kids (Sinclair Edition)*

By Sally Larsen. \$4.95 plus \$1 s&h.

Written specifically to introduce children 8-13 years old to the ZX81. Requires no previous knowledge of computers, algebra, or variables. Enables the child to program a ZX81 in less than an hour. Includes a section for parents and teachers. 56 pp.

*Fifty Programs for the Timex Sinclair 1000*

By Leland B. Carter. \$6.95 plus \$2 s&h.

This book features 50 program listings which the TS1000 users (beginners on up) can type into their computers directly and and run. listings include: games, puzzles, mathematical calculations, filing programs, graphics programs, calendar and more. No knowledge of Basic required.

*The Gateway Guide to the ZX81 and ZX80*

By Mark Charlton. \$9.95 plus \$2 s&h.

Practical programming manual for the beginner with the TS1000, ZX81, or ZX80. Furnishes over 70 fully documented programs. The majority have been written for easy conversion from machine to machine (ZX81 to ZX80 and vice versa). Describes each function and statement, illustrates it with a demonstration routine or program, combines it with previously discussed material. 172 pp.

*Getting Acquainted with Your ZX81*

By Tim Hartnell. \$9.95 plus \$2 s&h.

Contains more than 70 programs to help the reader get the most from his TS1000 or ZX81. Game programs include: Checkers, Alien Imploders, Blastermind, Moon Lander, Breakout, Star Burst, and Derby Day. Programs for

cascading sine waves, plotting graphs and tables, data sorting, equation solving, plus the use of PLOT, SCROLL, PRINT, TAB, PEEK, POKE, and much more. 120 pp.

*The Timex Sinclair 1000 Ideabook*

By David H. Ahl. \$6.95 plus \$2 s&h.

50 ready-to-run educational programs demonstrate scores of different techniques for solving problems in mathematics, science, and business. 10 chapters deal with solving problems by formulas and repetitive trials, convergence, recursion, compounding, probability, geometry, science, simulations, and drill and practice. Some problems demonstrate the capabilities of the computer; others identify its shortcomings. 152 pp.

*The ZX81 Companion*

By Bob Maunder. \$9.95 plus \$2 s&h.

For both ZX81 and TS1000 users. Assists in four applications areas: graphics, information retrieval, education, and games. Contains scores of fully documented short routines plus complete programs. Disassembled listing of the ZX81 ROM monitor. 132 pp.

*Katie and the Computer*

By Fred D'Ignazio and Stan Gilliam. \$8.95 plus \$2 s&h.

Explains to a child how the computer works. Katie falls into the land of Cybernia inside her Daddy's computer. Her journey parallels the path of a simple command through the stages of processing. She encounters the multi-legged and mean Bug who lassos her plane and spins her into a terrifying loop. Supplementary information on computers, bytes, hardware, and software. For 4-10 year olds.

*Be a Computer Literate*

By Dr. Sylvia Charp and Marion Ball. \$6.95 plus \$2 s&h.

Uses tasks like mowing lawns, issuing paychecks, and controlling traffic lights to introduce basic computer concepts. A light-hearted informative text tells about the kinds of computers, what goes on inside the machine, the language of the computer, and how computers work for us. The problem of averaging class grades is used to show how to write a simple program. For grades 5-9.

**Data-Assette**

*The Microcomputer's User's Book of Tape Recording*  
\$9.95.

Excellent book explaining how to set up your recorder to achieve reliable results. The book discusses problems that arise and explains how signals are recorded. Coupled with the Vu Meter and Test and Alignment Tape, many hours of frustration can be saved.

**5 1/4" FLOPPY DISC INTERFACE**  
Shugart compatible 43K formatted  
**5 1/4" DISC DRIVE**

**FLEXIBLE RIBBON CONNECTOR for RAM to COMPUTER**

**KEYBOARD**—No soldering, has On/Off switch, internal and external RAM connectors, sculptured keys. Computer fits inside, using only a screwdriver.

**INDESCOMP**  
from  
Sinclair Place  
P.O. Box 2288  
Redmond, WA 98052

**QS SOUND GENERATOR**  
16 Internal records, 3 tone gens., 5 octaves, amp. output, vol. pot.

**CENTRONICS INTERFACE**

**CENTRONICS CABLE**

**QS HIGH-RES GRAPHICS CONTROL**

256 x 192 pixels. Statements — Move X,Y; Plot X,Y; Black; White; Clear; Print A\$; Up; Down; Left; Right; Box X,Y; Scroll; Copy.

**QS PROGRAMMABLE CHARACTER GENERATOR**

Up to 128 characters, switches between standard characters and yours. 8x8 square CHR\$ program included

CIRCLE 59 ON READER SERVICE CARD

## WANT TO BUILD YOUR TS1000 INTO A REAL COMPUTER?

**BASICARE Microsystems** — A family of identical modular units which measure 7.3"x3.4"x.8". The units, which stack on top of one another to build a complete system, may be configured to the user's individual needs.

**PERSONA** — Connects to the rear of the computer with a flexible cable and acts as the **interface for the other modules**. This module, and the others which stack on it, is exceptionally attractive. Neither drawings nor photos do the system justice. It buffers all the computer's signals via the ribbon cable. It then talks to the other modules through a 64 pin ORGANIC BUS. Other modules respond when PERSONA sends their individual SLOTS signals along the bus.....\$59.95

**RAM 16** — 16K memory which can be expanded later.....\$49.95

**RAM 64** — Arranged as 4 blocks of 16K; all can be used under MINIMAP control. On board address decoding allows simultaneous use of many RAMs with MINIMAP.....\$139.95

**MINIMAP** — A mapping device which can expand address space to as much as 1 megabyte. When used with RAM 64 (from 1 to 16 RAM 64s) space is organized into vertical 64K pages. These pages are divided into SEGMENTS labeled: ROM, TOOL, FILE A, DATA, PATH, SLOT, FILE B. It is possible to have many BASIC programs, and several TOOL and DATA SEGMENTS, distributed among different PAGES.....\$55.95

**PERICONa** — General purpose, user programmable 24 lines of input/output. Up to 4 PERICONa can be used together.....\$51.95

**PERICONb** — 24 lines of heavy duty *output* to access and control the outside world. Lines are capable of operating relays or driving long signals. Up to 4 can be used.....\$54.95

**PERICONc** — Centronics printer interface.....\$69.95

**CENTRONICS CABLE**.....\$29.95

*Other modules available* — ROM, GRAPHICS, A-D, D-A, Defineable characters.

*USING THREE OR MORE OF THESE UNITS REQUIRES A HEAVY DUTY POWER SUPPLY.*

**SWITCHED OUTLET BOX** — One outlet is offset and switched for use with your power supply. This allows you to turn your computer on and off without disturbing peripherals.....\$19.95

**HEAVY DUTY POWER SUPPLY** — 9V with ON/Off switch. Much more powerful and cooler running than the standard power supply.....\$24.95

### PAGE SEGMENTS

0000	ROM	8K	Computer BASIC interpreter and operating system.
200	TOOL	(8K)	Machine coded routines or data storage.
4000	FILE A	(16K)	Normal residence of BASIC programs.
800	DATA	(8K)	Used for extra data space or storing long BASIC programs.
A001	PATH	(4K)	Not presently used.
B000	SLOT	(4K)	Used in conjunction with other peripherals.
C000	FILE B	(16K)	Used for display but can be used for BASIC if no display is used.

## SINCLAIR PLACE "COMPACT" KEYBOARD

10¼" x 7" x 1½" (Max.)

FULL FUNCTION  
KEYBOARD

VERY POSITIVE  
FEEL AND SOUND

2 SHIFT KEYS

NUMERIC KEYPAD

SPACE BAR

METAL CASE—  
Fully Shielded!

Single stroke keys: DELETE,  
STOP, EDIT and  
FUNCTION.

SHIFT keys are BLUE with blue legends for shifted operations. FUNCTION key is GREEN with green legends for function operations. DELETE, STOP and EDIT keys are RED. NUMERIC keys are BLUE. Other keys and legends are BLACK. Case is grey. Nothing to solder on, paste on, cut or drill. Only a screwdriver is needed to fit the computer inside the keyboard.

**\$88.80**

## Z-EXCHEQUER

### THE KLUTZ-PROOF BANKING PROGRAM

The best documented, easy to use, banking program you'll find. All you need to know is how to load a tape into your machine and follow SIMPLE directions. Do deposits, checks, charges, debits, automatic teller transactions, reconciliations, etc., 26 categories for checks and deposits. Easily modified, if desired, Simply PRINT command for hard copy.

**\$20.00**

All products guaranteed. We will replace if there are defects. All payments must be in U.S. dollars. Add \$2.00 for third class shipping and handling, in continental U.S. Add \$3.00 for first class or Hawaii, Alaska, Canada. VISA and MASTERCARD add 3%. Washington residents add 8% tax.

## MINDWARE

THIS TAPE WAS  
PREPARED BY THE  
MW-100.

**MW-100 SIDEWINDER PRINTER** — Connects directly to back of the computer. Impact dot matrix. Uses standard 1¼" wide paper roll rather than special, treated paper. Prints 16 character wide line. No command or hardware modifications required to use this printer! 3 modes of printing — MODE 0: Prints each 32 character screen line consecutively on 2 printer lines. MODE 1: Divides screen lines at center and prints left side first, then right side. By taping the halves together you get 32 character line printouts. MODE 3: Prints 16 character lines from screen when screen information is only 16 characters wide. RAM pack and other addons can be attached behind the printer. No interface required.

**SPECIAL**

**\$85.00**

**REPEAT KEY MODULE** — Solders inside case — repeats as long as you hold key.....\$15.00

**INVERSE VIDEO MODULE** — Solders inside case, permits normal black on white or white video on black.....\$15.00

### 30 Programs for the ZX81

By Richard Altwasser. \$9.95.

From the Cambridge Collection are 30 programs for the TS1000 and the ZX81. These programs are written for the unexpanded 1K or 2K machine. Entertainment and learning from one of the designers of tomorrow's systems.

### Dilithium Press

Control Things with Your Timex Sinclair. \$6.95.

Put your TS1000 to work. With a few inexpensive parts, measure the outside world automatically—light, heat, weight, and more. Turn on lights remotely. Add audible alarms and other sounds to your computer's repertoire. Time events. Add a real keyboard and/or a joystick.

How to Use the Timex Sinclair. \$3.95.

Authors assume you know nothing about computers in general or the TS1000 specifically. They tell you what to expect

and how to handle the problems you will encounter. You learn how to set up the computer, how to make it work, where to buy accessories and software, and where to get additional information. Practical advice while steering away from technical tidbits.

More Real Time Applications for the TS1000/2000. \$12.95; with software: \$24.95.

Provides you with some ready to use programs and gives an insight into the techniques on which software is built. Full documentation and detailed commentary. Programs include: Dif, Till, Statistics, Cricket, Carbon Dating, Half Life, Reactions, Gas Laws, Doppler, Triangle, Peristalsis, Electrolysis, Spider Invaders, Notes, Music.

The Secrets of Using the Timex-Sinclair. By Jerry Willis. \$3.95.

Provides an introduction to the computer's basic components; an overview of the things you can do with it; step by step instructions on how to set it up; LOADING and SAVEing; introduction to Basic; information on how to select, buy, install, and use popular accessories; sources of information about your computer such as magazines, books, and users groups. 124 pp.

The Sinclair ZX81. \$11.95; with software: \$24.95.

Practical programs to do real jobs in a variety of environments. Includes: bulk storage, word processor, financial applications, banking uses. Author pushes the ZX81 and casts aside the idea that it is too small for any real computing work.

32 Basic Programs for the Timex Sinclair Computer. \$19.95; with software \$34.95.

Games, graphics, education applications and practical uses. Purpose of the program is described and how to use it is explained. Sample run and complete program with suggestions for changes. Main routines and variables listed.

Using and Programming the Timex Sinclair Computer. \$9.95.

An introduction to programming the TS1000. Complete education in Basic along with neat tricks in Basic applications. Machine language introduced.

### Wayne Green Books

Converting to Timex/Sinclair Basic: A Guide to Translating Basic Programs.

By Stuart L. Bird. \$14.95.

ISBN 0-88006-063-8

Teaches readers how to translate Basic programs written for other Basics to run on the TS/ZX computers. Contains a description of each statement and an example of its use. Differences among state-

## Extend your ZX81/TS1000: Add Memory that won't Forget!

- ✓ ADD YOUR OWN SYSTEM UTILITIES
- ✓ BUILD UP A LIBRARY OF MACHINE LANGUAGE SUBROUTINES
- ✓ UP TO 8K NONVOLATILE RAM
- ✓ USE HM6116LP CMOS RAM OR 2716/2732 EPROM
- ✓ COMPATIBLE WITH 16K RAM PACKS

**\$29<sup>95</sup>**

plus \$1.95 shipping and handling

### ▶ READ THE REVIEWS:

What a super product!...conceived and executed very nicely...and with quality components

(SYNTAX QUARTERLY Winter 82)

8K Nonvolatile memory is a gem! It has so many possible uses...I recommend this board most heartily

(OKLAHOMA S.U.G. Newsletter 1/3)

We found the documentation to be far superior to that (of) most hardware we've received.

(S.U.N. Newsletter Nov/Dec 82)

For versatility this is even better than an EPROM...ranks quite high on the list of "must-haves"

(SYNC Magazine Mar/Apr 83)

### INTRODUCTION

This memory board is designed to fill the transparent 8K block of memory (from 8 to 16K) in a ZX81-16K system. This area of memory is an ideal place to store, either permanently or temporarily, machine language routines or data which are to be used by the BASIC system.

A sample display routine, a program—merging routine, and procedures for storing utilities on tape are included with the kit.

The use of HM6116LP 2K CMOS RAM memory IC's with their own reserve power supply means that routines stored in the RAM are nonvolatile — the RAM retains its memory even when the ZX81 is switched off or reset. Moreover, being RAM, the routines you store in the memory are easily modified. The lithium cell supplied with the board will maintain sufficient reserve power for almost ten years.

### ASSEMBLY

Complete step-by-step instructions in a 20 page manual make assembly of the board easy. Construction takes between two and three hours. The kit (pictured above) is complete with a silkscreened solder-masked printed circuit board, all capacitors, resistors, transistors, sockets, connectors, integrated circuits, and the lithium cell. The board is supplied with one 2K CMOS 6116LP-3 RAM — it will accommodate three more for a total of 8K.

Complete kit with 2K	\$29.95
Additional three 6116LP-3	\$16.00
Bare pc board & manual	\$13.05
Assembled & tested with 2K	\$44.95
Assembled & tested with 8K	\$59.95

ments and various Basic dialects are covered. Over 130 Basic instructions (200 including synonyms) are discussed.

*Using the Timex/Sinclair 1000.*  
By Ralph M. Coletti. Price: TBA.  
ISBN 0-88006-065-4

For those who have mastered the users manual and want to go on. Programming techniques include how to save memory, how to translate into TS/ZX Basic. Programs with home, business, educational, and scientific applications are provided with descriptions and suggestions on how to adapt them. Hardware modifications are also discussed.

#### **J.L. Hartwell**

*Using Your Timex/Sinclair Microcomputer*

By J. L. Hartwell. \$6.95 plus \$1 s&h.

Why not unleash the potential of your personal computer? This publication goes a step beyond the basic programming manual supplied with the computers. It is not meant as a substitute for the owner's manual, but contains information which clarifies and expands upon concepts introduced in the manual. Learn how to translate programs from standard Basic into the Sinclair dialect.

#### **Jenn Products**

*Fifty Nifty Programs for Your ZX81*  
1K RAM. \$9.95.

For the unexpanded ZX81. Written in Basic to facilitate learning; complete instructions. Packaged in an 8½ x 11 spiral bound format which lies flat for convenient referral, these programs feature a variety of graphics and are mostly of the game/activity nature with a few utilities.

*Fifty Programs for the Timex Sinclair 1000*  
2K RAM. \$9.95.

For the unexpanded TS1000, all 50 programs are in Basic with many user friendly statements to facilitate learning. Featuring plenty of graphics, the programs are mostly games/activities with a few utilities. All listings come complete with instructions and are packaged in an 8½ x 11 spiral bound book which lies flat for convenient referral.

#### **Fred Johns**

*Trouble-shooting and Repairs for Your ZX81.*

By Fred Johns. \$4 plus \$1.50 s&h.

Shows how to diagnose problems and make repairs; trouble shooting tips to shortcut diagnosis; diagrams of where to check. DC readings throughout the board. Some test programs. Where to buy parts. List of tools needed, especially a good volt/Ohm meter and LED tester. About 25 pp., 8 1/2 x 11.

#### **K.D.V.H.E. Publishers**

*Sinclair ZX81/Timex Sinclair 1000 Statistics: Twelve 16K Programs Including Multifactor Analysis of Variance.*

By A. H. Wolach and M. A. McHale. \$11; cassettes: \$15; individual programs: \$1.50.

Twelve programs for statistical analysis using t-test and analysis of variance. Extensive directions for entering data; complete example of data input and output for each program; large data sets can be handled with 16K RAM. Tests include: independent groups t-test; correlated measures t-test; one, two, and three way analysis of variance and more. 200 pp.

#### **McGraw-Hill Book Co.**

*Basics: A Guide to the Timex/Sinclair 1000.*

By Henry Mullish. \$9.95.

Introduction to programming that shows readers how powerful and flexible Basic is while working at their own pace. Applicable to the TS1500.

*Bogglers: 22 Smart Games Programs (2K to 16K) in Timex/Sinclair Basic.*

By Graham Charlton, Mark Harrison, and Dilwyn Jones. \$12.95.

Entertainment and utility programs for any TS/ZX machine with 16K RAM. With more memory to work with the programs are more challenging. The programs are fully tested.

*Crunchers: 21 Simple Games for the Timex Sinclair (2K).*

By Henry Mullish and Yin Chiu. \$8.95.

Fully explained game programs written expressly for the TS1000. Games of chance and skill written in Basic. Hours of family entertainment as well as informative introduction to programming. Applicable to the TS1500.

*GOSUBS: 100 Program-Building Subroutines in Timex/Sinclair Basic.*

By Edwin and Shirley Gaby. \$9.95.

A library of programming subroutines, fully tested, immediately usable in larger programs. For TS1000, 1500, and 2000 series (with minor modifications described in the book).

*Science and Engineering Programs for the Timex/Sinclair 1000.*

By Cass Lewart. \$13.95.

25 professional programs for the TS1000 with 2K RAM. Written for the engineer, scientist, or college student. Covers problems in electrical engineering, number theory, computer science, probability, statistics, and operations research. Programs solve, i.e., complicated queuing and reliability problems, find solutions to transcendental and differential equations, find best fitting Lagrange polynomials and work with complex numbers.

*ZX81/TS1000 Programming for Young Programmers.*

By Linda Hurley. \$9.95.

Affords young people the satisfaction of getting hands on the machine immediately and of running programs from the very start. The book is in two colors and has color coded programs. Applicable to all Timex computers.

#### **Melbourne House Software, Inc.**

*The Complete Sinclair ZX81 Basic Course (25895MY)*  
\$34.50.

A comprehensive manual designed to teach you to write and develop Basic programs for the TS1000 and ZX81; no other books or aids are necessary. Easy step-by-step guide with programs and "test yourself" exercises throughout. Every concept and function is fully described by simple programs. Over 100 programs and examples. Reference work for experienced programmers. By Beam Software.

*Basic Course Cassettes (26490MY)*

Two cassette pack: \$7.50.

Contains some of the major programs of the *Basic Course* manual above including games, puzzles, and programming hints and tips.

*The Ins and Outs of the Timex TS1000 & ZX81*

By Don Thomasson.

An invaluable source of information on the hardware aspects of the TS1000 and ZX81. Complete circuit diagram. Full discussion of the unorthodox methods used to put the components together and how they work. Projects to demonstrate the potential of the computer included.

*Not Only 30 Programs (26025MY)*

By Melbourne House. \$9.95.

Gives *Not Only 30* fully debugged programs which will fit into the 1K RAM of the ZX81 (and also the TS1000), but also a detailed explanation of how to write your own exciting programs. Includes: Star Wars, Lunar Lander, Black Jack, and Adventures. Aimed at beginners.

*Machine Language Programming Made Simple for Your Sinclair and Timex TS1000 (25957)*

By Melbourne House. \$14.95.

Go beyond Basic into machine language programming and open computer horizons you never thought possible. Learn how to use the computer's own language and find out about PEEK and POKE. Programming techniques, hints, and tips. Aimed at beginners. 120 pp.

*The Complete Timex TS1000/Sinclair ZX81 ROM Disassembly (20922M)*

By Dr. Ian Logan and Frank O'Hara. \$19.95.

Examines all the routines in the ROM and comments on each. Part A covers addresses 0000h to 0F54h which include all the functions except for the floating point calculator. Part B covers all the routines involved in the "evaluation of an expression" and a detailed explanation of the "floating point calculator." For the experienced programmer.

*Understanding Your ZX81 ROM*  
(25913MY)  
By Dr. Ian Logan. \$14.95.

Illustrates all the facilities of the ZX81/TS1000 monitor, how it works, and how you can use it in your own programs. A section on machine language use and sub-routines will add to your programming power. For advanced beginners to experienced.

**Micro Design Concepts**  
*Timex Sinclair Sourcebook*. 96 pp. \$6.95 plus \$1.25 s&h (\$2.50 s&h for outside U.S.).

Listing of applications, software, add-on hardware, books, catalogs, and magazines. Listing includes author, program description, types of media available, minimum equipment configuration, price and ordering information. Listings by category from worldwide sources. Over 600 listings from over 160 suppliers.

**Oxford Computer Publishing Ltd.**  
*Machine Code Test Tool ZX81 & Timex 1000*  
16K RAM. Cassette: \$19.95.

The ultimate tutor and debug program. Lists and displays machine code instructions as they are written. Ideal for both the novice and the expert.

**Prentice-Hall, Inc.**  
*Programming Your Timex/Sinclair 1000*.  
By Michael & Simon Barnett. \$12.95.

Shows families how to utilize the TS1000 in the home. Everything from doing homework to household management.

*Programming Your Timex/Sinclair 1000 in Basic*.  
By Mario Eisenbacher. \$9.95 (paper); \$17.95 (cloth).

Introduction to Basic programming for those with no previous computer experience. Easy to digest format leads the user through hands-on examples of programs in the early chapters and helps develop skills gradually for more complex programs.

*Programs for Your Timex/Sinclair 1000*.  
By Melbourne House Publishers. \$9.95 (paper); \$15.95 (cloth).

Fully explained programs, scores of programming hints and space saving techniques, and PEEK and POKE explanations. 30 varied programs including Blackjack, Checkers, Battleship, Craps, Simon, Breakout, Mini adventure, Roulette, Starwars.

*30 Games for the Timex/Sinclair Computer*.  
By William Behrendt. \$4.95.

30 games ranging from fortune telling programs to simulation of the ecosystem. Fun and engaging.

*Timex/Sinclair Interfacing: Tested Projects for the ZX80, ZX81, and the Timex/Sinclair 1000*.

By James Downey. \$10.95.

How to construct interfaces with instructions for building a relay controller, a joystick interface, analog to digital conversion and more.

**Que Corporation**  
*Timex/Sinclair 1000 User's Guide. Vol. 1*  
By Joseph C. Giarratano. \$12.95. \$9.95.  
A practical guide for learning to pro-

## BEST KEYBOARD AVAILABLE!

SUN KD-81

### For Your ZX-81/TS-1000

- Includes Shielded Case
- Fully Warranted For 90 Days
- Now In Stock
- Hundreds of Satisfied Customers

**NEW LOWER PRICE**

**\$59<sup>95</sup>**

If you're tired of not knowing whether your data got entered or tired of poking data in with one or two fingers, then it's time to upgrade your ZX-81 to a full size, professional keyboard.

#### KD-81 FEATURES

- Full size keyboard with 41 keys
- Two color silk-screened key tops for easy reading
- Key tops have commands and graphics spelled out the same as ZX-81
- Extra shift key for real keyboard-style typing
- Full size space bar
- Allows touch typing
- Rear cutout allows any RAM or expansion module to be plugged in
- Keyboard comes with own cables
- Keyboard case holds both keyboard and computer with room to spare
- High impact plastic case with vaporized metal shielding
- Easy assembly - no soldering, no modifications
- Measures 10<sup>3</sup>/<sub>4</sub>" x 7<sup>1</sup>/<sub>4</sub>" x 2<sup>1</sup>/<sub>8</sub>"

**Reston Publishing Co.**

*Basics of Timex Sinclair 1000, ZX81 Basic.*

By Allen H. Wolach. \$10.95.

Covers hierarchy of arithmetic operations; entering programs; branching; arrays; loops; multidimensional arrays; simulating library functions; using sub-routines; SLOW and FAST mode; relational operators in logical decisions; plotting; graphics in strings; plotting; slicing; strings in arrays.

*The Explorer's Guide to the ZX81 and Timex Sinclair 1000*

By Mike Lord. \$12.95.

The classic "advanced" book for the TS1000 and ZX81, now available in the U.S. and Canada. New features of Basic; new machine code programming tips and elements of the ROM; 30 games and other programs: application routines; hardware tips; how to add a fullstroke keyboard; and more.

*Fifty 1K/2K Games for the ZX81 and Timex Sinclair 1000*

By Alastair Gourlay, James Walsh, and Paul Holmes. \$10.95.

A new selection of games designed for the TS1000 and ZX81; all in 1-2K. Features such arcade favorites as: Dogfight, Breakout, Outlaw, Galaxian, Roadracer, Alien Invasion, and dozens more.

*Self-Teaching Software for the ZX81 and Timex/Sinclair 1000*

16K RAM. \$29.95 each.

Children from grades 1-6 will find basic arithmetic skill instruction and numerous practice programs. Each package contains 2 cassettes with 32 lessons, games and activities, and an explanatory booklet. A classroom aid. Packaged in a durable vinyl binder. Six units each sold separately. By Joseph R. Gladstone.

*Making the Most of Your ZX81*

By Tim Hartnell. \$10.95.

This handbook focuses on the additional features of the TS1000 and ZX81. New games and useful learning tricks help show how to write programs that really work! It will guide users from start to finish, through each feature and function of the TS1000/ZX81 personal computer.

*Mastering Machine Code on Your ZX81.*

By Toni Baker. \$12.95.

Using this guide, the reader learns the ins and outs of ZX machine code

translation. The handbook reveals the secrets of the ZX81 and shows how to adapt the ZX81 code to the ZX80 machine.

*49 Explosive Games for the ZX81*

Edited by Tim Hartnell. \$10.95.

Galactic Intruders, Checkers, Death Maze, Breakout, Smuggler's Mold, and 44 other favorites, newly adapted for your TS1000 or ZX81. Contains complete programming instructions, plus easy-to-understand game rules.

By Douglas Hergert. \$6.95.  
176 pp. ISBN: 0-89588-099-7.

Discusses the setup, operation, and capabilities of the computer; how to connect it to a TV; benefits of additional attachments; how to program for a variety of tasks, e.g., doing calculations, making bar graphs, drawing pictures on the screen, playing games.

*Timex Sinclair 1000 Basic Programs in Minutes*  
By Stanley R. Trost. \$6.95.

Collection of useful programs to take full advantage of each of the TS1000 function capabilities. Calculate home finances, analyze business and personal investments, investigate real estate options, analyze data, keep records. Ready-to-run programs. No knowledge of Basic is required. Just ENTER the programs and you are ready to compute.

*The Timex Sinclair 1000 Basic Handbook*  
By Douglas Hergert. \$4.95.

Describes and provides examples of each word in the TS1000 Basic vocabulary. Every keyword and function is explained carefully and thoroughly. Short example programs illustrate the use of each command in its syntactically correct form. Special notes provide insight to subtleties and extra features of each Basic word. 170 pp.

*Your Timex Sinclair 1000 and ZX81*  
By Douglas Hergert. \$6.95.

Answers your questions about the set up, operation, and capabilities of your computer: how to connect it to your TV set, the benefits of additional attachments, how to program it for a variety of tasks such as doing calculations, making bar graphs, drawing pictures, playing games.

#### Tab Books Inc.

*A Kid's Manual for Programming the Sinclair/Timex Computers.* \$6.95 (paper) (FPT \$7.25); \$12.95 (hard).

Written by an elementary school teacher with experience in classroom use of computers. Makes programming exciting for any age group. A fun alternative to plug-in games that helps to prepare today's kids for the computer dominated environment they will face.

*Using & Programming the ZX81/TS1000, including Ready to Run Programs.* \$7.95 (paper) (FPT \$8.25); \$14.95 (hard).

Everything the beginner needs to learn and how to put it to work in a variety of applications. Introduction to the essential concepts of hardware and software, the unique characteristics of the TS/ZX machines and a mini-course in Basic programming.

#### TSG Enterprises

*The Watchmakers Guidebook to the Timex Sinclair Computers.* \$4.95 pp.

A directory of suppliers with a brief description of their wares including about 250 software, 100 hardware, 30 ancillary. Directories of user groups, Timex/Sinclair specific magazines, newsletters, directories, books, and articles in other magazines. An introductory chapter about writing a program in Basic.

#### V and H Computer Services

*What can I do with 1K?*

By Roger Valentine. £4.95.

40 programs and routines for the unexpanded ZX81 or TS1000. United Kingdom publication; also published in US by John Wiley Inc.)

*What can I do with 16K?*

By Roger Valentine. £4.95.

11 fully documented programs for the 16K RAM ZX81 or TS1000. United Kingdom publication; also published in US by John Wiley Inc.

*What Can I do with My Timex Sinclair 1000? Lots!*

By Roger Valentine

\$9.95; \$19.95 w/cassette.

56 programs for the TS1000, incl. 35 that run on 1 or 2K, presented with

clear descriptions that teach programming principles by example. Includes sophisticated games, file programs, graphics, personal finance. Also available on optional cassette.

#### John Wiley & Sons

*Byteing Deeper into your Timex Sinclair 1000*

By Mark Harrison. \$12.95.

A step-by-step guide to the capabilities and limitations of the TS1000/ZX81. Teaches TS1000 Basic programming, and includes 37 programs of increasing complexity as examples. Programs for games, math, graphs & graphics.

*Timex Sinclair 1000 Basic: Quick Reference Guide*

By Held. \$2.95.

A reference card to the TS1000 keyboard, commands, functions, statements, symbols, and messages, designed to be kept right with the computer for instant access.

## TS2000/Spectrum Books

The books in this section apply to the TS2000 series. We have listed only those supplied by U.S. publishers here. See Eric Deeson's "The Bookshelf Goes Supernova" elsewhere in this issue for a collection of publishers and titles in the U.K.

#### Birkhauser Boston, Inc.

*Introducing the Timex/Sinclair 2000: Programs, Games, and Graphics.*

by Ian Stewart and Robin Jones.

Look for it in fall 1983.

#### Microscene

*Guide to ZX Spectrum Resources*

Edited by Eric Deeson. \$6.50 (incl. airmail)

Resource collection includes listings of: Spectrum suppliers, books, magazines, user groups, extra memory, add-ons, software, and other supplies. Software section categorized and products are rated in 8 areas on a 6 point scale. 92 pp.

#### Prentice-Hall, Inc.

*Introducing Timex/Sinclair 2000 Machine Code.*

By Ian Sinclair. \$12.95.

Enables users to achieve high speed graphics and advanced game applications on the TS2000. Available in Sept.

*Programming the Timex/Sinclair 2000.*

By S. M. Gee. \$19.95.

Covers everything from elementary

# NOW! A COMPLETE LIBRARY OF QUALITY SOFTWARE FOR THE SPECIAL INTRODUCTORY PRICE OF \$19.95

**SIMPLEX SOFTWARE** INTRODUCES  
THE **HOME-PAC** — 20 PROGRAMS ON  
TWO CASSETTES FOR THE 16K TIMEX  
SINCLAIR 1000, 1500 AND ZX81.

Now for under \$20, you can get a complete collection of 20 quality, reliable and user-friendly programs on two cassette tapes. Although easy enough for beginners to use, even computer experts will find these programs useful. In fact, as useful as other program packages costing several times more.

## Discover the Power of Your Timex Sinclair Computer!

We've developed the programs that you want and need. Useful programs to assist you in home budgeting, education and many other tasks. We've also included recreational and utility programs to help you unlock and explore the power of your computer.

### The HOME-PAC Contains All the Following:

1. **BIORHYTHMS**— Computes and plots four weeks of your biorhythms
2. **ANIMALS**— Popular artificial intelligence learning game
3. **COMPU-SKETCH**— Computerized version of popular ETCH-A-SKETCH toy
4. **MICRO-ORGAN**— 4 octave organ music through your TV
5. **KALEIDOSCREEN**— TV screen becomes a computerized kaleidoscope
6. **ADDITION DRILLS**— 4 skill levels and scoreboard
7. **SUBTRACTION DRILLS**— 4 skill levels and scoreboard
8. **MULTIPLICATION DRILLS**— 4 skill levels and scoreboard
9. **DIVISION DRILLS**— 4 skill levels and scoreboard
10. **COMPUTER AIDED INSTRUCTION**— General purpose education program
11. **STATISTICS**— Computes mean, variance and standard deviation
12. **LINEAR REGRESSION**— Computes regression coefficients and displays equation
13. **VECTOR MATH**— Adds two vectors and provides resultant vector
14. **SIMULTANEOUS EQUATION SOLVER**— Solves system of simultaneous equations
15. **CHECKBOOK BALANCER**— Reconciles check register with bank statement
16. **NET PRESENT VALUES**— Computes net present value of cash flows
17. **AUTO LOAN ANALYSIS**— Computes amount of loan and monthly payments
18. **STAR INVADER**— Mini space invader game
19. **MACHINE LANGUAGE MONITOR**— Utility program enters and lists hex code
20. **RENUMBER**— Utility program, rennumbers BASIC programs
21. **21 PAGE USER'S MANUAL**

**WE FEEL THAT THE HOME-PAC AT \$19.95,  
WHICH RETAILS REGULARLY FOR \$29.95,  
IS THE BEST SOFTWARE VALUE  
IN AMERICA.**

### ADDITIONAL SIMPLEX SOFTWARE PACKAGES

- REC-PAC: BIORHYTHMS & ANIMALS**— Regularly \$11.95, now only \$9.95
- ART-PAC: COMP-U-SKETCH, MICRO ORGAN & KALEIDOSCOPE**— Regularly \$11.95, now only \$9.95
- EDU-PAC: 4 MATH DRILLS & COMPUTER-AIDED INSTRUCTION**— Regularly \$11.95, now only \$9.95
- MATHSTAT-PAC: STATISTICS, LINEAR REGRESSION, VECTOR MATH & SIMULTANEOUS EQUATION SOLVER**— Regularly \$11.95, now only \$9.95
- FIN-PAC: CHECKBOOK BALANCER, NET PRESENT VALUES & AUTO LOAN ANALYSIS**— Regularly \$11.95, now only \$9.95
- COMBO: Computerized variation of popular BOGGLE hidden word game with 4x5 game board (2 to 8 players)** — Regularly \$11.95, now only \$9.95

### GUARANTEED

All programs are supplied on quality cassette tapes which are guaranteed to load and run (defective software will be replaced if returned within 30 days).

programming techniques to sophisticated graphics and sound capabilities. Includes many listings and game applications.

*The Timex/Sinclair 2000 and How to Get the Most from It.*

By Ian Sinclair. \$9.95.

Introduces the TS color computer, covers machine set up and operation, plus Basic programming.

*The ZX Spectrum: Your Personal Computer.*

By Ian McLean. \$12.95.

An introduction to the TS2000 and Spectrum, explaining the fundamentals of Basic programming.

## General Books

The computer section of any bookstore these days contains an overwhelming selection of material. We have gathered a few titles we have come across which might be of general interest.

### CompuSoft Publishing, Inc.

*The Basic Handbook: An Encyclopedia of the Basic Computer Language.* 2nd ed. By David A. Lien. \$19.95.

ISBN 0:932760-05-8

An encyclopedia of nearly 500 Basic words. Covers the dialects used by over 250 computers manufactured world-wide. Features special sections on Disk Basic, TRS-80 Extended Color Basic, Atari Basic, Tektronix Basic, and converting programs from one computer to another. Listed alphabetically with test programs, sample runs, variations in usage, and alternate spellings. 480 pp., 7 x 9. Paperback.

### Computer and Electronic Supply Services

*Computer Guide 1983.*

Ed. by S. I. Barrett and L. A. Sweeney. \$37.25.

Guide to over 250 small and personal computers from over 100 computer companies in 5 sections: application programs and system software; programming languages; machine characteristics; consumer information; stores and vendors. Comparison charts. New editions annually; quarterly updates. Over 1500 pp.

### Dell Publishing Co.

*The Official Computer Hater's Handbook.*

By D. J. Arneson. \$3.95.

Everything the computer hater needs to know about: how to destroy a computer; what to do with a dead computer; how to tell if your teenager is using computers; how to understand computer-speak; how to turn off computer conversations at cocktail parties; and more. 192 pp.

### Wayne Green Books

*Inside Your Computer.*

By I. R. Sinclair. \$12.97.

Explains microprocessor chips, hardware circuits, the interpreter, the use of machine language; hardware, software, computer components, the microprocessor, the accumulator, and operating systems. Sections on compilers, assemblers, monitors, binary numbers, analyzing a Basic line, and using Basic and machine code in combination.

### Para Publishing

*Word Processors & Processing.*

By Dan Poynter. \$11.95 pp.

Discusses what word processing is and how it can help the reader; the parts, functions, and features of the word processor; how to buy one and how much; sources of additional information; glossary of word processing terms. 172 pp.

TS 1000™/ZX81™ OWNERS:

CIRCLE 36 ON READER SERVICE CARD

**PC Clearinghouse, Inc.**  
*PC Clearinghouse Software Directory.*  
 \$29.95 plus \$2.50 s&h.

Comprehensive software buyer's guide listing over 21,000 software packages from over 2900 software publishers and 200 microcomputer manufacturers. Cross referenced to hardware, operating systems, application packages, programming languages, and prices. 840 pp.

**Prentice-Hall, Inc.**

*The Computer Cookbook: How to Create Small Computer Systems That Work for You.*

By William Bates. \$12.95 (paper); \$21.95 (cloth).

Comprehensive reference guide on putting together microcomputer systems from various component; explains the ingredients that must be integrated into finished systems; offers specific, factual, timely information including an industry listing.

**St. Martin's Press**

*The Complete Handbook of Personal Computer Communications: Everything You Need to Know to Go Online with the World.*

By Alfred Glossbrenner. \$14.95.

Shows how to send electronic letters, telexes; to buy modems and communications software; using the Source, CompuServe DJN/R; troubleshooting; electronic banking; online fact finding; shopping online; free computer bulletin boards; free software; encyclopedic data bases. 325 pp.

**Sybex, Inc.**

*Programming the Z80.* 3rd ed.

By Rodney Zaks. \$16.95.

ISBN 0-89588-069-5

Covers all aspects of programming the Z80 in assembly language. Includes systematic descriptions of Z80 hardware organization, complete instruction set, Z80 addressing modes, data structures. Application examples and exercises. 624 pp.

*Z80 Applications.*

By James W. Coffron. \$14.95.

Learn the necessary programming and interfacing techniques to connect the Z80 microprocessor to common microcomputer parts; basic and advanced I/O techniques; diagrams; examples. 288 pp.

**Yes! Bookshop**

*Computers: A Comprehensive Guide.*

By Chris Popenoe. \$2.00.

A comprehensive guide to computer books. 819 titles listed and classified: computer fundamentals; computer and society; microcomputers (by machine); languages (by type); assembly languages and microprocessors; operating systems. Authors index. 60 pp. 8 1/2 x 11.

 COLLEGE!**

WITHOUT TAKING MOPSY WITH YOU

MOPSY (Matrix Operations Programming System), is a computer program for college students, professionals and scientists, developed for use in personal computers. MOPSY performs Standard Matrix Operations: adds, subtracts, multiplies, transposes, inverts, calculates determinants, scalar multiplies and stacks matrices, in addition, of course to I/O and editing.

A non standard operation is also provided, for the solution of advanced statistics and tough non linear problems.

You get cassette with program recorded twice, User's Manual describing options and Application Manual describing solution of linear simultaneous equations, polynomial interpolations, best fit of curves with linear regression as a particular case, advanced statistics, numerical integration, electric circuit analysis, truss analysis, hydraulic network analysis, animal population and harvesting studies and more.

To order, specify computer (TIMEX-SINCLAIR 16K or COMMODORE 64), send \$25 Check or M.O. to

MOPSY

if you don't see what you need here, write us: DEPT. WHAT-I-WANT, and tell us what you need or want. We will do our best to deliver.

**1. SCREEN MACHINE . . . . . \$14.95**

- Place input prompts anywhere on screen where they belong • Complete error checking, formatting and verification • In MC for absolutely no screen flicker • Make your screen 100% neater and more professional • Commercial rights available • Full prompting shows maximum length of each input.

**2. MNEMOSYNE ASSEMBLER \$19.95  
 by Nathan Finstein**

- Two tapes with proven Source Editor, fast loader (650-baud) and full-featured assembler • 30-plus page manual • RAM size set automatically: 16 to 64K • List to screen and/or printer • Editor functions: add, move, change, delete, find string, find tag, scroll, block, move block • Fast loader (2.5 times faster than Sinclair) can be used in your own programs • Menu driven, rapid program development cycle.

**3. GRADE BOOK . . . . . \$14.95**

- Teachers: cut a 3-hour job down to size . . . 10 minutes! Keep track of up to 40 students, with up to 30 grades per student • Unlimited classes • Weight grades any way possible, using your own formulae • Uses Screen Machine for full screen data entry and editing.

**4. FINANCIAL ANALYZER . . . \$14.95**

- Save big \$\$\$ on prepaying mortgage principal • What will your IRA be worth in the year 2000? • What was the real yield on that investment? • Simplify all standard interest rate calculations • Three screens full of calculations to help you improve your financial position • Uses Screen Machine for full screen data entry and editing.

**5. STAT MASTER . . . . . \$19.95**

- Complete data entry, editing, storage, custom data files • Calculates these functions from your custom data: mean, standard deviation, min/max, correlations, co-variances, linear regressions, chi-square hypothesis tests, two-way cross tabulations, two-dimensional frequency distribution.

**6. INSURANCE RECORDS . . . \$14.95**

- Complete record-keeping of household, business belongings, i.e., jewelry, electronic equipment, credit cards, collectibles, everything • Use to help insurance agent recover after a fire or burglary • Uses Screen Machine for full screen, data entry and editing.

**7. VU-WRITE TEXT EDITOR . . \$14.95**

- Word processing simplified • Perfect tool to document spreadsheets and programs • Send letters, notes on cassettes • 11K available to add, insert, delete, move text • Up to 348 lines of 30 characters in 16K.

- All prices plus \$1 for postage
- All cassettes high-quality, guaranteed to load

**\$2 for any manual plus catalog;  
 payment credited to first order**

# The Bookshelf Goes Supernova *Eric Deeson*

Maybe old-stagers among the *SYNC* readership will recognize the allusion in my title. It refers to a piece of mine published here in the March/April 1982 issue. Called "The Exploding Bookshelf," the feature listed some 40 books on the ZX81 available in Britain at the end of the machine's first year of existence.

Now, a year and a half after that piece, I must tell you I have lost count of ZX81 titles. I would not be at all surprised if the length of the list has doubled by now—there is no doubt that the ZX81 is here to stay. Well, for a few years yet.

However, I am now to survey another shelf in the bookcase, that containing the books on ZX81's younger sibling, the Spectrum. It is now somewhat more than a year since that machine first appeared and, again, the number of books on it is of the order of forty. Before looking at these publications in any detail, I would like to make a few observations.

## Observations

1) The books are bulkier now. Many in the ZX81 list had below a hundred pages; hardly any of the Spectrum books are so small.

2) The books are more professional now. Sir Clive Sinclair has created more than a trio of micros, and around them have grown hundreds of companies, many of which are frighteningly well-off. Sinclair converted some tiny publishing houses into comparative giants and caused the actual creation of others whose sales go into hundreds of thousands. The new wave of books are glossy, illustrated with photos and clear listings, and properly proof-read. Yet the price-

---

**The Spectrum books are bulkier, more professional, glossy with photos and clear listings, and proofread, yet cost no more.**

---

range has hardly changed, being still £2.50 to £10 (\$4.00 to \$16.00).

3) Existing publishers have made little impact yet on this market. Their main problem is that they are used to years between commissioning and issuing. The new companies can get a manuscript into the bookshops in weeks. Maybe the big publishers will have to save face with a potentially successful drive into software.

## The List of Books

In this survey I shall follow the pattern of "The Exploding Bookshelf." First comes a list, in publisher order, of all the books I know of. My brief comments follow the book listing; if there are none, it is because I have not seen the book.

Two extra details appear in the list this time. First is the UK price, where known. This is given because I used up *SYNC*'s fee last time in replying to your queries about prices. Some books are available in North America, and you will have to research that.

However, you can order direct from Britain. I trust no publishers will complain if you send them payments worked out like this. To the quoted price add £1.50 for airmail postage, etc. (£2.00 if the book costs more than £5.50). Remit that amount as a sterling cheque; if you wish to pay in dollars add another £1 before converting because British banks charge outrageously for dealing in dollars!

In case of doubt about prices and ship-

ping costs, contact the publisher directly. Or you can contact a major distributor if you want several books. I recommend these two:

Software Bookshop, 30 Lincoln Road, Solihull, West Midlands, UK.

Mine of Information, 1 Francis Ave., St Albans, Hertfordshire, UK.

The second extra data item in the preliminary book listing is a code for type of book. I have identified five classes:

**B:** Beginner's introduction; attempts to put the (excellent) Manual into more suitable terms for novices.

**P:** Program collection; material which does not do more than give superficial notes on listings.

**I:** Intermediate coverage; more in depth work for those with some knowledge of Sinclair programming; may get into machine code somewhat.

**A:** Advanced work; for people who have mastered Spectrum Basic (which is not much different from TS1000 Basic).

**M:** Miscellaneous.

Following the broad shallow listing comes a list of half a dozen books with a paragraph or two discussion that I would recommend as being particularly good values. That is a personal recommendation, but, well, I *do* reckon to have made a deep study of Sinclair resources in practice. Even so, there may well be omissions, so I would best apologise now to any aggrieved publishers wondering why they have been left out.

# 7

# Good reasons why you should subscribe to *Creative Computing*.

## It's the Number One magazine of computer applications and software!

There's one place you can always be sure of learning more about microcomputer software and applications: *Creative Computing*.

Every month *Creative Computing* provides you with a continuing education on everything related to microcomputers and computer equipment. Useful articles, "how to" tutorials, exciting new applications, games and "no holds barred" reviews of the latest software and equipment make up a major part of *Creative Computing's* editorial content.

We give you probing features on programming breakthroughs and important news. Plus in-depth articles on elementary, intermediate and advanced software and applications topics—to help you develop your knowledge and skills, save hundreds (perhaps thousands) of dollars in unneeded software, discover uses for your personal computer that you might never have considered. Articles that increase your overall "computer consciousness." Here's how:

### 1

#### **Creative Computing gives you things to actually do with a computer.**

Just owning a computer isn't enough. You've got to know what to do with it. That's why applications are our primary focus. Text editing, animation, graphics, business simulations, data base and file systems, music synthesis, control of household devices, communications, games—some of the applications and software you'll learn about in *Creative Computing*.

### 2

#### **Creative Computing discusses business applications in simple, nontechnical language.**

If you're a business person who needs to know about the latest developments in word processing and office applications, turn to *Creative Computing*. We clarify such business applications as investment analysis, futures evaluations, data base management, mailing list programs, text editing, word processing and simulations. And all the software available for business people.

### 3

#### **Creative Computing helps you decide which computer equipment is best for you.**

Our tough, no-nonsense equipment profiles arm you with the facts before you walk into a computer store. You'll know the right questions to ask and how to cut through the jargon and sales hype. We give you authoritative guidance in deciding what you need, what you don't need—and what's right for you and your pocketbook.

### 4

#### **Creative Computing covers computer education in depth.**

We started out as a computer education publication, and we're still committed to the educational community. We regularly carry articles on designing educational software, evaluating educational software, teaching concepts and terminology in computer education, text editing applications for literature and computer simulations in the classroom—plus a great deal more.

### 5

#### **Creative Computing brings you hours of mind-expanding game entertainment.**

We've got a soft spot for the computer game addict—and computer game software. We know you want to understand more about the new computer games flooding the market: which ones are easiest to learn? Require the most skill? Offer the most surprises? Give you the best graphics? Provide the most challenge? Contain a new twist? *Creative Computing* brings you the answers.

### 6

#### **Creative Computing features the state of the art.**

Columns on the most popular personal computers, a "software legal forum," letters to the editor. Reviews of books, games, organizations, dealers and events. Fascinating interviews with leading innovators, equipment designers, program developers and game inventors—men and women who'll give you a real glimpse of the future!

### 7

#### **Our price is right.**

By subscribing to *Creative Computing* now, you can save as much as 33% off the full subscription price. To learn elsewhere what you'll learn from *Creative Computing*, you might spend hundreds of dollars in course fees and books. Then you'd have to winnow out what you could use from all that you'd learned. But *Creative Computing* does that for you, so you'll have time to enjoy your own computing interests. And that saving of time makes this offer very inexpensive indeed.

**SAVE UP TO 33%! —**

# Understanding Your Spectrum by Ian Logan is a treasure trove of hints and tips and useful routines and details a dozen Spectrum bugs.

## The Bird's Eye View

**Addison-Wesley**, 53 Bedford Square, London WC1.

**M:** *Logo Challenge*, Govier and Neave, 25 pp. £29.95 (incl. workbook and 2 cassettes). A superb package for home and school use on turtle graphics; good, but cramped, pupil work book; excellent teacher is guide; and two nicely packed cassettes. Important.

**Altwasser**, 22 Foxhollow, Bar Hill, Cambridge 3.

**P:** *Cambridge Colour Collection*, Altwasser, 64 pp. £6.95 (cassette available). The first book on the Spectrum. Fair enough: Altwasser designed the Spectrum. 20 good Basic programs with instructions but no notes.

**Armada**, Westerhill Road, Bishopbriggs, Glasgow 64.

**B:** *First Steps with Your Spectrum*, Hughes, 128 pp. (due July). Very well illustrated introduction for children.

**AVC**, PO Box 415, Birmingham 17.

**P:** *Learning with the Spectrum*, Deeson, 24 pp. £1.50 (cassette available). The second book (let) on the machine; 10 programs for school and home learning objectives; instructions and programming notes.

**Collins Educational**, 5 Buckingham Place, London SW1

**M:** *Spectrum Starter Pack 1*, McBride, 77 pp. £9.95 (including cassette). An integral cassette/workbook in fine style introducing Spectrum programming.

**M:** *Spectrum Starter Pack 2*, McBride, 112 pp. £9.95 (including cassette). Second half of the above.

**Duckworth**, 43 Gloucester Crescent, London NW1.

**I:** *Spectrum Graphics*, Hampshire, 192 pp. £6.95. A hasty non-technical collection of graphics programming tips and listings.

**P:** *Spectrum Programmes*, sic, (Hampshire).

**Gower**, Croft Road, Aldershot, Hampshire.

**B:** *Learning to Use the ZX Spectrum*, Bradbeer, 76 pp. £4.95. An amazingly superficial introduction from a usually brilliant writer, who indeed co-authored the Spectrum manual.

**Granada**, Frogmore, St Albans, Hertfordshire.

**B:** *The ZX Spectrum*, Sinclair (no relation), 130 pp. £5.95. Sometimes superb, sometimes too speedy; overall good.

**P:** *The Spectrum Book of Games*, James, £6.95.

**B:** *The Spectrum Programmer*, James, £6.95.

**Hewson**, 60a St Mary's St., Wallingford, Oxfordshire.

**P:** *20 Best Programs for the Spectrum*, Hewson, 118 pp. £5.95. A well-varied collection, generally of high standard, with often excellent notes. See below.

**A:** *40 Best Machine Code Routines for the Spectrum*, Hardman and Hewson, 144 pp. £5.95. Nicely laid out and fully explained; this is not a collection of routines but a good grounding text with good examples.

**Interface**, 44 Earls Court Road, London W8.

**B:** *Programming Your ZX Spectrum*, Hartnell and Jones, 231 pp. £6.95. Another of the first few before the flood; half written by Tim Hartnell, once the most prolific Sinclair writer (*Interface* was set up by him); a very thorough book.

**P:** *60 Games and Applications for the Spectrum*, Harwood, 90 pp. £4.95. All kinds of program here, generally short (which is good); supplied with instructions.

**Linsac**, 68 Barker Road, Middlesbrough, Cleveland.

**I:** *The Spectrum Games Companion*, Maunder, £5.95. Not seen, but, if it follows the pattern of Maunder's earlier serious ZX books, this will be good value.

**Macmillan**, Basingstoke, Hampshire.

**A:** *Advanced Graphics with the Spectrum*, Angell and Jones, 254 pp. £9.95 (cassette available). An absolutely marvellous book for really serious programmers. See below.

**Melbourne House**, Glebe Cottage, Station Road, Cheddington, Leighton Buzzard, Bedfordshire.

**P:** *Over the Spectrum*, various, 164 pp. £6.95 (cassettes available). 300 lengthy programs in good variety; detailed notes; plenty of illustrations.

**A:** *Understanding Your Spectrum*, Logan, 192 pp. £7.95. Tough going but super. See below.

**A:** *Spectrum Machine Language for the Absolute Beginner*, Tang, 245 pp. £6.95. Very thorough but rather dry.

**M:** *The Complete Spectrum ROM Disassembly*, Logan and O'Hara, 236 pp. £9.95. For the real specialist a true goldmine; a superb volume is this.

**M:** *Spectrum Hardware Manual*, Dickens, 108 pp. £5.95. How the thing actually works; some nice tweaking ideas; very thorough.

**Microscene**, Battenhall Road, Harborne, Birmingham.

**M:** *Guide to ZX Spectrum Resources*, Deeson, 92 pp. £2.00. Details of over 200 suppliers to this market and their products; illustrations; reviews. I think it is invaluable, but I would, wouldn't I?

**Phipps**, 99 East Street, Epsom, Surrey.

**I:** *The Spectrum Pocket-book*, Toms, 160 pp. £5.50 (cassette available). Useful programs, lots of tips, and nice introductions to topics like machine coding. See below.

**Prentice-Hall**, 66 Wood Lane End, Hemel, Hempstead, Hertfordshire.

**B:** *The ZX Spectrum—Your Personal Computer*, McLean et al., 220 pp. £5.95. Rather too slow-moving, or very careful—depends on your speed I guess!

**Shiva**, 4 Church Lane, Nantwich, Cheshire.

**B:** *Easy Programming for the Spectrum*, Stewart and Jones, 139 pp. £5.95 (cassette available). Far and away the best introduction to Spectrum programming. See below.

**P:** *Computer Puzzles for Spectrum*, Stewart and Jones, 60 pp., £2.50. A wide variety of old and new teasers; good instruction; very well illustrated.

**P:** *Games to Play on Your Spectrum*, Wren-Hilton, £1.95. A very pleasant little book; just right for the transition between purchased games and your own.

**I:** *Further Programming for the Spectrum*, Stewart and Jones, 162 pp., £5.95. Another brilliant book from Stewart and Jones which I would deal with in depth below except I already have two of their magic spell-binders in that section.

**I:** *Spectrum Machine Code*, Stewart and Jones, 103 pp., £5.95. Anyone else's treatment of this topic would be coded A. Say no more? Well, I do say more! See below.

**M:** *Spectrum in Education*, Deeson, 176 pp., £6.50. So far the only coverage of Spectrum usage in a specific applications area; this looks at many kinds of applications in classroom and home learning situations; 50 programs, too. If I were not so scared of the author I would put "see below" now, but I wouldn't dare do that.

**Sigma Technical**, 5 Alton Rd., Wilmslow, Cheshire.

**B:** *The Sinclair Spectrum in Focus*, Harrison, 190 pp., £6.25. A thorough and thoroughly nice introduction that verges on I category in range of content.

**Sinclair-Browne** (the Sinclair), 10 Archway Close, London N19.

**I:** *The ZX Spectrum Explored*, Hartnell, 218 pp., £5.95. A unique attempt at providing a serious overview of the Spec-

TIMEX and SINCLAIR FORGOT!

presents the

### SPYDER CHARACTER BOARD

- Play and create high resolution games
- Create your own character sets
- Includes 2K of memory
- Use easy to read reverse video
- Compatible with RAM Packs and ZX Printer
- Installs easily (complete instructions included)

Included with the Spyder Character Board:

- Full documentation to get the most from your ZX81
- Demo tape with character sets
- Zap-Em high resolution game
- Spyder Software Catalog

Bare Board -\$14.50  
 Kit -\$24.50

## STOP PLAYING GAMES

**NEW**  
Sinclair Timex 1000

- Calculate odds on HORSE RACES with ANY COMPUTER using BASIC.
- SCIENTIFICALLY DERIVED SYSTEM really works. TV Station WLKY of Louisville. Kentucky used this system to predict the odds of the 1980 Kentucky Derby. See the Wall Street Journal (June 6, 1980) article on Horse-Handicapping. This system was written and used by computer experts and is now being made available to home computer owners. This method is based on storing data from a large number of races on a high speed, large scale computer. 23 factors taken from the "Daily Racing Form" were then analyzed by the computer to see how they influenced race results. From these 23 factors, ten were found to be the most vital in determining winners. NUMERICAL PROBABILITIES of each of these 10 factors were then computed and this forms the basis of this REVOLUTIONARY NEW PROGRAM
- SIMPLE TO USE: Obtain "Daily Racing Form" the day before the races and answer the 10 questions about each horse. Run the program and your computer will print out the odds for all horses in each race. COMPUTER POWER gives you the advantage!
- YOU GET: 1) Cassette.  
2) Listing of BASIC program for use with any computer.  
3) Instructions on how to get the needed data from the "Daily Racing Form"  
4) Tips on using the odds generated by the program.  
5) Sample form to simplify entering data for each race.

### START USING YOUR COMPUTER FOR FUN and PROFIT!

#### PROGRAMMERS TOOLKIT and GRAPHICS ROUTINES CARTRIDGE

\$29.95

A 16K to 64K compatible cartridge that plugs into the back of the ZX/TS. It provides 8 programming aids such as: RENUMBER, DELETE, REMGEN, etc. and 15 graphics aids that will ROLL or SCROLL the screen in any direction, DRAW or UNDRAW a predefined figure anywhere on the screen, BACKGROUND, and more. Allows use of all 24 lines of the screen. EPROM on cartridge uses the 12K to 16K block of memory so that none of the BASIC programming area is used. (add \$2 P&H)

#### PROGRAMMERS TOOLKIT and GRAPHICS ROUTINES on cassette

\$9.95

Same as cartridge version except requires RAM in 12K-16K area.

#### DRY GULCH on cassette (16K)

\$9.95

An interactive adventure where the user types in short English phrases such as: Go North, Take the Hammer, Saw the Iron Bars etc. to explore an old west ghost town in search of treasure. Written in BASIC and SAVEable in progress. Estimated time to solve is 10-12 hours. Try this adventure first.

#### MORLOC CASTLE on cassette (16K)

\$14.95

Similar in style to DRY GULCH, MORLOC CASTLE is, however written in machine language to provide much faster response. Provides over 200 words of vocabulary, is SAVEable in progress and uses every last byte of RAM. VERY DIFFICULT (hint sheet available) estimated time to solve 30-50 hours.

#### EPROM CARTRIDGE KIT

\$17.95

A complete kit (less EPROM) to build a plug in cartridge that will accept one 2716, 2732, or 2764 EPROM. Board may be memory mapped in 4K or 8K increments in 8K-16K area of memory (16K-32K if RAMpack is not used). (Add \$2 P&H)

#### EPROM PROGRAMMER KIT\*

\$39.95

A complete kit to build a programmer for 2716, 2732, 2732A and 2764 EPROMS. Includes: PC board, all parts (except 28v or more power supply), cassette, and instructions. (Add \$2 P&H)

#### EPROM PROGRAMMER ASSEMBLED\*

\$49.95

As above except assembled and tested. (Add \$3 P&H)

#### I/O PORTS AND EPROM PROGRAMMER PLANS

\$5.00

Schematic documentation and software listing to build a 24 line I/O port then use it to program 2716, 2732, 2732A or 2764 EPROMS. Bare PC board available for \$17.95.

\*NOTE: compatible only with 'feedthrough' type RAMpacks like MEMOTECH, BYTE BACK etc. NOT compatible with TIMEX or SINCLAIR RAMpacks unless modified.

# The best introduction for beginners to computing is *Easy programming for the ZX Spectrum*.

trum and its uses; a mishmash of programming material, games, and text (illustrated with more listings, on business and education. A mishmash, true, but actually a well-knitted and readable one.

**Sunshine Books**, 19 Whitcomb St., London WC2.

**I:** The Working Spectrum, Lawrence, 216 pp., £5.95. Subtitled "A library of practical subroutines and programs"; this is not. It does contain lots of modules, some quite useful, broken carefully out of 19 lengthy programs (in many fields), but you cannot trace them.

**Timedata**, 16 Hemmells Laindon, Basildon, Essex.

**I:** *Exploring Spectrum Basic*, Lord). Lots and lots of great little listings with many new tips and effects; useful appendices, too.

## The Worm's Eye View

Now I will turn to a more detailed consideration of the books I view as the best half dozen! Of course, those by that Deeson chappie are really the best but I shan't mention them again! Can't afford accusations, after all.

It seems sensible to begin at the novice end and narrow in to the more specialised staff.

I have absolutely no doubt that the best introduction for beginners to computing is *Easy Programming for the ZX Spectrum* by Ian Stewart and Robin Jones (Shiva). Ian is a world-renowned expert in catastrophe theory, an abstruse branch of math, but I am sure his bank manager is more delighted at his ability to turn out brilliantly readable programming books with Robin.

This one, accessible to youngsters and enjoyable by adults, is written in a gloriously user-friendly style with lots of good illustrations (even cartoons, another product of the Stewart brain) and gently developed program listings.

The book covers Basic thoroughly despite its fairly short length and uncramped style, going from square one to graphics, sound and PEEK/POKE. It is no bind to work through at any speed, and, when you reach the end, you will know a lot about programming (concepts as well as techniques) and have some super programs on tape.

As I said above, Tim Hartnell, author with Dilwyn Jones of *Programming your ZX Spectrum* (Interface), was right up front in the early Sinclair years. He started magazines and a great user group and wrote and wrote and wrote. He is pretty well retired now. This book does not show any of the haste of his original works and attempts to be definitive and comprehensible as well as "all things to all men" (and women). There are millions of program listings, but they do not overshadow the text, which remains fairly thorough and well-graded.

Once one has gone through an introduction to Spectrum Basic it is natural to turn to collections of rather more ambitious—and lengthy—listings. Thus one can learn more and build up a reasonable software library. The dangers with collections are two-fold: (a) inadequate proof-reading, and (b) inadequate commentary.

Andrew Hewson's *20 Best Programs* (Hewson Consultants) suffers from neither fault. Andrew, too, has been well-respected in the British Sinclair field for a long time, and that respect arises from his detailed knowledge and thoughtfulness. Both attributes are apparent in this book, surely the best of the P bunch for people wanting to learn rather than transfer material mindlessly from paper to screen. The 20 programs are fairly lengthy, perhaps 2-3 sides on average, but they range particularly widely in usage and are extremely well backed up in the text. We miss the way Andrew's earlier books gave lots of little tips, too, but perhaps we will be lucky enough to get a whole book of those sometime. Mike Lord's *Exploring Spectrum Basic* (Timedata) was a strong contender for this spot because it does contain tips, but it lost out in being comparatively disjointed.

Trevor Toms is yet another name you might know. His books have always been beautifully presented (even if a bit pedantic, and *The Spectrum Pocket-book* (Phipps Associates) is no exception. It does contain lots of hints (including the invaluable PAUSE 4E4 from ZX81 days that the Spectrum replaces with PAUSE 0!). However, Trevor's book mainly consists of programs, all fully annotated and material on programming philosophy. He goes a fair way into machine coding, too, but for the best introduction to that we must return to Ian Stewart and Robin Jones for their *Spectrum Machine Code* (Shiva). This is identical in style, approach, and outstanding value to their *Easy Programming*. It is not a heavy text on binary/hex/Z80 this and that; nor is it

CIRCLE 63 ON READER SERVICE CARD

a dreary collection of ill-connected routines. It is a guide in the real sense of the word, in which the authors take you charmingly by the hand and lead you through machine code thickets in such a way that you do not notice that they are thickets at all. Even 10-year olds can compete in the arcade stakes with this book!

Among the advanced specialist works, we come first to *Understanding Your Spectrum* by Ian Logan. Ian seems to have dedicated his life to messing around, Tron-style, inside Sinclair chips. Subtitled "Basic and machine coding programming," this particular book is more accessible than some of the others. It is a treasure trove of hints and tips and useful routines and details a dozen Spectrum bugs, some of which of course have now been spilted.

The Basic material is a minority in Logan's book; he provides a summary of the keywords and their uses, briefly but always with novel points for consideration. The bulk of the volume is not deep machine code, but a bright and definitive look at ROM routines you can use in Basic programs and such like. The pages still look rather formidable at first sight, but closer examination will trap you into a great deal of midnight oil.

*Advanced Graphics with the Spectrum*

by Ian Angell and Brian Jones (Macmillan) (yet another Ian; yet another Jones) is a quite marvellous book, after the publication of which no one can ever again say that the Spectrum is a toy! To

be able to work through it you need good Basic, thorough math (Grade 12, say), and much patience. That is because this field is not a toy one, and the authors do not leave much out even if they write always in a user-friendly way.

The book is well illustrated, as it needs to be in view of its content, and most adequately proof-read. The program material consists of many sub-routines (well-defined modules, which link together to produce the various systems required). In this way the authors take us from character graphics to orthographic projection with hidden line removal. The only area they do not touch is machine-code graphics, but that would be too much to ask for.

The ZX81 is alive and well in its homeland and the number of books on it grows steadily. All the same, after well over a year of the excitement of the Spectrum (an incredibly popular machine), publishing on that is where the action is. My main list is not complete, remember—there has probably been a book a week on the Spectrum since early last summer.

Bookshelf explosions are a real possibility—I now have more computer books on the floor than on the wall rather than risk having the wall come down! Far over a hundred Sinclair-based books do not help at all.

## SOUND EFFECTS ★ MUSIC & TWO JOYSTICK - I/O PORTS

The ARCADE MASTER . . . . A & T \$64.95  
Plug-in Module for ZX81 and TS1000

Now you can create complex arcade quality sound effects, write melodies in 3 part harmony, & control the action with one or two Atari compatible joysticks (not included).

- 3 tone generators - 8 octave range
- 3 channel mixer, amplitude controller, and envelope generator
- Noise generator
- Internal speaker, volume control, and audio output jack
- Requires no additional power supply
- Complete instruction manual and examples
- Can be used with printer, 16K rampak, and most other modules
- 2 Independent, TTL compatible I/O ports can be used as general purpose input/output, or with joysticks

SPEECH MODULE . . . . . The PARROT (by R.I.S.T.) \$89.95

Generates 64 Allophones (Speech - Sounds) which you combine to create any words, phrases, sentences, or sound effects you wish.

- Complete instructions & examples
- Speaker jack (drives 4 or 8 ohm speaker)
- Compact, reliable, thoroughly tested and safe

PARROT . . . . . COMPLETE SPEECH MODULE KIT \$59.95

KEYBOARD . . . . . \$79.95

- FULL TRAVEL • Has all Timex - Sinclair characters printed on multi-colored keys. Same switch used by Atari, H.P., T.I. and others.
- AMERICAN MADE •

2 AMP POWER SUPPLY . . . . . SPS-2A POWER SUPPLY \$22.95  
ZX80/81 • TIMEX 1000

As you expand your system, you'll need more power to run it. This supply has it!

MULTIPLE OUTLET STRIP . . . . . TA-4 TRANSIENT ABSORBER \$29.95

with built in 2 STAGE TRANSIENT ABSORBER  
PROTECTS YOUR COMPUTER SYSTEM FROM DANGEROUS VOLTAGE SPIKES  
Absorbs transients & surges such as those produced by lightning, switching surges and noise spikes. 4 protected A.C. outlets, 15 A.C.B., power switch & pilot light. 6 ft. cord.

MULTIPLE OUTLET STRIP . . . . . \$19.95

**SINWARE** provides these quality machine code programs for the ZX81/TS1000:

## STEP

STEP provides line-at-a-time execution of your BASIC programs and shows you the display and variable values to pinpoint programming errors. Set line breakpoints, loop breakpoints, or conditional breaks for fast testing of long routines. STEP occupies 3K at the top of your 16K RAM as you write and test new programs. Detailed documentation. The final solution for BASIC bugs.

## Z-TOOLS

Z-TOOLS lets you merge programs from tape, renumber lines (including GOTOs and GOSUBs) for neat listings, copy and delete program blocks for quick restructuring, or verify tape contents against memory to eliminate program losses. Supplied in two versions, for the top of a 16K RAM pack or for the 8-10K block of expanded RAM.

## HOT Z

HOT Z disassembles, debugs, and lets you copy and edit machine code programs. If you can move a cursor around and understand hex numbers, you can use HOT Z almost at once. Provides beautiful assembly listings, addressable cassette functions, runs your ZX printer (or Memotech I/F), even disassembles the ZX floating-point language. You owe your ZX/TX a fresh dose of HOT Z.

## Z EXTRA

Z EXTRA is a display manager and data filer that lets you enter text, data or pictures directly to the screen and save them in groups in memory, on tape or in print. Display them sequentially or in scrolls through one another or use them in your BASIC programs. Give your computer a completely new personality with Z EXTRA.

<b>PRICES</b>	Add \$2.00 for postage

## Book Review

# Learning Timex Sinclair Basic

Sharon Zardetto Aker

*Learning Timex Sinclair Basic* by David A. Lien. CompuSoft Publishing. \$14.95.

If you have ever thrown down your TS1000 User Manual in despair—or disgust, help has finally arrived: David Lien's *Learning Timex Sinclair Basic*. It is a clear, thorough guide to programming the Timex Sinclair 1000, but ZX81 and ZX80 users are not ignored. No matter how "learner friendly" the manual for the new TS1500 will be, it could not be friendlier than this.

Lien takes the reader from plugging in the computer and doing a first PRINT command to writing search and sort routines and using PEEK and POKE. A sample program illustrates every new concept, and many of them are revised in the light of new materials presented—a very effective explanatory method.

Computer novices are always assured that a strong math background is not necessary for programming. Regardless of its necessity, a thorough grasp of mathematical principles is certainly desirable. Lien has given the best no-frills explanations of logarithms, exponents, and the trigonometric functions that I have seen. If you learn about arrays from this book, you will wonder why the array is considered so difficult by some.

The string functions are covered over several chapters; various concepts are introduced so slyly—I mean, slowly—that the reader can easily follow the development of an alphabetical sorting routine.

The chapters on video display graphics develop a simple shoot 'em-down arcade game that will give you a basic understanding and a new respect for the programming that goes into the real thing.

All the fundamentals of Sinclair Basic are covered in what the author notes is a "light and non-threatening" style—so

light, in fact, that he occasionally gets carried away, leaving one wishing for something more substantive, e.g., regarding the screech on the tape: "You expected maybe Lawrence Welk?" or, regarding the rate/time/distance formula: "If it's been a few years, you might want to sit on the end of a log and contemplate that for a while." The misplaced cuteness is easily forgiven, considering the contents of the text and its otherwise excellent presentation.

The author notes that this book is based on the best of his earlier writings. This accounts for its quality and also its most serious flaw—serious in terms of the magnitude of the error, not in terms of the overall presentation. The chapter on "Debugging Programs" has not been thoroughly revised to suit the ZX/TS computers. He lists some common errors to check for if your program is not running correctly. Included here are a half-dozen mistakes that the ZX/TS syntax checker never lets you enter to begin with, and it will even show you where the error is when you attempt to enter the line, e.g., forgotten end quotation marks in a PRINT statement, using an out-of-range line number.

There are exercises sprinkled liberally throughout the book, with sample answers given at the end. Information is presented in small doses, in logical sequence, and in a light manner. You may find yourself wishing for a little more information in a particular area, such as how to PLOT a circle, other PEEK and POKE routines, or more moving graphics methods.

However, it was not Lien's intention to teach everything about some things, but something about everything, and he manages to do just that. It is hard to imagine anyone working through this book page by page and not acquiring a thorough understanding of ZX/TS programming techniques. It seems an ideal how-to book for teenagers as well as adults. ■

Sharon Zardetto Aker, 20 Courtland Dr., Sussex, NJ 07461.

# Mastering Machine Code on Your ZX81

Bruce T. Garrick

*Mastering Machine Code on Your ZX81* by Toni Baker. Reston Publishing Company. 180 pp. paperback; \$12.95.

Though written for the ZX81, *Mastering Machine Code on Your ZX81* applies equally well to the Timex Sinclair 1000. Each chapter also includes addressing and programming procedures for the ZX80. The light conversational style is both entertaining and understandable.

The topics covered include: machine code loader programs, hexadecimal numbers, assembler mnemonics and commands. PEEKing and POKEing, MC storage, the stack, pushing, popping, negative hexadecimal numbers, subroutines in MC programs, the ROM and its many useful routines, music, the display file, some MC games, ROM dis-

assembly, and the use of the ROM arithmetic subroutines.

Many annotated machine code routines illustrate the book. Since the Basic equivalents of the assembler commands are given, you can relate what you are learning to what you already know. Each chapter from four on concludes with exercises which are very important. If you do not do them, you will miss out on a great deal. However, the very first exercise could have been easier. Chapter 9 is worth the price of the book and more. It has a machine code program that allows you to List, Write, Insert, Delete, and Save your MC programs.

The appendices are excellent and include: the old and new ROM system variables with their addresses in hexadecimal and decimal, conversion tables for assembler to hex and hex to assembler, the ZX character set, and another

complete listing of the machine code editing program.

If you may find the use of hexadecimal throughout the book inconvenient or cumbersome to use, you can use a converter program to shift to decimal when you do your own programming.

*Mastering Machine Code on Your ZX81* is an understandable and entertaining guide that can take you, as it did me, from total ignorance of machine code to a fair comprehension, provided you are interested in learning machine code and willing to invest the time. It took about a month of my spare time to work my way through the book although that month was not entirely frustration free. While I am not quite a master of machine code, I can now write machine code to suit my purposes. And, though my programs may lack the elegance of greater experience, they really work. ■

Bruce T. Garrick, 6235 S. Yorktown Pl., Tulsa, OK 74136.

## MICROSYSTEMS SPECIALISTS, INC.

Announces  
The Latest Breakthrough  
in ZX81/TS1000 Software

**μSS™-Backup \$14.95**

- Make backup cassettes of your favorite programs!
- Requires only one tape recorder!
- Makes multiple copies!
- Simple to use!

**μSS™-Pilot \$29.95**

- Excellent introductory language for children and beginners!
- Easy to use—no prior computer experience necessary!
- Pilot features one character commands!
- Includes line editor, tutorial and sample programs!

**Sinclair ZX81  
Timex Sinclair 1000 Statistics**

**Lawrence A. Kelly**

*Sinclair ZX81/Timex Sinclair 1000 Statistics: Twelve 16K Programs Including Multifactor Analysis of Variance* by A. H. Wolach and M. A. McHale. K.D.V.-H.E. Publishers. \$11.00. 6 program tapes, \$15; individual program on tape, \$1.50.

In the highly variable world in which we live, we use statistics to help us decide whether the small sample of the universe we look at is really representative of the entire universe. In most cases we want to know whether this sample is representative of a process which is better or worse than the rest of the universe.

Some people, highly critical of statistics, say that you can prove anything you want with statistics. Unfortunately, with the misuse of statistics this can be true. People who can be fooled by statistical abuses often confuse mathematical proof with statistical inference. Mathematical proof does not exist outside the theoretical world of mathematics. In the real world we must use more devious reasoning powers. In using statistics we must always be aware of how that reasoning works. Statistics "sneaks in the back door."

For example, we can never prove that one mouse trap is better than the other by statistics, but we can prove, with 95 percent or so assuredness, that the two mouse traps cannot be equivalent. The default of this circuitous logic is that the trap that catches more mice must be better since we are sure that the differences between mice caught by each trap

could be observed by chance alone less than 5 percent of the time. Technically, these mental gymnastics are called rejection of the "null hypothesis."

The reason for this background argument is that the software package from Wolach and McHale really works.

Many software packages from houses like Microsoft, Sorcim, Ashton-Tate contain long caveats that they do not guarantee the performances of their software in any specific applications, etc. Perhaps Wolach and McHale should have included a similar warning since people seem to abuse the application of statistics more than any other discipline. The programs can be misused if one does not use the proper test in the proper circumstances.

Although the book has 12 programs, it has really only two main types of tests, namely, the t-test and the analysis of variance.

Clearly the t-test, which tests the distribution about the means (averages) of two groups to see if they are different by chance alone, is designed to compare two groups, e.g., to see if Brand A mouse trap catches more mice than Brand B under the same test conditions. In the first t-test in the book, one can test 5 Brand A vs. 10 brand B, and have a valid test. In the second test, the measurements must be equal in number, i.e., paired observations.

The analysis of variance is to be used in such cases where Brand A is compared to brands B, C, D for the number of mice they can catch. This is a one-way problem; two and three way analysis allows for varying such factors as the kind of

Lawrence A. Kelly, 28 Countrywood Dr., Morris Plains, NJ 07950.

# Statistics looks at a small sample of the universe to help us decide whether the sample is representative and better or worse than the rest of the universe.

mouse caught or whether using bread in the trap is better than cheese.

I entered three or four of the listings in the book. The convention of underlining the "tokens" is quite helpful. The tapes all LOADED the first time (3/4 volume) with no problem. Each of the 12 programs worked perfectly as described in the helpful examples.

For comparison to Wolach and McHale I chose a report from "Some Statistical Methods Useful in Circulation Research"

by Sylvan Wallenstein, Christine L. Zucker, and Joseph L. Fleiss in *Circulation Research*, an official journal of the American Heart Association. The editors had requested the authors, all biostatisticians, to study the statistical methods applied in the journal over the years 1970-80 and to comment on the appropriate or inappropriate use of statistics. They found that the t-test and analysis of variance were the most widely used tests and that the t-test was the only test used in most

studies reported in the journal to the almost total exclusion of the analysis of variance which in most cases was the more appropriate test. Wolach and McHale must realize this since they present only two approaches to the t-test and 10 to the analysis of variance.

Table 1 describes the results of the data published compared to the results from Wolach and McHale's program. The test was a randomized block design done by program BMDP2V (Dixon and Brown, *Biomedical Computing Programs*, P series, Berkeley: Univ. of California Press, 1977) on an IBM 370 in batch mode through IBM VSPC and by #7RBKE (Wolach and McHale) on a kit-built ZX81 in an interactive mode in real time.

The book provides many fine references to experimental design and the proper application of each of the tests in the package. Students of statistics, or anyone wishing to know more on the subject, will find an excellent course of study using the references listed by Wolach and McHale, their trusty TS1000, and the tapes available with the book. ■

## Book Review

# The ZX81 Companion *Paul Grosjean*

*The ZX81 Companion*, by Robert Maunder, Creative Computing Press, 131 pp., \$9.95.

*The ZX81 Companion*, like other ZX81 books, is totally applicable to the TS1000. It begins with a chapter on graphics techniques. First the screen field is explained. Then PLOT and UNPLOT are used to develop the basic components in graphics: drawing straight lines, using triangles, circles, parabolas, and ellipses, and moving a point around the screen. After the PRINT AT instruction is discussed, it is combined with INKEY\$ to create real-time programs.

For users who want to develop their own data processing and retrieval systems, Chapter 2 may be worth the price of the book alone. String handling and design of programs to handle data are

taken up first and then a program for file processing is developed using a modular approach.

Chapter 3 introduces educational uses with about 10 illustrative programs and games (including six 16K programs) for spelling and math, including the use of grids.

Chapter 4 is intended for the more experienced programmer who is ready to delve into the secrets of the 8K ROM and machine code and put them to work for him. The heart of this chapter is the two page list of the starting points for most of the useful ROM routines and the 11 page ROM disassembly (hex addresses, codes, and mnemonics). This does not cover the entire ROM, only the parts most easily usable by the programmer. The listing is small, but readable.

Each chapter is well illustrated with drawings, diagrams, and program listings.

These programs include the program outlines, variable lists, and comments. Exercises allow the reader to try out the points being developed, and answers are given for self checking. The book is typeset, including the over 60 program listings. Although this makes the listings much easier to read, they do not follow the screen format of the computer. The brief index includes program names as well as topics.

The Appendix is a particularly valuable section because it deals with the design and development of a program as a whole by dividing the task up into a series of steps and taking the reader through the process.

This is a book for users who are ready to move beyond the manual to expand their use of graphics, to tackle bigger programs, and to use the ROM more effectively. ■

Cassette Software for the ZX81  
and the Timex/Sinclair 1000

TEXTII-Text processing system

Features:

- \* No word splitting at end of lines
- \* Pages separator and new line control characters
- \* Adjustable no. of characters per line for 32, 80 col, etc. printers
- \* Utilizes machine code to speed up routines
- \* String search routine to find words, phrases
- \* Renumber routine to allow paragraph insertion
- \* Inverse video screen function
- \* Instructions to use the string search, line renumber and inverse video as utilities for other programs
- \* Lower case-if your printer prints lower case for graphics characters
- \* Block delete function
- \* Left and right half printout to allow two halves of 64 column text to be printed with a 32 column printer.
- \* Stores approximately 9000 characters of text per save.
- \* Includes PRODIR a programmed directory

## Book Review

# Byteing Deeper into Your Timex Sinclair 1000

Sharon Zardetto Aker

*Byteing Deeper into Your Timex Sinclair 1000* by Mark Harrison. John Wiley & Sons. 160 pp. Softbound. \$12.95.

*Byteing Deeper into Your Timex Sinclair 1000* is a catchy title, but do not take it too literally since the book was originally written for the ZX81 and retitled. Nevertheless, the content applies completely to the TS1000. More importantly though, it does not just "byte" deeper than the User's Manual, it covers many of the basics in a more easily digestible manner.

If you have already had some TS1000 experience, you might want to skip over the first few chapters. While they are not unworthy of study, the real meat begins with chapter 5.

The first program (p. 35) is a simple three-liner that fills the screen with whatever is input. It will hook you on Sinclair graphics possibilities, and, if you like what Harrison can do with INPUT, PRINT, and GOTO, just wait until you see what he does with INKEYS.

All the commands and functions are introduced, explained, and used in the 37 illustrative programs. Games run the gamut from "Dice" and "Baccarat" to "Destination Saturn" and "Black Holes." The programs for alphabetizing and line renumbering will get a lot of use, and you will want to become familiar with "Word Processor" before you buy that printer you have been promising yourself.

Although the explanation of plotting

circles and ellipses assumes the reader has a knowledge of trigonometry, the uninitiated can use the formula programs.

The chapter on PEEKing and POKEing shows how to use the memory locations in the ROM and the RAM. When you write your own game programs, you will return repeatedly to the sample uses of PEEK and POKE. While the introduction to machine code will not make you a machine code programmer, it will help you understand and use more confidently the many machine code programs available for ZX/TS computers.

The brief, but thorough, section on the logical functions might well be the highlight of the book. Understanding the true/false testing capability of the Sinclair will lead to more elegant programming, and knowing how to replace lines of IF/THENS with a concise AND/OR will save memory.

The last section on "Projects" (hints, not answers, are provided) is uncomfortably like a final exam. If, however, you can handle the projects, you will know that you know your stuff. Harrison knows his stuff, and he explains it well.

If you were totally lost half way through your Manual, this book is not the best to turn to. Although its explanations are clear and concise, it moves quickly and does not give you second chances. However, if you are in need of some clarification or if you might benefit from a different approach, this is a book to buy. At first glance, *Byteing Deeper* seems a slim volume for its price tag, but the wealth of information packed into it justifies the expense. ■

Sharon Zardetto Aker, 20 Courtland Dr., Sussex, NJ 07461.

# The Logical Operators *Sharon Zardetto Aker*

AND and OR have two distinct usages in Sinclair Basic. One mirrors their use in English and is easily understood; the second is less straightforward, but is an extremely versatile programming technique. NOT, the third logical operator, is unfortunately overlooked or ignored by many beginner programmers; it, too, can be a powerful programming tool.

## AND and OR

```
IF A<10 AND B<10 THEN...
IF A<10 OR B<10 THEN...
```

In the first example, the command following THEN is executed if *both* conditions are true (the conditions being  $A < 10$  and  $B < 10$ ). In the second example, as long as *either* condition is true, the command will be executed.

AND has a higher priority than OR and is performed first regardless of its position in the conditional statement.

```
IF X>5 OR Y>5 AND Z>5 THEN...
```

This statement sets up two conditions:

- 1)  $X > 5$
- 2)  $Y > 5$  AND  $Z > 5$

Since they are linked by OR, either one being true will cause the command to be executed.

To circumvent the computer's automatic ordering of operations, parentheses should be used.

```
IF (X>5 OR Y>5) AND Z>5 THEN...
```

The two conditions in this statement are:

- 1)  $X > 5$  OR  $Y > 5$
- 2)  $Z > 5$

Since they are linked by AND, both conditions must be true for command execution.

You should note that, in this last

## You must understand the computer's view of "truth": a true condition is "1"; a false condition is "0".

example, there are actually two combinations that will satisfy the computer's truth-check:

- 1)  $X > 5$  AND  $Z > 5$
- 2)  $Y > 5$  AND  $Z > 5$

## Instead of IF-THEN

AND and OR also have another, entirely different, usage in Sinclair Basic, one that allows you to combine several IF-THEN statements into one logical statement that does not even use IF-THEN.

```
IF A<10 THEN GOTO 125
IF A=10 THEN GOTO 300
IF A>10 THEN GOTO 480
```

can be rewritten:

```
GOTO (125 AND A<10)+
(300 AND A=10)+
(480 AND A>10)
```

To translate this into understandable English, read each AND as "if." The computer looks at each one of the parenthetical statements and checks the truth of the expression following AND. If that conditional statement is true, the value of the parenthetical statement is set at whatever precedes AND; if the ex-

pression is false, the statement is assigned a 0.

So in this last example, if A is 14, the line will work out as in Figure 1. The computer will GOTO 480.

## Mutual Exclusivity

The parenthetical statements in the above example are mutually exclusive; that is, if one is true, the others have to be false. That is not always the case, and you should plan carefully in a situation like the following:

```
IF N<10 THEN GOTO 100
IF N=10 THEN GOTO 150
IF N<20 THEN GOTO 200
```

Obviously, N can be less than 10 and less than 20 at the same time; so can it be both equal to 10 and less than 20. As long as the IF-THEN statements are in the right order in your program ("right" depends on the effect you want), there is no problem because the computer will act upon the first true statement it encounters and never see the one(s) following.

However, if you rewrite these statements using the logical operators, you

Figure 1.

GOTO	(125 AND A<10)	+	(300 AND A=10)	+	(480 AND A>10)
	false		false		true
GOTO	(0)	+	(0)	+	(480)

Figure 2.

GOTO	(100 AND N<10)	+	(150 AND N=10)	+	(200 AND N<20)
	false		true		true
GOTO	(0)	+	(150)	+	(200)

Sharon Zardetto Aker, 20 Courtland Dr., Sussex, NJ 07461

would have a *big* problem. If N is 10, the computer would make the evaluation found in Figure 2 and execute GOTO 350.

Further definition of one or more of the conditions, until the parenthetical statements *are* mutually exclusive, is necessary. For instance:

```
IF N<10...
IF N=10...
IF N<20 AND N>10...
Written logically,
GOTO (100 AND N<10)+
(150 AND N=10)+
(200 AND (N<20 AND N>10))
```

In the last parenthetical statement, the first AND operates as "if." The second AND operates in its usual manner requiring that both conditions be true for the total expression to be true. The inner parentheses are not strictly necessary, since the first AND will always be used as the "if"; they were included here only to make the example clearer.

#### Other Commands

Since the entire logical expression boils down to a number, it can be used in place of a number with many different commands:

```
PRINT AT (5 AND Z>14)+
(2 AND Z<5), 10; 'OKAY'
PLOT X, (17 AND B=12)+
(27 AND B<>12)
GOSUB (500 AND L=10)+
(800 AND M=10)
PRINT (0 AND N<>10)+
(N AND N=10)
PAUSE (120 AND T<10)+
(380 AND T>=10)
```

#### Strings

Strings can also be used with logical statements. If the conditional expression

is true, the parenthetical expression is "equal to" the string before AND. If the conditional expression is false, the statement is considered to be an empty string. So:

```
IF A>B THEN PRINT 'TOO HIGH'
IF A<B THEN PRINT 'TOO LOW'
can be rewritten as:
PRINT ('TOO HIGH' AND A>B)+
('TOO LOW' AND A<B)
```

When A is larger than B, the statements will be evaluated:

```
PRINT ('TOO HIGH')+('')
```

You can also assign a string value with this syntax:

```
LET P$=('TOO HIGH'
AND A>B)+
('TOO LOW' AND A<B)
```

A logical expression for strings or numbers does not have to consist of alternative choices; a parenthetical logical expression can be inserted into an otherwise straightforward command. Consider a program that would display a multiplication problem of two randomly generated numbers (A and B) and a player's answer (C). If the answer is wrong, you might want it marked with an asterisk.

```
PRINT A; ' * ' ; B;
TAB 10; ( ' * '
AND C<>A*B); TAB 11; C
```

If the answer is correct, nothing will be printed at TAB 10.

#### Variable Re-valuation

Logical expressions that change the value of a variable are easy to use. Here is one example, and the ways it would be evaluated.

```
LET X=X+(5 AND B<A)+(7 AND B>A)
If B<A X+ (5) + (0) =(X+5)
If B>A X+ (0) + (7) =(X+7)
If B=A X+ (0) + (0) =(X)
```

As you can see, there is no need to write a statement for the B=A possibility if you want X to remain the same in that situation.

If the variable is to be decremented, change the plus sign to a minus sign:

```
LET N=N+(5 AND P=0)-
(5 AND P<>0)
```

This will be evaluated in one of two ways:

```
If P=0: N+(5)-(0) = N+5
If P<>0: N+(0)-(5) = N-5
```

#### Using OR

While AND is used for strings and numbers, and variable re-valuation involving addition and subtraction, OR is only practical for re-valuations involving multiplication or division. A study of the chart in Figure 3 might help you understand why this is so.

When OR is used in this construction, read it as "unless":

```
LET N=N*(10 OR A>B)
```

If B is less than A, the statement is true. It is evaluated as 1 (as noted in the chart), and reads:

```
LET N=N*(1)
```

and the value of N does not change.

If B is *not* less than A, the parenthetical statement is assigned the value of the number before OR:

```
LET N=N*(10)
```

So, N is multiplied by 10 *unless* B is less than A, in which case N remains the same.

If you were writing a program to calculate new prices for merchandise going on sale, where items less than \$100 were to be reduced by 10% and all others by 20%, your statement would read (P is the current price):

```
LET P=P*(.8 OR P<100)*
(.9 OR P=100)
```

## HOW YOU CAN GET FREE 16-K SOFTWARE ...

COMPUTER-WEAR  
SOFTWARE  
—ABSOLUTELY FREE!

Need a good game to play or program? Circle Chess board with instructions \$5.00. Send your recorded Circle Chess games and programs for publication in Circle Chess Journal, Box 63, Des Plaines, IL 60017.

The evaluations are:

If  $P < 100$ :  $P * (1) (.9) = P * .9$   
If  $P \geq 100$ :  $P * (.8) (1) = P * .8$

### Non-exclusive Statements

You may not always want parenthetical statements in a variable re-valuation to be mutually exclusive.

Consider a game where a player receives 10 points for hitting at least ten targets, and a bonus of 20 points for hitting exactly ten targets.

```
LET SCORE=SCORE+
(10 AND H>9)+
(20 AND H=10)
```

When H is ten, both expressions are true and SCORE is incremented by 30 points.

ORs do not have to be mutually exclusive, either. Consider the change in a game score caused by the following:

```
LET S=S*(10 OR H<5)*
(10 OR H<10)*
(10 OR H<15)
```

If H is less than five, all three statements are true, evaluated as 1, and S (the score) does not change at all. As the value of H gets higher, the score will be multiplied by 10, 100, or 1000, depending on how many of the parenthetical statements are true:

```
If H is 7:
S=S*(10)*(1)*(1) =S*10
If H is 12:
S=S*(10)*(10)*(1) =S*100
If H is 19:
S=S*(10)*(10)*(10) =S*1000
```

### NOT

To make use of NOT, you must first understand the computer's view of "truth." Conditions in an IF-THEN statement are evaluated, and a true condition is assigned a one, while false one are assigned zero. (Note the "result" column in Figure 3.)

Furthermore, any mathematical expression whose result is zero is considered false, while a non-zero result (even a negative number) is true.

NOT changes the true/false value of an expression:

If A is false, NOT A is true.  
If A is true, NOT A is false.

### Applications

If you would like a command executed every second time it is encountered in a loop, use NOT to change the true/false value of a variable back and forth. With:

```
IF V THEN ...
at the beginning of a loop, and:
```

```
LET V=NOT V
later in the loop, V will be true on every other loop.
```

By using  
 $LET E=N/2-INT(N/2)$   
E is zero whenever N is an even number. To have a command executed only when N is even, use

```
IF NOT E THEN ...
Similarly,
LET I=N-INT N
means that I is zero whenever N is an integer, and
IF NOT I ...
will be a true condition when N is a whole number.
```

### Priority

NOT is assumed to apply only to the number to its right, unlike the other logical operators, which automatically apply to an entire expression.

NOT B<C  
is interpreted as:  
(NOT B)>C

NOT has priority over both AND and OR, so the following conditional statement would be processed in the order of innermost brackets first:

```
IF [[ [NOT A] AND B] OR C]
The use of NOT can, of course, be altered by the use of parentheses.
```

### A Demonstration Program

"Dots" is a sketcher program that illustrates the use of the logical expressions to change the value of a variable.

You will be drawing with colons in this program, which gives an interesting effect, since a double row of dots is printed when you move horizontally, and a single row if you move vertically. You can also move diagonally, and if you go off the edge of the screen, the line will continue from the opposite edge.

Figure 3.

Operator	Conditional Choice	Conditional Expression	Result
AND	A\$	true	A\$
AND	A\$	false	" "
			(empty string)
AND	N	true	N
AND	N	false	0
OR	N	true	1
OR	N	false	N

The keys surrounding F on the keyboard control the movement: T is for straight up, V for diagonally down to the left, and so on. Pressing G will stop the program.

#### Line Notes

20,30: Set initial value of L (line number) and C (column number) so colon is printed in screen center.

80,90: Change line and column numbers according to which key has been pressed. The AND in the parenthetical statements operate as "if." The ORs operate in the basic manner.

100,110: Reset the line and column numbers if the new values result in a

```

5 REM "DOTS"
10 REM BY ZARDETTO AKER
20 LET L=11
30 LET C=16
40 PRINT AT L,C:""
50 IF INKEY$="" THEN GOTO 50
60 LET M$=INKEY$
70 IF M$="G" THEN STOP
80 LET L=L+(1 AND M$="B" OR M$
="N" OR M$="V")-(1 AND M$="R" OR
M$="T" OR M$="Y")
90 LET C=C+(1 AND M$="Y" OR M$
="H" OR M$="N")-(1 AND M$="R" OR
M$="F" OR M$="U")
100 LET L=L+(22 AND L=-1)-(22 A
ND L=0)
110 LET C=C+(32 AND C=-1)-(32 A
ND C=0)
120 GOTO 40

```

number that would not be on the screen. If L is -1, adding 22 to it makes it 21, and places the print position at the opposite edge of the screen; if L is 22, subtracting 22 puts the print position at zero.

You should note that the diagonally drawn lines result from L and C changing on the same loop.

"Believe me - You're making a big mistake."

# IT'S SO EASY

## To expand your computer when you have the Solutions

Solutions is proud to announce the arrival of **THE EXPERIMENTER'S SOLUTIONS BOOK**. It will show you how simple it is to add sophistication to your Timex Sinclair 1000. Here are some examples:

- A Buffered Expansion board that allows for a great number of quick and strong connections.
- Different types of Parallel I/O.
- The use of Parallel I/O to control AC and DC circuits.
- RS232 Serial Communications.
- Parallel Printer Interface.
- Real Time Clock

And more!

Written in a clear, easy to follow style everything is included; wiring diagrams, software listings, parts lists, theory of operation, etc. There is also an introduction to help you understand the Timex Sinclair Expansion port.

**THE EXPERIMENTER'S SOLUTIONS BOOK**

**\$9.99**

Don't forget Solutions also carries an ever expanding line of business and educational Software.

# Memory Scrunching on the TS1000 and ZX81

James Grosjean

One of the most serious problems that TS1000 users are faced with (and ZX81 users even more so) is the lack of memory (RAM). Most commercial programs require a 16K RAM pack, and many printed in newsletters and magazines require over 2K (or 1K for ZX81 people). Although the package or listing calls for 16K, this does not mean that the program is 16K long. It just means that you must have more RAM than your machine comes with and 16K is the next increment.

If you do not intend to expand your system RAM, the only solution is to shorten programs which might fit then into your RAM.

This article collects over thirty tips to save memory. Some of them have appeared in *SYNC*; hopefully some of them are new to you. Some are simple, obvious hints, while others require some clever programming. When dealing with 2K (or less) every byte counts!

You can calculate the bytes in the various lines as follows: Line numbers take up two bytes no matter whether the number is 1 or 9999. Between the line number and the text of the line in the computer's memory are two bytes telling the computer how long that line is from the first byte of the text of the line up to and including the end of line marker (CHR\$ 118). In the line itself all letters, keywords, etc., typed by a single key-stroke take up one byte except numbers. Numbers take up six bytes plus the number of digits and one byte for the decimal point if any. After the text of the line is an end of line marker telling the computer where the line ends. This marker takes one byte.

James Grosjean, 50 Kings Rd., Chatham, NJ 07928.

## A program may require the 16K RAM pack, but that does not mean it uses 16K RAM.

### Memory Scrunching Tips

#### 1) REM statements

Eliminate REM statements and include them in your documentation.

#### 2) Game elements

Eliminate one or more game elements. This might make the game fit into 2K.

#### 3) Restart mechanisms

Omit restart mechanisms completely. E.g., "Do you want to play again? Y or N."

#### 4) STOP statements

If the last program line is a STOP statement, delete it. The program will stop anyway only with a different error code.

#### 5) Keywords and tokens

Use keyword and token expressions. When entering a line such as:

```
10 REM TO RUN USE GOTO 100
```

use the keywords for the words TO, RUN, and GOTO. This line is entered by typing exactly: 10, E (REM), SHIFT 4 (TO), SHIFT 3 (THEN), R (RUN), SHIFT 5 (BACKSPACE), SHIFT 0 (DELETE THEN), SHIFT 8, U, S, E, SHIFT 3 (THEN), G (GOTO), SHIFT 5 (BACKSPACE), SHIFT 0 (DELETE THEN), SHIFT 8, 1, 0, 0, ENTER. Do this several times to get used to it. If necessary, reword prompts to allow for this technique.

#### 6) PRINT statements

Shorten or eliminate PRINT statements, and include the information in

your documentation in a notebook for programs. For example, replace A with B.

```
A: 10 PRINT "DATE OF BIRTH?"
B: 10 PRINT "BIRTHDATE?" or
"BOBORN?"
```

#### 7) Commas

When lining up PRINT lines, use commas or hyphens instead of spaces. For example, replace A with B or C.

```
A:
10 PRINT "DO YOU WISH TO FIGHT
THE CENTIPEDE OR FLEE?"
```

```
B:
10 PRINT "DO YOU WISH TO FIGHT
THE", "CENTIPEDE OR FLEE?"
```

```
C:
10 PRINT "DO YOU WISH TO FIGHT
THE CENTI- PEDE OR FLEE?"
```

#### 8) PRINT AT's

Combine PRINT AT's into one line. For example, replace

```
10 PRINT AT 2,14;"HI"
20 PRINT AT 5,12;"THERE,"
30 PRINT AT 8,12;"SALLY"
```

with

```
10 PRINT AT 2,14;"HI";AT 5,12;
"THERE,";AT 8,12;"SALLY"
```

#### 9) Combine lines

Rearrange programs to allow for a combination of lines. This can change the results of the program so be careful. For example, replace

```
50 IF Y=9 THEN STOP
60 INPUT I$
70 IF I$="YES" THEN STOP
80 GOTO 20
```

with  
 50 INPUT I\$  
 60 IF Y=9 OR I\$="YES" THEN  
 STOP  
 70 GOTO 20  
 Remember to change GOTOs and  
 GOSUBs to their new line numbers.

**10) Parentheses**

Eliminate unnecessary parentheses. For  
 example, replace A with B.  
 A: 10 LET I=(A\*10)+(B\*5)  
 B: 10 LET I=A\*10+B\*5  
 Because of the order of operations (refer  
 to manual) this will be evaluated  
 properly.

**11) Conditional statements**

In certain cases a condition can be  
 changed without changing the effect. For  
 example, replace A with B.  
 A: 10 IF Y=10 THEN PRINT "YOU  
 KILLED IT."  
 B: 10 IF Y>9 THEN PRINT "YOU  
 KILLED IT."  
 This saves one byte because 9 has only  
 one digit. However, if floating point num-  
 bers are utilized in the program, this tech-  
 nique may not work.

**12) Variable names**

Do not use words for variables. Replace  
 A with B.

A: 10 LET STRENGTH=10  
 B: 10 LET S=10  
 Include variable descriptions in your doc-  
 umentation.

**13) IF...THEN STOP**

If a line contains a conditional jump to  
 a STOP statement, replace it with an  
 IF...THEN STOP statement. For example,  
 replace  
 100 IF Y < 10 THEN GOTO 400  
 .  
 400 STOP  
 with  
 100 IF Y < 10 THEN STOP

**14) Arrays**

Do not set up an array with more ele-  
 ments than needed. If 54 elements are  
 required, use DIM A(54), not DIM A(60).

**15) 0 in arrays**

Eliminate statements which initially set  
 array elements to 0. For example,  
 10 DIM A(4)  
 20 LET A(1)=0  
 30 LET A(2)=1  
 40 LET A(3)=0  
 50 LET A(4)=9  
 Delete lines 20 and 40. After execution of  
 line 10 all elements are set to 0 auto-  
 matically.

**16) CLEAR**

Try to use the CLEAR command if  
 possible. CLEAR can sometimes save a  
 program just before it runs out of mem-  
 ory. CLEAR is one of the least used  
 commands in Basic.

**17) GOTO/CLEAR**

In very rare cases RUN can replace a  
 GOTO/CLEAR combination. For  
 example:  
 65 CLEAR  
 70 LET A=7

**175 GOTO 65**

Delete line 65 and change 175 to 175  
 RUN 70. Because RUN clears all vari-  
 ables, it can replace a CLEAR and a  
 GOTO.

**18) One time variables**

If a variable is only used once do not  
 assign the variable. For example, replace  
 10 LET D=INT (RND\*10)+1  
 20 FOR I=1 TO D  
 30 PRINT "■"; (inverse space)  
 40 NEXT I  
 with  
 10 FOR I=1 TO INT (RND\*10)+1  
 20 PRINT "■"; (inverse space)  
 30 NEXT I  
 This allows you to delete a line (with a

slight lengthening of another) and not assign an unneeded variable.

**19) Reuse variables**

Reuse variables. Once a variable has been assigned it remains in memory, even if it is not used again in the program (unless RUN, CLEAR, or NEW is used). Look at this program:

```
10 FOR X=1 TO 10
20 PRINT " ";
   (10 inverse spaces)
30 NEXT X
40 LET D=INT (RND*10)+1
50 PRINT "YOUR STRENGTH IS ";D
```

The variable X will take up memory until RUN, CLEAR, or NEW. Even though no longer used, it occupies precious bytes of RAM. A better program would be:

```
10 FOR X=1 TO 10
20 PRINT " ";
   (10 inverse spaces)
30 NEXT X
40 LET X=INT (RND*10)+1
50 PRINT "YOUR STRENGTH IS ";X
```

Now, instead of both X and D stored in memory, only X is in memory.

**20) Reuse variables without reassignment**

In certain cases a variable can be reused without being reassigned. For example:

```
10 FOR X=1 TO 10
20 PRINT " ";
   (10 inverse spaces)
30 NEXT X
40 LET X=11
50 PRINT "YOU NOW HAVE ";X;" GOLD PIECES."
```

Line 40 can be deleted. After completing the loop X is already equal to 11. However, not many variables are initially set to 11; ten is more likely. Thus:

**21) FOR-NEXT variable range**

Replace the previous example with:

```
10 FOR X=0 TO 9
20 PRINT " ";
   (10 inverse spaces)
30 NEXT X
40 PRINT "YOU NOW HAVE ";X;" GOLD PIECES."
```

After the loop X equals 10, which is easier to work with than 11. This also saves memory. The number of bytes needed to store an integer equals the number of digits plus six. In line 10, the use of 0 and 9 saves one byte in place of 1 and 10, because 10 has two digits and 9 has one. Compare:

**Tip 21:**

0 = 1 + 6 = 7 bytes  
 9 = 1 + 6 = 7 bytes

for a total of 14.

**Tip 20:**

1 = 1 + 6 = 7 bytes  
 10 = 2 + 6 = 8 bytes

for a total of 15.

**22) Number substitutes**

Because numbers require a minimum of seven bytes of memory, too many numbers quickly fill up the RAM. Therefore, replace line A with line B below.

A: 10 LET E=0

B: 10 LET E=NOT PI

0 requires 7 bytes; NOT PI uses 2 bytes. Some other expressions for 0 are USR PI, SIN PI, and TAN PI, each requiring two bytes.

A: 10 LET E=1

B: 10 LET E=SGN PI

1 requires 7 bytes; SGN PI uses 2 bytes

A: 10 LET E=3

B: 10 LET E=INT PI

3 requires 7 bytes; INT PI uses 2 bytes. Some other expressions and their equivalents are:

- COS PI = -1
- PEEK PI = 255
- PEEK NOT PI = 211
- PEEK SGN PI = 253
- PEEK PEEK PI = 135
- LEN STR\$ PI = 9
- CODE STR\$ PI = 31

This list is by no means complete.

For any other numbers use VAL (see tips 23 and 24 for exceptions) as shown in B below to replace A.

A: 10 LET E=2

B: 10 LET E=VAL "2"

A: 10 LET E=327

B: 10 LET E=VAL "327"

In each case the use of VAL saves three bytes. Note:

2 = 7 bytes  
 VAL "2" = 4 bytes

I have yet to find a better expression to replace VAL "2".

327 = 9 bytes  
 VAL "327" = 6 bytes

This tip is used not just in assigning variables. One of the above methods can be used to substitute for a number anywhere a number is used.

However, do not put VAL around each number in an expression:

10 LET E=(INT (RND\*VAL "10")+VAL "5")\*VAL "100"

Instead put VAL around the entire expression:

10 LET E=VAL "(INT (RND\*10)+5)\*100"

This way you get the most out of VAL.

Remember, though, that extensive use of VAL, NOT PI, etc., can slow down a program tremendously, but that is the sacrifice for memory saving.

**23) VAL exception**

An exception to the use of VAL is sometimes encountered:

```
10 FOR X=NOT PI TO VAL "20"
```

VAL "20" uses five bytes. If this line is replaced with:

```
10 FOR X=NOT PI TO EXP INT PI
two bytes may be saved. EXP INT PI
uses only three bytes. Although EXP INT
PI = 20.085537, this is rounded to 20
when used in combination with FOR. This
means that in the revised program in tip
18, the INT in line 10 may be deleted.
EXP PI could substitute for the number
23 using the same method.
```

#### 24) Variable instead of VAL

Another exception is when a single number is used many times. Assign a variable to it instead of using VAL. For example, replace

```
20 IF I > 10 THEN GOTO 80
22 INPUT I$
24 IF I$="FIGHT" THEN GOTO 80
26 IF A > 80 THEN GOTO 6400
28 LET U=B+80
30 IF U/T > 80 THEN GOTO 251
```

with

```
10 LET Y=80
20 IF I > 10 THEN GOTO Y
22 INPUT I$
24 IF I$="FIGHT" THEN GOTO Y
26 IF A > Y THEN GOTO Y*Y
28 LET U=B+Y
30 IF U/T > Y THEN GOTO Y*PI
```

#### 25) Strings in PRINTs

Similarly, if the same set of characters must be PRINTed several times, assign a string variable to those characters and PRINT that string. Keep in mind that it takes up memory to assign the variable as well as to keep the variable in the variable storage of the computer. So use this method only when the string must be PRINTed enough times to make it worthwhile.

#### 26) Destination changes

Change GOTO (or GOSUB) destinations. For example:

```
10 GOTO 100
.
.
.
100 PRINT "YOU FACE A
DRAGON"
```

Line 10 can be changed to 10 GOTO 99 and take advantage of a characteristic of the TS1000, namely, that, if the GOTO or GOSUB destination line does not exist, the computer skips over it and goes to the next line. Thus in the example above, the computer, finding no line 99, will go on to 100. This saves one byte since 99 has two digits, not three.

#### 27) Calculated destinations

The following is often seen in a program:

```
100 IF I=1 THEN GOTO 1000
110 IF I=2 THEN GOTO 2000
120 IF I=3 THEN GOTO 3000
130 IF I=4 THEN GOTO 4000
```

This can be replaced with a calculated GO TO. For example:

```
100 GOTO I*1000
```

If your program is not numbered to allow a calculated GOTO, renumber it, or:

#### 28) Logical destinations

Use a bit of logic. For example, the following lines:

```
10 IF I=1 THEN GOTO 100
20 IF I=2 THEN GOTO 219
30 IF I=3 THEN GOTO 235
40 IF I=4 THEN GOTO 900
```

can be replaced by:

```
10 GOTO (I=1)*100+(I=2)*219+(I=3)*235+(I=4)*900
```

Of course, we could use VAL around that expression.

```
10 GOTO VAL "(I=1)*100+(I=2)*219+(I=3)*235+(I=4)*900"
```

#### 29) Logical combinations

Use logic to combine statements. For a detailed discussion of the logical oper-

For the TS1000/ZX81

## LODAB

Merge two or more BASIC programs. Store a BASIC program for later recall. Renumber your entire BASIC program or renumber a block of lines. Keep track of your memory requirements with a memory chart of the BASIC program area. LODAB will occupy 1450 bytes.

16K RAM

IF BOTH PROGRAMS ARE LOADED, YOU ACCESS ONE MENU FROM THE OTHER WITH A SINGLE KEY.

## BDLS

At the touch of a key, your BASIC program listing will scroll up the screen. Blocks of lines may be deleted or copied. This is an ideal method for editing your BASIC programs. BDLS is relocatable, and will occupy 3/4K.

LODAB \$1800  
BDLS \$1800  
BOTH for \$2900

AND NOW THERE IS AN ULTIMATE GAME!

## CARVER

For IMMEDIATE delivery, send a personal check or money order to:

## NO MORE BAD CASSETTE LOADS with THE Z-DUBBER

The frustration of trying to load a cassette program into your Sinclair ZX80/81 or Timex 1000, is this what you really bought your computer for? **Why put up with it? Now you don't have to.** The Z-Dubber is a small device which connects between your computer and cassette player, improving your loading ease 100%.

The Z-Dubber also allows you to connect two tape recorders together, to create perfect duplicates of your favorite cassette programs. The Z-Dubber can be yours for \$31.95 postage paid within the U.S. area. Money back guarantee if not satisfied. Visa & Mastercard welcome.

ators and techniques see Sharon Aker's article in this issue.

### 30) Replacements

Replace A with B:

```
A: 10 IF Y=0 THEN...
B: 10 IF NOT Y THEN...
A: 10 IF Y <> 0 THEN...
B: 10 IF Y THEN...
```

### 31) Shortened restarts

This is a very impressive tip. Many games have a restart mechanism. For example:

```
810 PRINT "ANOTHER GAME?
(Y/N)"
820 INPUT A$
830 IF A$="Y" THEN RUN
```

This can be shortened, but a few simple adjustments are needed:

```
Change 820 to 820 INPUT A
Change 830 to 830 RUN
```

and make sure one of the program's variables is Y and none are N. Then, if "Y" is entered in response to the prompt in line 810, the computer will accept that as a legitimate response (because of the expression evaluator) and continue to line 830, where the program will be RUN. If "N" is entered, the computer will stop with an error code 2/820. This is what your final program would look like:

```
10 LET Y=10
```

```
810 PRINT "ANOTHER GAME?
(Y/N)"
820 INPUT A
830 RUN
```

Do not add a line in assigning the variable Y. Change one of the other variables in the program to Y. It is presumed that line

10 above had previously used a different variable such as 10 LET A=10.

### 32) False saving

There is one technique which some programmers use in an attempt to save memory, but it actually wastes memory instead. Lines such as these:

```
10 PRINT "YOU HAVE NO
STRENGTH"
20 PRINT
```

```
are replaced with
10 PRINT "YOU HAVE NO
STRENGTH",,
```

and then line 20 is deleted. This appears to save 4 bytes. Actually it wastes memory. The PRINT statement puts an end of line marker into the display file. Therefore a blank line on the screen takes up one byte when created by a PRINT used by itself as in line 20. When a comma is used, the computer fills the display file with spaces until the proper print position is attained. So it is better to have a slightly longer program than a much larger display file.

When all these tips are used, a program can often be reduced by as much as 50 percent. Note that in many of the above examples the revised program lines can be shortened even more by using some of the other tips in this article, but that would make the examples confusing.

### Speed Tips

Along with the problem of memory, TS1000 and ZX81 users often complain about speed. Here are a few tips to increase the speed of a program:

#### 1) Unnecessary calculations

Eliminate unnecessary calculations. VAL, NOT PI, and other memory savers

slow down the program. Replace A with B.

```
A: 10 LET U=Y*20/4*X
B: 10 LET U=Y*5*X
```

#### 2) Unnecessary lines

Delete unnecessary lines, e.g., REMs.

#### 3) Eliminate GOTOs

Rearrange the program to eliminate as many GOTOs as possible.

#### 4) Subroutines up front

Subroutines used often should be located as near the beginning of the program as possible. When the computer comes across a GOTO or GOSUB, it searches for its destination line from the beginning of the program.

#### 5) Redundant GOTOs

In situations like this:

```
30 GOTO 180
```

```
180 GOTO 90
Change 30 to 30 GOTO 90.
```

#### 6) Arrangement of variables

Assign the variables that are used the most first. When the computer comes across a variable, it searches through its variable area from the beginning to the end. Variables are stored in the order that they are assigned.

As a general rule, speed is often given up for memory saving and vice versa, unless machine language is used. Machine language is FAST and short.

This collection of memory saving tips is by no means complete. If you can add to the collection, send your tip to SYNC. Be sure to give examples.

## THE ANALOG INTERFACE FOR TIMEX Sinclair

VOTEM is a complete package of hardware and software to enable your computer to measure, display and record voltage and temperature. Use your computer to monitor any physical phenomenon (pressure, light, temperature, etc.) that can be represented by a DC voltage. A probe is provided for temperature measurements. Use VOTEM as a "smart" voltmeter/thermometer with storage.

VOTEM also amplifies and cleans up the tape signal to help you overcome LOADING problems experienced by many TS1000 owners.

\* Connects to tape input of TS-1000/ZX81/80

\* Requires no modifications to computer

\* Easily adapted to other computer systems

\* Operate with 1K or more memory

—Resolution: >14-bit: 0.00005V: 0.02° F: 50ppm

—Input Range: 0 to +1 Volts (easily expanded)

the REM statements to store important telephone numbers, dates, appointments, birthdays, etc. They could also hold inventories, screen coordinates for plot-

ting, machine code, or words like "CAT" and "DOG" for a computer version of "Hangman."

Listing 7 is an example of a computer

telephone directory that runs in 1K. The other ideas mentioned above I will leave as exercises for interested programmers. Feel free to substitute other phone numbers in line 10. This same program can be used to store other kinds of data where one item is directly related to another. An English to Spanish translator would be an example.

Listing 8 will graph any function you give it. First, you must input the function in terms of X. For example, if you wanted to graph  $f(X) = 4X^2 + 3X + 2$  then you would input  $4*X*X+3*X+2$ . Then you have to input the lower and upper limits on X. If you were plotting a sine curve, for example, you would probably want to use limits of zero and two pi. The nice thing about this program is that the vertical limits are calculated automatically. This makes function plotting quite a bit easier.

Stored on REM statements are some functions you can select instead of your own. Each function is followed by its

lower and upper limit. If you only have 1K RAM then you will not be able to use this feature. If this is the case, then enter the program without the USR routines in memory and omit lines 10, 20, 25, 35, 45, 80, 230, 300, and every line above 300.

You cannot plot more than one function on the screen at the same time, but

none of the prompt messages will appear after the first graph. Prompt messages also do not appear on the 1K version described above.

I hope that these routines and programs are of use to you. If you have other ideas on how to extend the capabilities of this little computer in this way, drop a line to SYNC.

# RPNZL

The RPNZL™ Programming System gives you the key to transcend the barriers of speed and control!

- 15-20 times faster than Sinclair BASIC
- Save data, screen and program files with Verify and Directory at 3000 bps
- Programmable keys • Full printer support
- Easy, structured, FORTH-like syntax compiles to compact pseudocode modules
- Complete System includes Language tape with resident Monitor, Editor/Compiler, Linker, and full documentation
- Run applications below or create more

RPNZL System TS1000(16K)/1500 \$29.95  
RPNZL Applications (require system above)

- CHARTMAK (Pie, bar, line) 9.95
- TURTLART (like LOGO) 9.95
- SCHEDULE (appointments & reminders) 7.95
- MOUNTAIN RAIDER (fast & furious) 5.95

10 YEARS 75% NFL WINNERS

**THIS ONE WORKS.** Our computers were fed every piece of NFL Statistical and Pointsread data from 1973 thru 1977. The results of that statistical analysis provided us with various sets of conditions that produced 75% winners against the spread. Ironclad test came when we applied those same conditions for the next 5 years, 1978 thru 1982. This time our win percentage against the spread was 75.9%. We call this our SPECIAL SITUATION SELECTIONS PROGRAM. 2nd program predicts game score - pointsread - best selections - individual game analysis - for entire league. Two program set comes with 83 SKED already loaded. You update score and pointsread. Program does the rest. ZX81/TS1000 64K required. Cassette or Listings \$35. PP.

## Quick-draw! Harry Doakes

More than two years ago, Sinclair announced that the 4K ROM of the ZX80 would be expanded to an 8K ROM and that one of the new commands would be DRAW. DRAW was just what it sounded like—a command to draw a line on the TV screen.

But DRAW never came to be. Even an 8K ROM has only so much room, and DRAW would not quite fit. There is a routine to do the same thing in the ZX81 and TS1000 manuals—but it is in Basic, and it is *slow*.

If you have been following this series of articles on programming in machine code, you have already learned how to translate many Basic commands into machine code. This time, we will look at two new instructions, and then see how they can be used in the machine code translation of that line-drawing routine. We will also look at numbers in base 16—the mysterious “hex” numbers—and see why they are handy for machine code programming.

### Negative Thinking

You already know that each regular register in the Z80 microprocessor, like each byte of memory, can hold any number between 0 and 255. Sometimes, though, we want to keep track of a *negative* number—a number that is less than zero.

Fortunately, there is an easy way to do it. Suppose register A contains the number 255—the highest number it can hold. Now suppose the next instruction in the Z80 program is

```
INC A
```

In Basic, this would be

```
LET A=A+1
```

---

## Most machine code listings are in hex; hex numbers save space each has exactly two digits.

---

What is the number in register A now? It is zero. When a register goes “over the top,” it starts all over again at the bottom. It is as if the register automatically subtracts 256 if a number is too high. In other words, when you are using a regular register,  $255 + 1 = 0$

As you might guess, subtraction works the same way. Once a register hits bottom, it starts over again at the top. In this case, it is as if the register automatically *adds* 256. Thus,  $0 - 1 = 255$ . But that does not help much—or does it?

It turns out that you really *can* use 255 instead of -1. Surprising as it sounds, all the arithmetic works. Consider this example:

$$14 + (-1) = 13$$

Can we really replace -1 with 255? Here is how it works:

$$14 + 255 = 269$$

Since 269 is higher than 255, the register automatically subtracts 256:

$$14 + 255 = 269 - 256 = 13$$

The arithmetic does work—and that can be a big advantage, as long as we keep track of whether the value in a byte or register is a regular number (between 0 and 255) or a negative number.

### More Negative Thinking

Now that we have negative numbers, we can use an instruction that makes a number negative. The instruction

```
NEG
```

will take whatever value is in register A and make it negative. The equivalent in

Basic might be

```
LET A=-A
```

That probably seems pretty straightforward—but there is a catch. Remember, we have to keep track of which numbers may be negative. For example, if the value in register A is 1, NEG will change it to -1, or 255. But, if the number in A is 255, NEG will not make it -255. NEG assumes 255 really means -1, so it changes the value to 1.

If this sounds complicated, here is a simple rule: When you are using negative numbers, figure that only the values from 0 to 127 are positive. The other values are negative numbers—from -1 down to -128. That way, you are not likely to lose track of what is negative and what is not.

### Great Divide

The Z80 processor can add and subtract pretty well, but it has a tougher time multiplying and dividing. It *can* do one kind of division, though: it can divide by 2. (Maybe that does not seem so great—but it is better than nothing at all.)

The instructions that divide by 2 are called “shift” instructions. Here is why: suppose you divide 142 by 10. The answer is 14.2—which looks a lot like 142. The difference is that the answer has been shifted over one decimal place. The Z80 shift instructions do the same sort of thing, but using base 2 instead of base 10. Dividing by 2 shifts a number over one “binary” place.

Fortunately, we do not have to worry

much about what a "binary" place might be. When you divide by 2, the answer is the same in binary or in decimal.

There are two different divide-by-2 instructions—one for numbers you know are positive (0 to 255) and one for numbers that might be negative (-128 to 127).

The first is the "shift to the right logically" instruction, abbreviated SRL. For this instruction, the Z80 assumes that the value in the register is a positive number and divides it by 2. For example, suppose register B contains 15. After the instruction

SRL B

register B will have the value 7—which is the next whole number less than 15/2.

For numbers that might be negative, you can use the "shift to the right arithmetically" instruction. If B is -15, then after

SRA B

This will equal -8, which is the next whole number less than -15/2.

Notice that it is always the next number lower, not closer to zero. It is exactly the same as the INT function in 8K Basic, though not the same as integer arithmetic in 4K Basic.

Why is one kind of shift called "logically" and the other "arithmetically"? It is jargon, that is all—and it is only mentioned here because those initials are used in the abbreviations SRL and SRA.

You can use these "divide-by-2" instructions with any of the regular registers: A, B, C, D, E, H, or L. You can also use register pair HL as a pointer, with the instructions

SRL (HL)

and

SRA (HL)

### Doubling Up

If you can "shift to the right" to divide, can you "shift to the left" to multiply? Certainly. If register D equals 45, then after

SLA D

D will equal 90. The SLA instruction works with all the regular registers, and with positive or negative numbers. But remember, you may get something you do not expect if the result is outside the right range.

### Drawing the Line

Now let's look at the routine that draws a line. Listing 1 is a slightly modified version of a program in the "Graphics" chapter of the ZX81 or TS1000 manual.

It is designed to work as a subroutine in Basic. To draw a line from one point on the screen to another, you use LET statements to make XSTART and YSTART equal the starting coordinates of the line, and XEND and YEND the ending coordinates; then you simply

Listing 1.

```

1000 LET U=XEND-XSTART
1010 LET M=ABS(U)
1020 LET X1=SGN(U)
1030 LET X2=X1
1040 LET V=YEND-YSTART
1050 LET N=ABS(V)
1060 LET Y1=SGN(V)
1070 LET Y2=Y1
1080 IF M>N THEN GOTO 1140
1090 LET U=N
1100 LET N=M
1110 LET M=U
1120 LET X2=0
1130 GOTO 1150
1140 LET Y2=0
1150 LET S=INT(M/2)
1160 FOR I=0 TO M
1170 PRINT AT YSTART,XSTART;CHR#
(128);
1180 LET S=S+N
1190 LET X0=X2
1200 LET Y0=Y2
1210 IF S<M THEN GOTO 1250
1220 LET S=S-M
1230 LET X0=X1
1240 LET Y0=Y1
1250 LET XSTART=XSTART+X0
1260 LET YSTART=YSTART+Y0
1270 NEXT I
1280 LET XSTART=XEND
1290 LET YSTART=YEND
1300 RETURN

```

GOSUB 1000. When it is finished drawing, the old ending coordinates become the

new starting coordinates.

For example, to draw a triangle whose three corners are at coordinates (1,2), (3,8), and (10,5), you could do this:

```

10 LET XSTART=1
20 LET YSTART=2
30 LET XEND=3
40 LET YEND=8
50 GOSUB 1000
60 LET XEND=10
70 LET YEND=5
80 GOSUB 1000
90 LET XEND=1
100 LET YEND=2
110 GOSUB 1000

```

If you have the 4K ROM, you will not be able to run the Basic program. There is no PRINT AT command in integer Basic. And, if you have only 1K RAM, you probably will not have enough memory. That is because the display file, where the picture sent to your TV screen is stored, can take up as much as 729 bytes—nearly 3/4K.

### Parlez-vous Z80?

Translating the line-drawing routine into Z80 machine code is generally pretty straightforward. Figure 1 shows the translation for a computer with 2K RAM. For

Figure 1. Basic and Machine Code Versions of Listing 1.

```

1000 LET U=XEND-XSTART
3A F4 47          LD A,(XSTART) ;start by subtracting
                  XEND-XSTART

7A             LD A,D ;let's store X1 now
32 FA 47          LD (X1),A
.....
1040 LET V=YEND-YSTART
3A F5 47          LD A,(YSTART) ;now do the same thing, except
47              LD B,A ;with L=N; E=Y1 (and Y2)
3A F7 47          LD A,(YEND)
90              SUB A,B
.....
1050 LET N=ABS(V)
1060 LET Y1=SGN(V)
1070 LET Y2=Y1
1E 01           LD E,1
30 04           JR NC,PLUS2
ED 44           NEG

```

most program lines each Basic statement becomes a short series of machine code instructions. The most complicated of them is the machine code version of PRINT AT.

But at the very beginning, you will see ABS and SGN, a pair of Basic functions we have not translated into machine code before. Let's take a quick look at how our machine code version of ABS and SGN works.

ABS is the *absolute value* function in Basic. Simply put, it means this:

- If X is positive, then ABS(X)=X
- If X is negative, then ABS(X)=-X
- If X is zero, then ABS(X)=0

In other words, you could replace line 1010 in the Basic program with

- 1010 IF U>0 THEN LET M=U
- 1012 IF U<0 THEN LET M=-U
- 1014 IF U=0 THEN LET M=0

SGN is the *sign* function:

- If X is positive, SGN(X)=1
- If X is negative, SGN(X)=-1
- If X is zero, SGN(X)=0

You could replace line 1020 in the Basic program with

- 1020 IF U>0 THEN LET X1=1
- 1022 IF U<0 THEN LET X1=-1
- 1024 IF U=0 THEN LET X1=0

You can see that ABS and SGN work in much the same way. That is why, to shorten our machine code a little bit, we have combined the two functions into one short routine. Here is how it would look in Basic:

- 1010 LET X1=1
- 1012 IF U>=0 THEN GOTO 1018
- 1014 LET U=-U
- 1016 LET X1=-1
- 1018 IF U<>0 THEN GOTO 1022
- 1020 LET X1=0
- 1022 LET M=U

In machine code, it works like this:

When we subtract XSTART from XEND, the zero flag and the carry flag are either sent up or down. Remember, the zero flag goes up if the result equals zero, and the carry flag goes up if the result of a subtraction is less than zero; otherwise, the flags come down. By checking the flags, we can tell whether the number is positive, negative, or equal to zero.

We start with a guess—maybe the number is positive. The sign will go in register D, so we say

LD D,1

Next, we test our guess. If U is negative, the carry flag is up. Thus, we say

JR NC,PLUS1

that is, jump ahead if it is not negative. PLUS1 is just a dummy name; we will have to figure out later how far the jump really is.

If U is negative, we say

NEG

LD D,-1

That changes the negative number in A

Figure 1. Continued.

### WANTED

Serious ZX-81 & T/S-1000 users to try our technical and financial software. All programs are fully interactive and require only that user answer questions when prompted. All programs require expanded memory. All cassettes are high quality and have been 100% tested for load capability. Below is sample of some of our original software programs.

- INLOAN-Investment/Loan Analysis program. Computes either amount, payment, interest rate, or time given any of the other three factors for either an investment or loan.
- IRR/NPV-Internal Rate of Return/Net Present Value analysis program. Computes either IRR, NPV or both for an investment given a series of annual cash flows.
- RENLEN-Renumber/Length utility program. Automatically rennumbers a program in any increment plus lists new line numbers containing GOTO's & GOSUB's with edit changes necessary. Program will also indicate the amount of RAM required for program storage.
- FINST-Financial Statement analysis program. Computes all relevant data & ratios for evaluation of a company's Balance Sheet and Income Statement.

All programs are \$7.95 plus S & H of \$1.95 per order. "Our software doesn't cost more; it just does more."

### STOCK OPTIONS ARE NOT FOR AMATEURS!

COMPETE WITH THE PROS! OUR PROGRAM, COMBINED WITH YOUR 16K ZX81/TS1000 COMPUTER, PROVIDES YOU WITH A POWERFUL TOOL FOR SELECTING PROFITABLE STOCK OPTIONS.

Using a dividend-adjusted Black-Scholes model, this program enables you to make objective strategy decisions on the purchase of put and call options. All that's required is options data easily obtained from current financial publications. Results for each option analyzed are:

- Potential Percent Profit (Reward)
- Potential Percent Loss (Risk)
- Expected Return
- Theoretical Option Price
- Hedge Ratio

Advanced features include:

- Volatility calculation
- Built-in calendar and commission schedule
- Up to seven options per run
- Immediate display/verification of input data
- Full editing capability
- User-selectable ranking of options based on results

The cost? A fraction of similar programs for the Apple and IBM PC. Only \$30 for tape and comprehensive documentation. Documentation only, \$5 (credited to order).

Send check or money order to:

**AIR CAPITAL SOFTWARE**

to a positive value, and makes the sign -1.

Now we are OK if the number is positive or negative. But what if it is zero? The zero flag still tells us whether the result of our subtraction was zero or not. If it is up, we will need to change the sign (in register D) to zero:

```
PLUS1: JR NZ,SKIP1
LD D,0
```

Finally, we will put our absolute value in register H for safekeeping:

```
SKIP1: LD H,A
```

When we are finished, the sign is in register D and the absolute value is in register H.

As usual, translating from Basic to machine code is not really very complicated. Just break the routine down into simple steps—steps that can be performed by something as simple-minded as the Z80 processor—and you are off and running.

### Off and Running . . . Almost

When you first looked at Figure 1, you may have noticed a few other things. This is easily the *longest* machine code routine we have tried—200 bytes long, in fact. And in the far left-hand column, where we would normally put each instruction in numerical codes—the version of the program the computer understands—there is a mixture of numbers and letters. What goes on here?

Because this routine is 200 bytes, it is not practical to POKE in the whole program each time you run it. To get around that problem, we will get the computer to do the work. The program in Listing 3 expects its first line to be a REM statement containing the numerical version of a machine language program. It converts the characters in the REM line into values between 0 and 255, and then POKES them into memory starting at location START.

But instead of decimal numbers, this time the numerical codes are in base 16, or hexadecimal numbers—"hex" numbers for short.

### Putting on the Hex

There is a chapter in your ZX81 or TS1000 manual that tells something about hex numbers—it is titled either "Counting" or "Number Systems," depending on which edition you have. It explains how hexadecimal numbers use all the digits from 0 through 9, and the letters A, B, C, D, E, and F as well. If you have not looked at it before, be sure to read it.

But even more important for machine code programming is the "Character Set" appendix. It has all the machine code instructions, along with both the decimal and hex numbers the Z80 processor understands. That makes it very easy to translate a number between decimal and hex—you can just look in the appendix.

Why use hex numbers this time? To

save space. Notice that every hex number up to FF (in decimal, 255) can be written with exactly two digits. That means each pair of digits is one number. You can

### Listing 2.

#### 8K ROM

ART AT ";RT
150 PRINT "PRESS NEWLINE TO RES
ERVE SPACE"
160 INPUT A$
170 LET A=USR(16428)
```

cram them together with no space between, and then easily break them up into pairs again. For example, it is easy to see that

210000C9

means the same thing as

21 00 00 C9

You cannot do that with decimal numbers. Some decimal numbers have one digit, some two, and some three. Suppose you left the spaces out of this sequence:

6 173 22 2 201

If you did not already know what the

"It says the odds of you making that hand are 2,385,000 to 1, and the odds are 3 to 2 that a nut like you will try for it."

original numbers were, you would never be able to re-create the original sequence from

617322201

Of course, you *could* use zeroes to make each number three digits:

006173022002201

But then our 200-byte routine would fill up a REM line 600 bytes long. That is a lot of memory to take up if you only have 2K. With two-digit hex numbers, it only takes 400 bytes, or two-thirds the space.

There is another advantage to using hex numbers. Most machine code listings

25 INPUT START

```

in magazines and in many of the books on machine code programming are in hex numbers rather than decimal. So once you have the hang of hex, it is much easier to understand those books and articles—and use the machine code programs they describe.

**Quick Draw**

To use this machine code line-drawing routine, very carefully type in the program in Listing 3. (It is designed for an 8K ROM computer with 2K RAM; be sure to

use the alternate REM line if your computer has 16K.) Count the number of characters in the REM line after you have typed it in, to make sure you have not missed any—or better still, check the whole line to make sure it is right.

Now—before you try the program—SAVE it on tape! If you have made a mistake, you will be able to edit just the REM line to correct it, instead of typing the entire program again.

Next, use the program in Listing 2 to save space at the top of memory. For this routine, you should save 212 bytes: 200 for the program, and 12 for the variables.

**Listing 4.**

```

10 LET Q=PEEK 16388+256*PEEK
6389
20 FOR A=1 TO 22*32
30 PRINT " ";
40 NEXT A
50 INPUT XSTART
60 POKE Q+200,XSTART
70 INPUT YSTART
80 POKE Q+201,YSTART
90 INPUT XEND
100 POKE Q+202,XEND
110 INPUT YEND
120 POKE Q+203,YEND
130 LET A=USR (Q)
140 GOTO 40

```

**4K ROM Changes**

```

10 PRINT "START LOCATION?"
14 INPUT Q
18 CLS

```

Then LOAD the program you have SAVED on tape, RUN it, then edit out each of the program lines. Finally, type in and RUN the program in Listing 4. It demonstrates the line-drawing routine. If your computer has SLOW mode, it will leave no doubt how much faster than Basic machine code can be.

**Coming Attractions**

A machine code routine like this one is fast—but it is also long. Everything the routine does must be included in the program, and sometimes that means “reinventing the wheel.” After all, there are already machine code routines for printing on the screen, plotting points, and many other functions already in your computer—stored in the ROM.

Next time, we will see how to put those routines—the “ROM calls”—to work. We will also learn about writing our own subroutines, when there is nothing in ROM that does exactly what we want. And we will take a look at the “stack,” and some of the special features of the Sinclair computers.

If you have comments or questions about machine code programming, or something is not quite clear, let me hear from you. Be sure to send along a stamped, self-addressed envelope if you need a reply. ■

# The ZX Stock Exchange *Donald A. Burgio*

You have just inherited \$10,000 from a wealthy uncle who made it big on the stock market. He also gave you the modem number of his broker, a computer.

The ZX Stock Exchange carries stocks listed on the New York Stock Exchange as well as stocks not listed there. For the purpose of demonstrating how the market works, a random selection of stocks of five stocks has been made and entered as three letter abbreviations: AAA, BBB, CCC, DDD, EEE. When you enter the program, you may substitute the stocks that you believe have the greatest potential. However, you must use designations

Your broker the computer charges you a modest one percent brokerage fee on all transactions made.

## Getting Started

First, carefully type in the program in Listing 1. Save it by typing GOTO 2760. This will cause it to run automatically after LOADING.

When the program is running, the first thing the computer will ask is whether or not you want instructions. Regardless of whether you get instructions, press S to begin.

Figure 1 shows the initial printing of the stock: the name, initials, price per

price per share, your holdings (the number of shares in your portfolio), the total value of the stocks, and the change from the previous day. The next lines will be any messages, the ZX Stock Exchange average, the net change, and the value of your stock, cash, and total assets. You will then be asked whether you want to continue. Type Y for yes and N for no.

## Program Description

Lines 10-120 and 230-830 initialize the program and give instructions if requested.

The subroutine in lines 130-220 is frequently used for formatting. A cash value

of three letters. You must also put in the full name of each in lines 890, 920, 950, 980, and 1010.

The stock prices are generated somewhat randomly, but they show short and long term trends just as on other stock exchanges. To get the "feel" of the market, the program should be played for at least 10 market days.

Donald A. Burgio, 20 Oak Rd., Congers, NY 10920.

share. Your stock, cash, and total assets will then be briefly shown.

Next the computer will ask you for your transaction for each stock. To buy, type xxx, where xxx is the number of shares you want to buy. If you do not want to buy or sell, type 0.

After you have entered your initial transactions, the screen format will look like Figure 2. At the top will be displayed how many days you have been playing. Then a chart will show the stock initials,

such as 23.6 is inputted as G. The subroutine will then manipulate G so that it comes out as a neater form stored in R\$, 23.60 in the example. The length of R\$ is stored in L for neatness by lining up the decimal points on the cash amounts.

Line 190 takes care of a peculiar happening on the ZX81 which is due to the nature of floating point arithmetic. E.g., type PRINT 1012.56-INT 1012.56 or PRINT 1012.56-1012. The computer should print .56, but instead it prints

0.55999994. This happens with a few other numbers also, and it must be accounted for in software.

Lines 840-1010 set up the initial display shown in Figure 1. Lines 1012-1180 calculate the stock exchange average (EA) and net change (NC). Lines 1190-1320 print your stock assets (SA), cash assets (C), and total assets (D).

Listing 1. The ZX Stock Exchange.

Figure 4. List of Variables.

Variable	Function
A\$	the function INT (RND*4.99)+1
A	trend slope + sign
B	formatting: INT X (dollar amount)
BC	big change constant (-4,0,4)
BF	brokerage fee
C	cash assets
CT	cash total (temporary)
C(I)*	change in stock value
D	total assets
DY	current simulation day
DP	total day's purchases
DS	total day's sales
D1	SPS**
D2	SPS**
E	formatting: Cents amount
EA	exchange average
F	0 = first simulation day
G	formatting: initial cash amount
I\$(I)*	Stock initials
L	length of R\$ (for lining up decimal points)
N\$	user's name
NC	net change
O\$	formatting: the final cents amount
P	SPS**
P2	SPS**
P(I)*	number of shares in user's portfolio
R\$	final formatted cash amount
R	random value
S	SPS**
SA	stock assets
S2	SPS**
S(I)*	stock values
TA	total assets
TT	total transaction amount
TR	number of days in the trend
T(I)*	transaction amount
X	formatting: ABS G
Z\$	formatting: STR\$ B, general input

\*1 = AAA      \*2 = BBB      \*3 = CCC      \*4 = DDD      \*5 = EEE      \*\* Stock price subroutine; see text.

Lines 1330-1470 ask if you want to continue. If the answer is Y (yes), the program then asks you to input your transactions.

Lines 1480-1750 make sure that you have not spent more than you have and that you do not try to sell more stock than you own. The brokerage fee (BF) is calculated at line 1640.

Lines 1760-2000 set up the screen display similar to Figure 2. Lines 1940-1990 randomly split stocks (i.e., doubles the number of shares you presently have) and declares dividends.

The subroutine that makes the stock prices is located in lines 2010-2500. D1 and D2 are random numbers of days which respectively determine when stock S will increase 4 points and when stock S2 will decrease 4 points. If D1 days have passed, it picks a stock (S), sets P, and determines a new D1. This is done similarly with D2, S2, and P2. If D1 or D2 days have not passed, the change is determined using the trend sign and slope (A), which is changed after TR days, and a random amount (R) less than \$1.

The conclusion is contained in lines 2510-2750. Lines 2760-2780 save the program so that it RUNs automatically after LOADING.

For the benefit of those who are interested in programming techniques (and for those who want to "fix the game to their advantage," a euphemistic phrase for "cheating"), a list of the variables is found in Figure 4.

Line notes:

390: G (6), THE ZX STOCK EXCHANGE in inverse, G (5).

400: F (6), THE ZX STOCK EXCHANGE in normal letters, F (5).

760: WELCOME TO THE ZX STOCK EXCHANGE in inverse.

2700 and 2720: Inverse \$ (32).

## ZX81 MACHINE CODE?

### NEW! ASZMIC PLUG-IN EXTERNAL BOARD

accepts the Aszmic Rom to combine the best of machine code and basic. 24 I/O lines, Eprom programmer, 8k user socket.

Aszmic alone, \$52—including comprehensive manual.  
Aszmic + Board + Manual, only \$73  
USA dealer enquiries welcome

ZX.ASZMIC ROM gives:

- full screen editor
- multiple files
- powerful assembler
- complete debug
- hi-res graphics

ZX.Aszmic Rom replaces the Basic Rom in Timex 1000 and ZX81/80 computers to transform the machine into a complete Assembly Language Development station. Fast. Powerful. Professional. Reliable.

# Using the Byte-Back Modem *Tom Keeney*

## Introduction

Since buying my Sinclair ZX80, I have made so many changes that it is hardly recognizable. One of the most satisfying has been the addition of an RS232 interface and a modem.

I have had a longstanding and probably irrational interest in data communications. Exchanging data between machines opens up the prospect of electronic mail and banking. The individual can also access large data bases such as Compu-serve, Dow Jones, and "The Source." I find this an exciting look at what I hope will be the future.

All that is needed is a device called a *modem*. It is available from Radio Shack for about \$150. Unfortunately, most modems will not work on a Sinclair because they require something called an RS232 interface.

## The Byte-Back Modem

When I saw that the Byte-Back Co. was offering a modem that would attach directly to the Sinclair, I wasted a few milliseconds in debate and then ordered one. I was even more pleased when I learned that not only did the system include an RS232 interface, but that its services were available to me for other purposes.

The Byte-Back modem is a fine device. It works well and actually does more than advertised. The instruction manual, on the other hand, in its attempt to furnish operating instructions, assembly instructions, and engineering data, is a bit sketchy. A description of the non-standard output on the RS232 board is not given nor is there much in the way of checkout procedures.

This article attempts to provide some of that missing information as well as to give a review of my experience with the product. I also recommend V. B. Rice's fine article which describes his homebrew RS232 interface as a source of additional information on the subject (*SYNC* 2:6).

## Bytes, Bits, and BAUDs

Before useful information can be exchanged, a common communications mode must be established to satisfy the needs of the communications media. This is the function performed by the modem, its interface, and the associated software.

First, it is necessary to transform the internal character set used by the Sinclair into the ASCII character set used by

everyone else. Since the system must both transmit and receive, this transformation must go both ways. Character transformation and control of the interface hardware is the function of the software.

When the data is organized into ASCII codes on the Sinclair data bus, the data must be communicated to the modem. This is the function of the interface. An interface is required because the data on the Sinclair edge connector is arranged on eight parallel wires while the telephone uses only one. This means that the computer can operate on eight signals or bits at once forming a byte. The telephone system, on the other hand, must take those bits one at a time. It is necessary to trade space for time by arranging the data bytes into some agreed upon serial order. It is also necessary for the interface to control the serial transmission rate or BAUD rate. This conversion from parallel to serial is old hat for the Sinclair since that is the method it uses to generate a TV picture and write to the cassette.

The problem is that the TV and cassette interfaces are specific to the Sinclair alone and connect only one specific device. The importance of the RS232 interface board is that it performs the proper conversion and generates the proper control functions according to a widely supported industry standard set by the Electronic Industries Association (EIA). For the price of a modem alone the Byte-Back system is not only a modem but also a generalized serial input/output (I/O) port that will allow the attachment of numerous peripherals to the Sinclair.

The port operates asynchronously. This means that the timing between characters is not controlled, while the timing within a character is. It supports all normal data transmission rates (as shown in Table 1). It also supports 5 to 8 bit per

Table 1. Clock frequency straps and mode instruction data bits used to select the BAUD rate.

Straps	Mode instruction Data bits	BAUD rates			
		D0	1	0	1
		D1	0	1	1
		+1	+16	+64	
A	9600		9600	600	150
B	4800		4800	300	75
C	2400		2400	150	37.5
D	1200		1200	75	18.75

# Anyone with some electronic assembly experience should have little trouble although some dexterity is required as the boards are packed.

directed by an "exception." Since I do not have the resistor color code down cold and I was not sure I could identify the rest of the parts, I found myself paging back and forth between the parts list (where some parts identification information is given) and the "exceptions" sheet (where additional parts identification is made). I also found that it helped to check the components off on the parts list as they were installed.

The assembly presented no surprises, and I was able to put the kit together in about 6 hours. Anyone with some electronic assembly experience should have little trouble, although some dexterity is required as the boards are packed and the traces are close. I found a 25 watt soldering iron with a .1 inch grounded tip to be essential. Those with no experience in kit building whatsoever would probably find the assembled version worth the extra cost.

Figure 5. Expansion connection.

Finally, the warranty and company attitude should be mentioned as they are of distinct advantage to the kit builder and computer hobbyist. The warranty is for the usual 90 days, but it is unique in that it applies to the kit as far as parts and factory defects are concerned. It does not apply if the kit is assembled wrong. It remains valid even if you attempt to repair any malfunction yourself! As an additional aid to the kit builder, the chief engineer answers the phone on evenings and weekends when most of us are working on our projects. As my kit came with a defective chip (which was immediately replaced), I came to value this service. I found him to be patient and helpful. Most of the troubleshooting and checkout hints in this article are his.

## The RS232 Board

Assembly of the RS232 board presented few difficulties. The major point of interest was the expansion plug (J1 on Figure 1).

Having assembled several kits using the same type of expansion interface as Byte-Back, I have found it almost impossible to get a reliable solder joint on the male side of the connector unless the wire wrap pins are bent as shown in Figure 5. This is accomplished by grasping the pin with needle nose pliers, holding the pliers at right angles to the board and moving the tip parallel to it. The result should be a pin bent in the shape of a crank as shown. Simply bending the pins toward the expansion board to form a V with the board in the middle will not give enough surface area to insure a secure solder connection as the board is bent and flexed during installation.

When the RS232 board is completed, it can be checked out and proper operation verified before connecting the modem. This requires a minor hardware modification. The following procedure was developed after conversation with the chief engineer at Byte-Back and involves getting the board to talk to itself. This is easy because it operates in full duplex mode (it can send and receive at the same time) all that is necessary is to interconnect the pins on J2 as shown on Table 2.

Table 2. Pin assignments for checkout.

Pin	Pin	Remarks
10	16	Serial data input to RS232 level translator.
3	9	RS232 transmitter to RS232 receiver.
8	15	Grounds the clear to send pin on the 8251A.

The easy way to do this is to build a turnaround plug by connecting the appropriate pins on a blank 16 pin DIP header (Jameco # 16pinHP) as shown in Figure 6 then do the following:

1) Insert the test plug into J2 and attach the RS232 board to the Sinclair edge connector.

Figure 6. Turnabout plug.

2) Turn on the Sinclair and look for smoke. Do not worry, the board is fully buffered and has its own power supply so it is almost impossible to hurt the Sinclair if a mistake is made on the RS232 board.

3) If nothing is obviously wrong, key in the program given in Listing 1 and record it.

Listing 1. Turnabout test.

```

10 POKE 39,122      60 IF A =I THEN GOTO 100
20 POKE 39,23       70 PRINT "FAIL"
30 FOR I= 0 TO 127  80 STOP
40 POKE 38,I        100 NEXT I
45 PAUSE 2          110 PRINT I

# Get the most from your SINCLAIR or Timex Sinclair with these practical books from Sync!

**The ZX81 Companion**  
by Bob Maunder

*The ZX81 Companion* follows the same format as the very popular *ZX80 Companion*, and assists the ZX81 or Timex Sinclair 1000 user in four applications areas: graphics, information retrieval, education and games. This practical guide contains scores of fully documented short routines plus complete programs and a disassembled listing of the ZX81 ROM Monitor.

"Thoughtfully written, detailed, and illustrated with meaningful programs."  
—MUSE

5½" x 8", Softbound. #17P \$9.95 (\$2.00)

**Getting Acquainted With Your ZX81**  
by Tim Hartnell

This informative volume for the new ZX81 or Timex Sinclair 1000 user contains more than 80 programs to help the reader get the most from his Sinclair computer. Game programs include Checkers, Alien Imploders, Blastermind, Moon Lander, Breakout, Star Burst and Derby Day. The book also shows programs for cascading sine waves, plotting graphs and tables, data sorting, equation solving, plus the use of PLOT, SCROLL, PRINT, TAB, PEEK, POKE and much more!

5½" x 8", Softbound. #15Y \$9.95 (\$2.00)

**The Gateway Guide to the ZX81 and ZX80**  
by Mark Charlton

*The Gateway Guide* is a practical programming manual for the beginner that furnishes over 70 fully documented programs. The majority of the programs have been written for easy conversion from machine to machine (ZX81 or Timex Sinclair 1000, 4K ZX80 or 1K ZX80). *The Gateway Guide* describes each function and statement, illustrates it with a demonstration routine or program, and combines it with previously discussed material to help you understand your computer.

5½" x 8", Softbound. #160 \$9.95 (\$2.00)

**Computers for Kids (Sinclair Edition)** by Sally Larsen

This new edition of *Computers for Kids* is written specifically to introduce children aged 8 to 13 to the ZX81 or Timex Sinclair 1000. The book requires no previous knowledge of algebra, variables or computers, and it enables a youngster to program a Sinclair in less than an hour. There's also a section for parents and teachers. "*Computers for Kids* is the best material available for introducing students to their new computer."

—Donald T. Piele, Professor of Mathematics,  
University of Wisconsin-Parkside.

8½" x 11", Softbound. #12S \$5.95 (\$1.00)

4) Run the program in SLOW mode unless the PAUSE in line 45 is increased to 10 (this is important if a ZX80 without a video upgrade is used). In SLOW mode the screen should flash 128 times then the number 128 should appear, after which the screen should start to flash again. If the word FAIL appears at any time, the board is defective and either troubleshooting or factory service is in order. The program can be stopped at any time by pressing the BREAK key, but, if it is restarted or executed a second time, it should always be with a RUN 20 or GOTO 20 unless the power has been interrupted.

The first few lines of the program establish the data communication mode and turn on the board's transmitter and receiver. The signal timing and error checking system to be used are also set at this time. The rest of the program transmits codes from 0 to 127 to the receiver, checks the receiver output to see if it matches what was transmitted, and sends the next code if it does. Only 128 codes are sent because the mode instruction in line 10 established a seven bit data code with one parity bit (the eighth) for error checking and only 128 codes can be sent with 7 bits.

### Modem Assembly and Checkout

Assembly of the modem presented few problems largely because the instructions were more or less step by step, unlike the instructions for the RS232 board. It is worth noting, however, that the company tacks an extra charge on to any repair if the components have been mounted "face down" so that the values are not visible. This is the first time I have seen this, but it does motivate good assembly practice.

The modem is attached to the interface by plugging the projecting wire wrap pins on interface plug J2 into J1 on the modem as shown in Figure 7. Care should be exercised as the

pins are long, may not be properly aligned or straight and are easily bent. Orientation of the heat sink on the interface is important because it and transistor Q7 on the modem establish the space between the two boards. I know from experience that modem components, particularly the transformer and crystal, will short out the RS232 board, producing expensive odors. Byte-Back has recently included a case for the unit. I wish I had one.

Figure 7. RS232 interface with piggyback modem.  
(Note: Modular plug: Radio Shack 279-375.)

Connecting the modem to the telephone service may be a problem although adequate instructions are given and the newer units come with a modular plug. It is a good idea to disconnect the modem from the telephone when not in use, particularly in those parts of the country where electrical storms are common. Since a telephone must be used for dialing and answering, a duplex jack (Radio Shack # 279-357) should be used, and the phone connected in parallel with the modem.

It is not necessary to subscribe to a computer service to check out the modem; all that is needed is a telephone number. Of course, the service will evict anyone who cannot produce a password at the proper time but most computer services are patient and enough communication will take place during the login attempt to verify proper terminal function.

Since Byte-Back software is configured at the factory for communication with CompuServe, I decided to visit them for checkout. To get the local CompuServe number I called (800) 848-8990 and asked for a local number in my area. Since CompuServe does not have a local number everywhere, I was also prepared to use the University of Alabama at Huntsville (UAH) bulletin board at (205) 895-6749 (ring once, call back within 40 seconds). Many universities maintain such services. So do many computer clubs. It should be understood, however, that these are amateur systems and they crash a lot, so do not get discouraged.

With the modem plugged into the telephone line and a valid telephone number the system is ready for checkout. This is done by the following steps:

- 1) LOAD the modem software into the Sinclair.
- 2) Make sure that the computer is in the SLOW mode (the software will not work on a ZX80 without a video upgrade).
- 3) RUN the program and answer the prompts by entering "O" and "N" for originate and echo. In a few moments the words "BYTEBACK INC. GLASS TTY" will appear on the screen, indicating that the system is standing by waiting for an answer tone from another modem.
- 4) Dial the host computer. When it answers, its modem will generate an answer tone (2000Hz). This will be followed immediately by the originate tone (1000Hz) from the Byte-Back unit. If this occurs, the unit can be considered at least partially functional.

**ZX-MAN**  
Turn your **ZX81** or **TIMEX SINCLAIR 1000** into an arcade type game computer with **ZX-MAN**. 100% machine code makes this fast acting program as much fun as being at the arcades. With the joystick option you can have the real feel of game playing never before available for your **ZX81** or **TIMEX SINCLAIR 1000**. 16K required..... \$14.95

# My dog barked. Then the host computer filled my screen with garbage and hung up!

5) Do not hang up the phone at this time! Either wrap the receiver in a towel, smother it in a pillow or, if it has a modular handset, remove the handset plug from the telephone base. This is important! Once when I was on line to CompuServe, my dog barked, causing the host computer to fill my screen with garbage and hang up.

6) After the two modems exchange tones, the host will immediately start sending a message that will appear on the screen. If the message is in clear English text, the system works, and communications have been established! Go out and celebrate. If assorted jumbled characters, try PEEKing the mode instruction to make sure that the configuration matches that required by the host.

## What Will It Do?

The Byte-Back modem system as delivered will convert the Sinclair ZX80/81 into what is popularly known as a "dumb terminal." Also it furnishes the capability to connect that terminal to a host computer via the telephone. As with most "dumb terminals" the user can dial up a properly equipped remote computer, command it to execute programs local to it, and receive the results on the TV attached to the Sinclair.

With the software supplied, the only way to retain the output is to halt the terminal program, reenter Basic and COPY the screen to the printer (if one is available). If this is done, however, the remote site may hang up the phone. Also

it is not possible to "download" or copy software from any remote site, even another Sinclair. Having examined the terminal software (available from Byte-Back) for \$10 and probably worth it, I have good news: the limitations mentioned are not in the hardware. I should point out that the software works well; it is just limited, but then so is the cost.

Since I have installed my modem, I have used it to communicate with several systems. I have been able to command the execution of Fortran and Cobal jobs on the large mainframe computer where I work. An example of this is shown in Figure 8a; sample output is shown in Figure 8b. This program was executed about 15 miles from my home, both the listing and the output were COPYed on my Sinclair. Yes, I am running Fortran jobs from a Sinclair computer.

On a more mundane level I have exchanged notes with Apple, Atari, and other computer owners on the bulletin board at the University and determined on CompuServe that it was raining in Brazil. A complete listing of what is available out there in "computerland" is beyond the scope of this article, but one thing I have enjoyed is the encyclopedia research service that several large systems offer. Just enter the subject, and within a few seconds the complete encyclopedia article appears on the screen!

After some experience, I feel that the larger systems are easier to communicate with. The Sinclair is definitely limited in some respects, and it helps to deal with a system that has enough capability to adjust. Things like page size, interrupt and abort codes often need to be negotiated, and most of the major services can. For example, I have found it helpful to direct the host to send upper case characters only. The Byte-Back software can deal with any incoming ASCII code, but it converts lower case into inverse video. This results in a display that looks a bit like a ransom note, and it is hard to read (Figure 9).

The modem software will LOAD in 2K. The price of the Byte-Back kit is about \$120. The TS1000 now costs less than \$70 (even as low as \$50). So for less than \$200 you can command the resources of a computer that costs in excess of \$16 million! That ought to satisfy anyone's power hunger!

If I have inspired you to share my disease and get into data communications with your Sinclair, give me a call on the UAH bulletin board and leave me a message. I would like to hear from you. ■

Figure 9. Author's ZX80 on line to CompuServe. (Note: The telephone handset is unplugged.)

# 3D Monster Maze and Mothership *David Grosjean*

In *3D Monster Maze* you are in a maze running from T. (Tyrannosaurus) Rex. The object is to get out alive!

The game begins with a circus barker telling you the background of the maze. He then gives you the choices of seeing the instructions, quitting, or starting. The computer takes less than 30 seconds to set up the maze, and then the action begins.

You are walking (or running) down a corridor which has dark black walls, while the corridors branching off your path have grey walls. Messages at the bottom of the screen give you reports such as "He is hunting for you," "Rex has seen you," and "RUN he is beside you." Each step increases your score by 5 points. When you reach the exit, you are awarded 200 points and put in a new maze. The

instructions do not tell you what the exit looks like, but, when you see it, you know that you have escaped.

The game is very easy to get used to, but it is difficult to win consistently. The controls are simple: the arrow keys are used to indicate left, right, and forward (up).

The program uses Basic and mostly

machine code (to produce and move the pictures quickly). Although the pixels on the TS1000 are rather coarse, the 3-D simulation is marvelously effective. The illusion of a corridor with extension is created by converging lines, and Rex gets larger as he gets closer. The simplicity and speed of this program make it fun for all ages.

David Grosjean, 50 Kings Rd., Chatham, NJ 07928.

## PERSONAL WEALTH ACHIEVER

DO YOU KNOW THE WAYS TO BUILD VAST WEALTH WITH A MINIMUM OF TIME AND EFFORT - AND OFTEN LITTLE CAPITAL?

MOST PEOPLE THINK THEY ARE TOO BUSY MAKING MONEY TO EFFECTIVELY MANAGE IT; THEY MISTAKENLY BELIEVE THE PROCESS OF WEALTH ACCUMULATION IS COMPLICATED, MYSTERIOUS, AND TIME CONSUMING. AS A RESULT THEIR NET WORTH IS ONLY A FRACTION OF WHAT IT COULD BE, AND THEIR FINANCES ARE IN A STATE OF CONFUSION.

PERSONAL WEALTH ACHIEVER IS A 16K, MENU DRIVEN PROGRAM THAT WILL HELP YOU INCREASE INCOME AND NET WORTH WITH LITTLE TIME, EFFORT, OR RISK. THIS INTER-REACTIVE PROGRAM HELPS YOU, STEP BY STEP, TO GET FINANCES UNDER CONTROL AND TO EXPAND YOUR EARNINGS CAPABILITY. PROVEN WEALTH ACCUMULATORS, WITH GRAPHIC DISPLAYS, WILL HELP YOU TO GAIN FINANCIAL INDEPENDENCE. THIS PROGRAM COULD BE WORTH A FORTUNE TO YOU!

## SYNC

### Software Profile

**Name:** 3D Monster Maze

**Type:** Arcade game

**System:** 8K ROM; 16K RAM

**Format:** Cassette

**Summary:** Remarkably effective 3D simulation with a fun game. Rex is after you!

**Price:** \$14.95 plus \$2 s&h per order.

**Manufacturer:**

Melbourne House Software  
Dept. CS, 347 Reedwood Dr.  
Nashville, TN 37217

*Mothership* is a space combat game with a 3-D simulation. The top half of the screen shows the stars of outer space in a stationary background while the bottom half shows a trench (somewhat like the one in *Star Wars* when the Death Star is destroyed). You are in your fighter flying down this trench. Your controls (left, right, up, down, and fire) are easy to get used to. The illusion of depth comes from the use of converging lines to show the trench, and the illusion of flight from the constantly changing display.

## SYNC

### Software Profile

**Name:** Mothership

**Type:** Arcade Game

**System:** 8K ROM; 16K RAM

**Format:** Cassette

**Summary:** A challenging game and excellent use of graphics make this a superb game and a lot of fun.

**Price:** \$16.95.

**Manufacturer:**

Softsync, Inc.  
14 E. 34th St.  
New York, NY 10016

At first you are fighting drones which emanate from the huge mothership seen cruising back and forth across the top of your screen. They fly towards you while shooting, or they simply fly at you on suicide missions. The drones are worth from 100 to 500 points depending on where you are in the corridor. The higher up in the corridor you are, the more the drones are worth, and the faster everything moves. After shooting ten drones without losing one of your ships, the drone attack stops, and the mothership begins shooting at you. You must hit it three times before it is destroyed. You are awarded from 1000 to 5000 points depending on where you are in the corridor.

There are three levels of difficulty. In the first, the drones do not shoot at you. In the second, the drones do shoot at you. The third level is just like the second except that it is much more difficult. You do not crash if you hit the sides of the corridor in the first two levels, but you do in the third. Up to two people can play individually.

This game is simple, yet it can get very difficult. The speed, smoothness, and excellent use of graphics make this a

superb game and a lot of fun.

It is not surprising then that *Mothership* is one of the five award winning programs in the Timex Sinclair category at this year's Consumer Electronics Showcase and that it is the only U.S. software package bought by Sinclair for British distribution. Three other Softsync entries are also among the five award winners: *Mazogs* (reviewed in *SYNC* 2:6), *Quest for the Holy Grail*, and *TS Destroyer*.

# Brick Buster *Paul Thomson*

Figure 2. Machine code listing.

"Brick Buster" is a game in which the player earns points by knocking out as many of the bricks in the playing area as possible. On-screen scoring and a high score memory are provided for competitive playing. The active part of the game is written in machine code for fast action. The rest of the game is in Basic for ease of programming.

Using the machine code loader program in Figure 1 (or your own program, if you prefer), enter the machine code from

Figure 1. Machine code loader.

## ScreenMate

ScreenMate's Lightpen and InterFace for the Atari® Joystick adds versatility to your ZX81 or TS1000.

- Play Action Games
- Direct Interaction with the TV Screen.
- Features a "Piggy-back" Add On Feedthrough
- Draw and Doodle
- Ideal for Educational Programs
- Independent of Keyboard

**\$39.95 includes**

- Lightpen with Joystick interface
- User Guide • 90 Day Limited Warranty
- All Postage and Handling

**NEW! ScreenMate Program Cassette**

**\$9.95 includes**

- Draw • Doodle • Math Quiz • Master Mind
- Tic-Tac-Toe • Word Scramble • Break Out
- States • Safe Cracker

Next, enter the Basic part of the game. Enter the lines in Figure 3 over the first program. Be sure to leave the REM statement alone. Make sure you enter the Basic just as in Figure 3. The line notes will help.

After the Basic part of the game is entered, you are all set to play. Again to be safe, SAVE the whole program now by typing RUN 500. When you LOAD the program to play again, it will start running by itself. After it is LOADED, the computer will ask you to enter the speed of play. Five or greater is suggested for the beginner. After you enter the speed, the playing field is drawn. You have 5 balls per game. You serve the ball by pressing S. The paddle is controlled by the 5 and 8 keys. Each brick is worth 10 points. At the end of the game, if you have the highest score so far, you get to enter your name which will stay in memory until your score is beaten or the program is stopped.

Line notes:

70: 3, zero (4), 6 (26), 4.

90: 8, 5.

120: A (32).

190: Space (32).

280: In inverse: PRESS "P" TO PLAY AGAIN.

## BUY A BANANA™. SAVE A BUNCH.

Meet the Banana™, the very tough, versatile, portable, and reliable dot-matrix printer from Gorilla™.

At \$249.95 retail it's an ideal and inexpensive companion for personal computers like Apple® (or Apple "look alikes" such as Franklin® or Albert®), TI® Commodore®, TRS-80®, Kaypro®, Timex®, Osborne®, etc.

After that, it's merely comparable to other printers that can cost up to three times as much: 10" carriages (to handle standard 9½" paper), 80 columns, graphics capability, 10 characters per inch (expandable to 5 cpi) draft-quality print (for perfectly acceptable form letters, data processing,

business reports, etc.) tractor feed (for precise alignment and quick loading), parallel or serial interface (take your pick), self-inking ribbon cassette (for long life and easy installation), 10 portable pounds in weight, and compatibility with so many of the most popular personal computers on the market.

Plus its printhead features a unique single-hammer design that eliminates a lot of moving parts, to eliminate a lot of annoying repairs.

That's the Banana: silly name, serious service. It's everything the expensive dot-matrix printers are . . .

Except expensive.

Marketed exclusively by Leading Edge Products, Information Systems and Supplies Division, 55 Providence Highway, Norwood, MA 02062. Dealers: Call toll-free 1-800-343-8413; or in Massachusetts, call collect (617) 769-8150.
